Congratulations on a great deal!

At an estate auction there were several unadvertised pieces of amateur radio equipment. I got a working National HRO500 for $25.00 but passed on a Kenwood TS840 that someone else got for $50.00

Mr. Whittington may know a hundred people whom he doesn't like very well, and some of them might actually be his enemies, but it's doubtful even ONE of them has ever shot him in the face with a shotgun!

His "friend" VP Dick Cheney did just that and the government (?) HID the fact for over 24 hours - until the owner of the ranch on which the accident occurred called the Corpus Christi Caller-Times.

Check out http://www.foxnews.com/ for more details.

Question: Could this be the beginning of another attempted "gun grab?" . . . "If this can happen with an avid hunter who is experienced, cautious, etc., etc., [ad infinitum] just imagine the training (translated hoops) that should be required for a "novice" to get a hunting license. Better still, it could be used to even try to get people to register - or surrender - their "sporting guns!"

Time will tell!

*** Someone will ask, "What does this have to do with Shortwave Radio?" The answer, listen to The Power Hour tomorrow and see. Joyce will not be the only one to report on this!!!! ***

I haven't been hunting in many years,so I do realize if I was to start going hunting again,I should and I would first go to a fireing range and get plenty of practice.Why? main thing is because I wouldn't want to accidently shoot a fellow hunter.A hunter with a bad aim can be very dangerous to fellow hunters and fellow non hunters too.

According to the 2006 Passport blue page schedule
Radio Trans Mundial, Santa Maria.
Language "other" and transmitting 50 Kw.

According to ILG data they are broadcasting in Portuguese on that
frequency. Transmitter location Santa Maria-Camobi at 50 Kw.

Sometimes its just that you notice something like a certain model of car
and you start seeing them everywhere you go but it seems to me tuning
around the bands in the last couple of days the reception of south and
central American stations has been better then usual.

Here is a good example of liberals taking advantage of an accident to be
deliberately cruel. One of these days people of this low caliber will
figure that they in fact win no political points saying crap like this
in the media. Even if I was anti-gun rights this would cause me to not
support their politics.

Actually that should be Radio Nova Visï¿½o which RELAYS Radio Trans Mundial. Radio Nova Visï¿½o is generally off frequency. Last heard here by myself on 11734.9, July 26, when Zanzibar was off.

If you have a link to an example then post it. I'm not aware of someone
in the Republican party making light of a person getting shot or trying
to score political points from an unfortunate shooting accident
resulting in injury but if they did I would not support them either.

When people talk trash like this even if you believe in their cause you
should find someone else to support that cause.

Well I guess we did make fun of John 'Fraud' Kerry due to his tossing a grenade into some containers of rice that were on a small boat in a river in Vietnam. The grenade went off, and he got some rice in his ass and then he put in for one of his many Purple Hearts for that incident.

Not quite a hunting accident, but you get the idea.

OK so this amounts to writing some crap on Usenet. People here are not
running a foundation for a political cause or running for office. The
Brady's are public figures and people that sink that low should not be
supported by anyone.

Seriously would you as a public figure say something over the top like
this?

and tell them that their two transmissions of the BBC on 5975 and 5995 at 0300 UTC are somehow getting mixed together. Tonight they were about equal strength on 5975-so much so that I finally gave up after trying both LSB and USB. Normally I have to use SSB just to listen to BBC English. This isn't my radio, or a vagary of the atmosphere-it's occurring at the transmitter as far as I can tell. I don't have any way to make a wav of the signal or else I'd write them myself. Maybe somebody else could make a wav of this and email it to them?

I'm all for private ownership of guns. I used to do small bore target shooting in school. What I am against is stupidity, whether in public office or at a quail hunt. Perhaps Cheney mistakenly thought it was a QUAYLE hunt..

I remember hunting pheasant back in Wisconsin when I was a kid. The fist time I went three of us were walking into the designated hunting area. (Pen raised birds. some of em ya had to kick to get em to fly - heheh.) So this bird takes off and the three of us get our guns up on it and BOOM BOOM BOOM. It's feathers. So we seperate and a few minutes later I got a bird sweeping across the field in front of me. I raised my gun up, got on it, and got it good. There was a guy standing right under it when I let the lead fly. He ducked - a smart move.

The point here is that it is easy to get shot when you are hunting. Forget about stupidity being a factor, because the part of your brain that does your thinking and reasoning just isn't working anymore. You are relying on instincts to get the gun on the bird and kill it. If you never shot a game bird then you don't know what I'm talking about. Perhaps a more experienced hunter would have some of these instincts under control. I dunno. If you shot a BB gun out your bedroom window and took out a crow off your neighbor's tv antenna then that was the stupid part of your brain working. See?

Lead shot is outlawed in some places for some game. I would imagine most bird now with steel shot.

I remember shooting 22 cal in junior high school as well. Them days are gone for good.

regards,
Bob

DaviD,

1 - Consider this 'if' the is a Legal Right to an Attorney
and the Legal Presumption of Attorney-Client-Privilege
that is even afforded Know Criminals and Terrorist.

2 - Then 'why' do the Liberal Democrats - Who are the
Great Protectors of Every Criminals and Terrorists Civil
Rights. Ask the Attorney-to-the-President to violate the
Legal Presumption of Attorney-Client-Privilege and
knowing ask AG Gonzales about what he did for the
President as the Attorney-to-the-President ?

3 - Could it be that for the Democrats only Criminals and
Terrorist have Legal Rights and Republican Presidents
are to be treated as second class beings deserving "NO"
Legal Protections afforded by the Law.

democrat justice appears to be law by mob rule ~ RHF

I find it hard to believe that the MUF is only 15-Mhz during the day in Australia. Maybe you are referring to the 'vertical incident' MUF which is always lower than the practical MUF for long distance propagation. The MUF has been at least 17-Mhz in the USA, where the length of the days and the altitude of the sun are much less than Australia at this time of year. I can still receive some stations on 21-Mhz during the daytime in the northeast US, so I don't see how it could be only 15-Mhz in Australia where the current seasonal conditions favor a higher MUF. What stations have you tried to hear above 15-Mhz?

Heard them on 18145 around 1400-UTC. Signal was weak but readable. They
were running duplex, transmitting on 18145 and listening on 18150 or
18160, looking for stations in Europe. The pile-ups on the two receive
channels were considerable.

I'm lucky i live in Australia, whilst most stations don't broadcast to
Australia directly.But im close proximity to Asia so i can piggy back
and listen to Asian streams, especially the SE asian one and sometimes
the S asia ones (esp DW radio).Also you can listen to Radio Australia in
USA and almost everywhere, despite being underfunded as is ABC
(australia broadcasting corporation)generally.You hear genuine
australian stuff not just stuff broken down in bite size pieces for
world consumption.Hell i even listen to this its better than the
mainstream media in Australia.Sorry to peddle but it is good.

2028. Re: Why is 'Talk Radio' So Conservative ? - Because People Tune-In ...

Newsgroup: rec.radio.shortwave
Date: 2006-02-13 08:06:34 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1139817994.034236.102980@g47g2000cwa.googlegroups.com>
Source record: 62280

DaviD - Hence 'we' have NPR and PRI and many other
"Public" Radio Networks at all levels of Government
to Preach the Liberal Agenda.

READ - CPB and NPR "$ponsored" Programming
[A National Network that Follows the Money $ $ $]
http://groups.google.com/group/rec.radio.shortwave/msg/b7eab6884d6f6fe4

Consider - Air America -=Verses=- National Public Radio
(NPR) [LIBERAL -v- Liberal {Non-Profit} Incorporated]
http://groups.google.com/group/alt.radio.broadcasting/msg/4872ef53ac067401

DaviD - When it comes to Broadcast Media Programming
and on-the-air 'Sponsorship" {Funding} that is 'directly' and
'indirectly' from [FOUNDATIONS]. The Big three are:

PBS = Public Broadcasting System = 349 'public' TV Stations
PBS=> http://www.pbs.org/aboutpbs/

NPR = National Prublic Radio = 750 'public' Radio Stations
NPR=> http://www.npr.org/about/

PRI = Public Radio Inernational = 746 'affiliate' stations
(available internationally through World Radio Network)
PRI=> http://www.pri.org/PublicSite/inside/index.html

WRN = World Radio Network =
'Globally Minded' ABC1 Adult Audience
WRN=> http://www.wrn.org/about/index.html
[ABC1 = The ABC1 Consumer Market Assessment 20-40 Year Olds...
http://www.researchandmarkets.com/reportinfo.asp?report_id=3865

ADD - A host of state and reaginol networks and consortiums:
Oregon Public Broadcastiing (OPB)
Minnesota Public Radio (MPR)

PLUS -Some PBS "Super Stations" like: WGBN, WETA,
WNET, WTTW, WPBA, WPBT, KERA, KRMA, KCET,
KQED, KCTS and more.

The 'quiet' Liberal-Left-Leaning "Foundation Supported" Radio and
TV Media is out there and it is very very strong and growing.

DaviD - To Many Americans Talk Radio with a
Conservative Perspective simply Balances the
Public Discourse that is Heavily Weighted in
Favor of the Left Wing Controlled Public Media
Monopoly that trumpets the Liberal Cause.

FYI - DaviD - The Biggest Slice of the "Talk Radio" Pie
is not Rush Limbaugh, it is 1200+ 'local' NPR Stations
and their "Soft Message" {Enlightened} Liberal Programming.
NPR has a Long Term Listenership {Generational} that goes
back for many more years then Rush Limbaugh has been on
the Air with his "Right-Thinking" Stick.

and that is my fair and balance opinion ~ RHF

Small technical correction. That type of operation described above is
referred to as operating "split". In the communications world, "duplex"
means transmitting and receiving simultaneously, not the case here.

I hear it very reliably on 15485 during weekend days East Coast time
(1500-2200 UTC).

It is so loud that I suspect it's a relay somewhere in the Americas
(Sackville? Maybe not, it comes in much more loudly and reliably than
Radio Canada as of late!) and it often comes in when the rest of the
band is comparatively dead.

And then I hear it on 7475 in the evenings too.

Tim.

> - what is an " F" loop..

I think "f loop antenna" means "for loop antenna". That auction doesn't include the loop antenna, it's just the variable capacitor.

That's a workable but odd way to make a variable cap... most folks are more familiar with the knob-tune air variables.

> - what frequencies will it pick up,
> etc

Tuned loop antennas are most commonly used for MW and LW reception (below 2MHz.) Some loop antennas at higher frequencies use a variable cap for proper loading.

> - and will it help pick up 7.415 when John Lightning is on the air

Not really. There are other loop antennas that are easily constructed and might help in certain noise environments. What's wrong with a couple feet of wire hanging out your antenna jack?

Tim.

FURIOUS Muslims have blasted adult shop Ann Summers for selling a blow-up male doll called MUSTAFA SHAG.

They complained that the novelty sex toy insults the Prophet Muhammad - who also has the title al-Mustafa.

The High Street chain's jokey £15 mustachioed doll has a 7in manhood and is targeted at hen parties.

VOA served it's purpose as the official news organ of the US Govrnment
in the cold war and they provided some modestly successful clandestine
radio services. It would appear that VOA is not seen as an effective
tool for getting the U.S. Government message out to the world any more.
Possibly the name and organization are seen as being tied to the cold
war with the USSR. Did Passport indicate what resources would be
shifted to which governmental agencies.

I don't see how a government funded and operated shortwave radio station like VOA would help if the government is doing the clamping down. Unless you plan to be the one who singlehandedly storms the VOA on Independence Avenue during the clampdown.

It would be more convenient to have a capacitor that is varied by
simply turning a knob. They're pretty cheap. You can dig them out of
old broken radios.

Do a search for "swl loop antennas" They're fairly easy to construct
and among the best antenna you can use for SW purposes that will not
only pick up signals but reject signals and interferance from unwanted
directions.

Bob's Antique Radios now has dial cord:

http://www.radioantiques.com/supplies.html

I haven't tried Bob's dial cord although I did order some other stuff a couple of months ago. I got my current supply of dial cord from Antique Electronics Supply and/or Ocean State Electronics. As far as I know, both sources still have dial cord.

I used to have an old fishing reel with some line which was indistinguishable from the dial cord Hallicrafters used in the forties and fifties. I assume it was silk core with a black cotton braid. Hallicrafters suggested "18 lb. test" dial cord as a replacement back then. The modern fiberglass core cord ought to be at least as good. One of the regulars at rec.antiques.radio+phono recommends dacron fishing line as dial cord. I'd be a bit leery of pure nylon cord, as I've heard it will stretch out more over time than other cords, although I've never tried it.

> I've restrung the dial on my S 53A using steel wire instead of dial
> cord, with exceptional results.

Half wire and half cord, like the Grundigs, with a tension spring in the middle?

>>>I got a can of "Gunk" Belt Dressing, sprayed some into a glass,
and applied it to the cord and the tuning shaft with a camel's hair
brush. That was three months ago and the tuning has been fine ever
since with no slippage. The belt dressing is the type used to spray on
automotive v-belts.<<<

My National NC-140 has an aluminum disk that originally had a coating on the
outer edge that was supposed to ride inside a grove on another disk. The
coating had worn off and it was slipping. I applied the same belt dressing
that you used to the outer edge of the worn disk about 10 years ago and it
is still working as it should today. RM~

PS, I keep a can of that stuff around, use it on table saw, belt
sander,drill press, air comp and etc., it's great stuff but never apply it
to a notched automotive belt, my son learned the hard way.

Where are you? And what kind of radio? On Saturday (Sunday 03:00 UTC),
I didn't have any problems taping "From Our Own Correspondent", and "People
and Politics" in that hour. Clear and S9+10, up here in Seattle.

On the other hand, the Voice of Greece program at 06:00 on 9775(?) kHz
that I think comes from Delano was coming in under WWV at 10000 kHz
last night. But that was on my FR-200 bedside radio, so I figured that
it was just a strong signal on the VOG frequency overloading my $40 radio.

With things drying out after some really wet weather here on the West
Coast, it could be intermod from a natural diode formed from corrosion.
Either near your antenna, or maybe at the transmitter site somewhere.

Guaranteed that they DO. They have an hour out of Delano at 06:00
aimed at their maritime audience. I think they barter time with
the VOA for time in Greece.

Last night it was the only thing I could get in the 9 MHz band at
that time. That happened a lot when they used a 15 MHz frequency, too.
The band was dead, except for that one huge signal.

According to 2006 Passport blue pages 15485 @ 1500-2200 UTC is relayed
by Delano, USA. However at other times and frequencies you can get them
directly from Kavala and Avlis Greece.

Besides Voice of Greece they relay VOA and other stations.

Yes, the 17 MHz band has been very good for me from the at least
southern part of the east coast USA, central and south America. The 21
MHz band has been very weak for the season to anywhere so the long
distance daytime MUF should fall somewhere between 17,900 to 21,450 KHz
according to my reception.

Ok, so is it possible to have both my current antenna pointed in one direction (minus the UHF section) and use this new antenna pointed in a different direction? Then just combine the signal? This would give me the best of both world w/o the need for a rotor.

2082. Re: Want to replace old flat tv cable with better coax.

You seem to know a lot. Here's a question, if my mast is well grounded (buried a few feet) do I still need to ground the coax before it enters the house? The way I see it, the mast will dissipate any charge on the antenna? Yes?

Those two sites and especially Kavala, Greece are busy transmission
sites so they are on many hours of the day and night. There are many
opportunities to get them directly but mostly in languages other than
english.

Rather unfortunate, but Mr. Chaney shot Mr. Whittington on a Saturday
afternoon. They had to wait for the Sunday morning talk shows to be
over, before announcing Cheney'd bagged a lawyer.

DaviD,

Which part of the simple fact is that the President as a
Citizen of the USA has the same Rights as Every Citizen :
* The Right To Legal Counsel
* The Right to Attorney-Client-Privilege

Something that the Liberal Democrats just don't get [.]

DaviD - If 'you' take away the President's Legal Rights
as a Citizen - then who is next ? and where does it stop ?

mob rule is mob rule be it democrat or republican ~ RHF

Only once did my bride catch a voice transmission. It was on Saturday morning @ 8:35 EST. Male voice "This is Suitsat One". That was the only transmission monitored here in Rhode Island.

I travel daily throughout Rhode Island, Central & Western Massachusetts and have on board an Icom IC-2100h FM only transceiver using a 5/8 wave vertical antenna.

Some of the locations I must work in are above average terrain by a few hundred feet or so. The radio is on from 6:00 a.m. until I return in the afternoon.

Since that Saturday morning, I have heard nothing that I could say was emanating from the Suitsat-1 project, much to my disappointment, but I still have not given up listening all day long, just in case.

I do hope in the future there will be further projects that will not only include Amateur Radio community, but as in this one, all people the world over who care to listen.

Very 73 and keep an ear open, and who knows !

There were a lot of guys over there who had radios.Most of them kept their radios in their barracks area.When I toted my radio in my shirt pocket,I kept it inside of a piece of plastic like saran wrap because I was always sweating day and night from the heat and humidity.I couldn't sleep without my little electric fan I bought at a store.Sometimes one of the generators would go off when somebody was switching over from one to the other and I would wake up.

After those pictures of the Ace and his 'date' appeared in this newsgroup, he's been flooded with offers of homosexual encounters. We can only guess at the numbers he's accepted.

Ever notice that in the Ace's eyes, cuhulin can do no wrong? I wonder what goes on there...

I've listened to RA's news programs, and they are mainly of interest to local and regional audiences. As a news junkie, I find that unfortunate. I find that the BBC and RN (and DW, although DW can't be heard in English to the Americas any more) have much better news coverage, with the Beeb being the most inclusive. I've heard complaints that the best of RA's feature programming isn't audible in the US at all, or is on at inconvenient times, probably as a result of the massive time difference between Australia and the US. In short RA is very much a regional broadcaster. I suppose that if you're in Australia or the South Pacific, that would be nice. But for Americans it's boring. Plus, I have a real hard time forgiving RA for broadcasting weeks of cricket while the tsunami disaster was unfolding in their backyard. I had to turn to the Beeb, and I never looked back.

A Few Questions About dick cheney And His Shotgun.
www.nomorefakenews.com
One time when I was doing night Guard Duty with some other guys in our 114th Aviation Company ammo dump (Ammunition Receiving Maintnance Storage and Supply) one night about three miles North of the North Gate,Tan Son Nhut,I was issued a Shotgun.I guess that was better than that puny little M-14 I was issued when I got to Vietnam,although I would have much prefered an M1-Garand Rifle.

Barnega,

It is a form of Air Variable Tuning Capacitor that is designed
to use with an AM {Medium Wave} Loop Antenna which is
used to generally tune the AM/MW Broadcast Band (BCB)
between 530 and 1700 kHz.

"F" loop.. - for Loop Antennas

When used with a AM/MW Loop Antenna it can tune
from 300-500 kHz to 1700-2000 kHz or more.

Maybe 'if' it is used with a One to Three Turn Loop Antenna
designed for the Shortwave Bands it could tune around 7 MHz.

hope this helps - iane ~ RHF

> antenna? Yes?

Not sure who you are addressing, but the shield of the coax does need to be grounded before entering the house. This is regardless of whether the antenna mast is grounded, but it should be. I would run a copper ground wire, at least 12-gauge, from a clamp on the antenna mast to a good copper clad ground rod. Connect the shield of the coax to this ground wire too. You can use a coax grounding 'block' to make the shield connection to the ground wire. This block is the kind that cable TV companies use to ground their coax before it enters the house. You can buy one at Radio Shack or hardware stores with coax parts.

They do pretty damn good on the East Coast too! Strongest signal on
15MHz band by far, regularly beating the broadcasters out of Okochobee.

IIRC they also used to have a relay in North Carolina?

Not a bad receiver. Make sure BNC RF Input socket isn't loose. Don't
pay too much.

Now that's a useful feature. My useless phone camera (only useful for
getting it prohibited from change rooms) doesn't have a flash LED, but
for those which do, it might not be that hard to run it continuously
at a fraction of the current. Good for finding dog poop in the dark,
for example.

Looks like Dead Eye Dick missed the bird by a mile, if he was even aiming at one. Why the hell did he have the safety off with the gun lowered!

I'm somewhat bothered that the White House delayed the announcement to keep the story away from the sunday morning news programs. I am troubled by the obvious dual standard in play here. The average Joe out hunting would be under investigation for one or more charges. Dead Eye Dick is getting away with a minor fine and belatedly buying a bird stamp for his hunting license.

>
> Works like a Champ.
>

One thing I'd be concerned with is that the wire is harder than the shaft, and the shaft might get worn by the wire, especially with alot of tension and especially at the end of the tuning cap's travel where a bit of slip is desirable. That's why I figured my Grundig used a half cord - half wire setup. The cord wraps around the shaft, where a little bit of slip and stretch isn't a problem, and the wire holds the dial pointer, which will always indicate correctly even if the cord stretches a bit.

Of course, I've never actually restrung a radio with wire, so I'm just talking off the top of my head here. I suppose it might be wise to check for metal flakes around the tuning shaft (s) every once in a while.

Thanks David. I can have a very nice one
complete/boxed/convertor/manual etc for about US$130.00. I brought a
brand new ICOM R5 scanner as it was wide band but it has dreadful
sensitivity on LW/MW and the SW is mediocre. I wasted my money on it.
Thanks again,
Alan

I can't help but to have noticed over the last 10 years I have to work harder to catch a little English broadcasting (unless it is religous stuff - which of course they have every right to spend their money on broadcasting but it is disheartening to get a blasting good signal of crap).

I have a very fast internet connection, two killer computers (one a laptop other a dual processor 64 bit desktop machine) and I perish the thought of listening to these stations via them. I also have Sirius and despise the idea of listening to the BBC or any other station that I have grown accustomed to listening to via shortwave. It is the challenge... the romance. I get two hours of BBC in the evening on 5975kHz here in the Northwest US and it isn't enough. I think they're broadcasting to Central/South America and it still blasts in but is overtaken by a different broadcaster just at the time of the evening I'd like to listen. Radio Netherlands has also changed their 8PM (local Pacific Time) English broadcast which used to be a bulletproof "go to" listen on 6165 and 9590. They do have earlier broadcasts but the declining "prime time" English broadcasts are fading. Prime time to me is 7PM - midnight.

It is somewhat sad but I'm glad to have been listening for the time I have been and I really hope something happens to revive this great way of broadcasting news and stories. On the other hand, if it is going to slide all the way until I can no longer hear English broadcasting from other nations I'll be somewhat proud to say I was there before the end, and listening as much as ever during the decline.

Long live shortwave.

Adam

I initially started listening to HF Broadcasting for the geek appeal.
But as I got older I realized that the only way to find out what's
going on in the USA is to hear it from an objective ''third-party''
perspective as provided by the International Broadcasters; thus I got
hooked on the content.

I am very glad that rather than vanish entirely some broadcasters have
remained alive via 21st Century delivery methods e.g. the internets
and the Sirius.

The Pro-80 is not a wideband scanner that incidently covers MW/HF. It
is more of a Communications Receiver with a scanner form factor.
$130 is a good price for a Very Good used unit.

Any two hunks of moldy rain gutter will do. Or, for my worst case, a
corroded connection for an FM antenna to a big hunk of 300 ohm twinlead.
Being in sight of three or four 50 kW AM transmitters, it put stuff all
over the bands for the whole house.

A perfect dial cord material is the cord used in parallel rule devices used on drafting boards in place of t-squares. Some schools still use parallel rules instead of computers in drafting training . This cord is perfect. It has a steel core and a plasic flexble sheath. Although the draftsman has been largely replaced by the CAD operator, some office supply stores and such may have some old stock sitting in the back room. It is worth a look and the schools that still use parallel rules will be getting replacement cord from somewhere. There is about 25 feet of cord used in each parallel rule, so an out-of-service rule would also be a good source. All the drafting supply stores I once knew are gone now, but the cord is too good to throw away.

Sure. Back in the dark ages, when the UHF channels went up to Channel
83, TV sets didn't have a combined antenna input, instead they had
two (usually 300 ohm) inputs, one for each band. To save cable,
VHF/UHF splitter/combiners were used if you had an all band antenna.
They're bidirectional, the same unit can be used either way. So you
can run two antennas into the one cable.

The EiBi skeds have been updated as of 8 February:

http://www.susi-und-strolch.de/eibi/bc-b05.txt

I see it does not include the following:

** ALGERIA [non]. RTV Algeria in Arabic/French again via ISS
500 kW from Feb. 15
0600-0658 on 9885 / 162 deg to CeSoAf
0700-0758 on 9885 / 194 deg to NoWeAF till Feb. 25
11725 / 162 deg to CeSoAf
11830 / 194 deg to NoWeAF from Feb. 26
0800-0858 on 13620 / 194 deg to NoWeAF
1200-1358 on 15255 / 194 deg to NoWeAF
17840 / 162 deg to CeSoAf
1900-2058 NF 9475 / 194 deg to NoWeAF, ex 9885 Jan. 18-24
2000-2158 on 7325 / 162 deg to CeSoAf

All transmissions of RTV Algeria via VT Communications deleted
from Feb. 6: 0600-0800 on 9735; 0700-0800 on 12020; 0800-0900 on 13750;
1200-1400 on 17690, 17755; 1900-2100 on 5985; 2000-2200 on 7105
(Observer, Bulgaria, Feb 14 via DXLD)

No disagreement, some of the best radio in the world. But they've
lightened up their schedule quite a bit especially for their Pacific
schedule track, and we now get a lot of Radio Australia produced chatter
+ music shows (as of this last year or so, instead of a second or third
rerun of a bunch of the Radio National shows). And they've gone to
using ABC Radio Local for some of their weekend stuff. Which shows us
that your radio can be just as insipid as NPR. ;-)

I own a big old,old parallel drafting rule and a small one that is about the size of a legal note pad.It has a hole in the middle of the cover (sort of like the front of a hard back book) for the knob that lossens and tightens the L shaped rule to fit through when the cover is closed.The L shaped rule can be adjusted to any angle desired by loosening and tightening the knob.It is a very handy little device for drawing straight parallel lines on paper.I bought them at the Goodwill store about ten years ago.I am not going to remove the cord (I didn't know there is a cord in there) out of my big old parallel rule though.I dont think my small parallel notebook size parallel rule drafting device has any cord in it.They bough still work just as good as the day they were made,perfect parallel lines.

The hour at 01:00 where it goes away is a bit peculiar. 5975 from
22:00 to 01:00 (2-5 PM PST) comes in with varying quality. (But not a
convenient time. I miss 6135, etc that went to 10 or 11 PM. Gotta sell
those XM subscriptions, I guess).

>Radio Netherlands has also changed their 8PM
>(local Pacific Time) English broadcast which used to be a bulletproof
>"go to" listen on 6165 and 9590.

It's still pretty good at 9 PM PST, although the 5 PM (aimed at the
Central US) is often stronger.

2234. Pentagon Sets Sights on Internet

Newsgroup: rec.radio.shortwave
Date: 2006-02-14 19:22:13 UTC
From: David <rickets@knac.com>
Message-ID: <ddb4v1d6lohsuulogmt8ol0a41ua6udqcb@4ax.com>
Source record: 62682

The Pentagoni¿½s War on the Internet

Mike Whitney | February 14 2006

The Pentagon has developed a comprehensive strategy for taking over the internet and controlling the free flow of information. The plan appears in a recently declassified document, ï¿½The Information Operations Roadmapï¿½, which was provided under the FOIA (Freedom of Information Act) and revealed in an article by the BBC.

The Pentagon sees the internet in terms of a military adversary that poses a vital threat to its stated mission of global domination. This explains the confrontational language in the document which speaks of ï¿½fighting the netï¿½; implying that the internet is the equivalent of ï¿½an enemy weapons system."

The Defense Dept. places a high-value on controlling information. The new program illustrates their determination to establish the parameters of free speech.

The Pentagon sees information as essential in manipulating public perceptions and, thus, a crucial tool in eliciting support for unpopular policies. The recent revelations of the military placing propaganda in the foreign press demonstrate the importance that is given to co-opting public opinion.

Information-warfare is used to create an impenetrable cloud around the activities of government so that decisions can be made without dissent. The smokescreen of deception that encompasses the Bush administration has less to do with prevaricating politicians than it does with a clearly articulated policy of obfuscation. ï¿½The Information Operations Roadmapï¿½ is solely intended to undermine the principle of an informed citizenry.

The Pentagoni¿½s focus on the internet tells us a great deal about the mainstream media and its connection to the political establishment.

Why, for example, would the Pentagon see the internet as a greater threat than the mainstream media, where an estimated 75% of Americans get their news?

The reason is clear; because the MSM is already a fully-integrated part of the corporate-system providing a 24 hour per day streaming of business-friendly news. Todayï¿½s MSM operates as a de-facto franchise of the Pentagon, a reliable and sophisticated propagandist for Washingtoni¿½s wars of aggression and political subterfuge.

The internet, on the other hand, is the last bastion of American democracy; a virtual world where reliable information moves instantly from person to person without passing through the corporate filter. Online visitors can get a clear picture of their governmentsï¿½ depredations with a click of the mouse. This is the liberalization of the news, an open source of mind-expanding information that elevates citizen awareness of complex issues and threatens the status quo.

The Pentagon program is just one facet of a broader culture of deception; a pervasive ethos of dishonesty that envelopes all aspects of the Bush White House. The ï¿½Strategic Intelligenceï¿½ Dept is a division of the Defense establishment that is entirely devoted to concealing, distorting, omitting and manipulating the truth.

In what way is ï¿½strategic intelligenceï¿½ different from plain intelligence?

It is information that is shaped in a way that meets the needs of a particular group. In other words, it is not the truth at all, but a fabrication, a fiction, a lie.

Strategic intelligence is an oxymoron; a tidy bit of Orwellian doublespeak that reflects the deeply rooted cynicism of its authors.

The internet is a logical target for the Pentagonï¿½s electronic warfare. Already the Downing Street memos, Bushï¿½s bombing-threats against Al Jazeera, the fraudulent 2004 elections, and the leveling of Falluja, have disrupted the smooth execution of Bushï¿½s wars. It is understandable that Rumsfeld and Co. would seek to transform this potential enemy into an ally, much as it has done with the MSM.

The Pentagonï¿½s plans for engaging in ï¿½virtual warfareï¿½ are impressive. As BBC notes: ï¿½The operations described in the document include a surprising range of military activities: public affairs officers who brief journalists, psychological operations troops who try to manipulate the thoughts and beliefs of an enemy, computer network attack specialists who seek to destroy enemy networks.ï¿½ (BBC)

The enemy, of course, is you, dear reader, or anyone who refuses to accept their role as a witless-cog in new world order. Seizing the internet is a prudent way of controlling every piece of information that one experiences from cradle to grave; all necessary for an orderly police-state.

The Information Operations Roadmap (IOR) recommends that psychological operations (Psyops) ï¿½should consider a range of technologies to disseminate propaganda in enemy territory: unmanned aerial vehicles, "miniaturized, scatterable public address systems", wireless devices, cellular phones and the internet.ï¿½ No idea is too costly or too far-fetched that it escapes the serious consideration of the Pentagon chieftains.

The War Dept. is planning to insert itself into every area of the internet from blogs to chat rooms, from leftist web sites to editorial

commentary. The objective is to challenge any tidbit of information that appears on the web that may counter the official narrative; the fairytale of benign American intervention to promote democracy and human rights across the planet.

The IOR aspires to "provide maximum control of the entire electromagnetic spectrum" and develop the capability to "disrupt or destroy the full spectrum of globally emerging communications systems, sensors, and weapons systems dependent on the electromagnetic spectrum". (BBC)

Full spectrum dominance.

The ultimate goal of the Pentagon is to create an internet-paradigm that corresponds to the corporate mainstream model, devoid of imagination or divergent points of view. They envision an internet that is increasingly restricted by the gluttonous influence of industry and its vast ï¿½tapestry of liesï¿½.

The internet is the modern-day marketplace of ideas, an invaluable resource for human curiosity and organized resistance. It provides a direct link between the explosive power of ideas and engaged citizen involvement. (aka; participatory democracy)

The Pentagon is laying the groundwork for privatizing the internet so the information-revolution can be transformed into an information-tyranny, extending to all areas of communications and serving the exclusive interests of a few well-heeled American plutocrats.

Message-ID: <1139946425.535329.173270@g47g2000cwa.googlegroups.com>
Source record: 62684

The parallel rules used in drafting offices were about 5 feet long and 5 inches wide.They had long cords trailing out of each end that were strung around pulleys mounted at each corner of the board (maybe 3'x5'). When properly set up the rules would maintain perfectly parallel lines all over the board. Set squres were used on the top and bottom edges to draw various lines. If you have a complete parallel rule, it should have a lot of cord wrapped around it. Although the cord is great for stringing dials, it would be a shame to wreck a perfectly good parallel rule, although they are not used much these days. Those old rules, primitive as they may be, helped design all the things from bridges to radios from 1945 to 1980. Drafting machines were also used, but they didn't have the ability to easily draw long parallel lines such as those needed for structural steel, although they were good for detailing parts.

Now this Sierra Papa idiot has keyed up on a pirate while the pirate
was doing a broadcast. This moron keyed up on WBNY on Sunday. What
the hell is wrong with this moron? If he really likes pirate radio, as
he keeps stating in his posts, why would he throw a signal over top of
a good pirate doing a broadcast. What an idiot. This guy, Sierra
PooPoo is just masturbating on the air and doesn't give a damn about
pirate radio. If he had any talent, he'd put a show together and be a
pirate, but he doesn't so instead, he keys up on top of pirates. What
a retarded asshole. You know Darkington Starsky, I'll bet it works
both ways asshole. Do you really want a war with pirates? Keying up
while someone is on the air, can work both ways. Dumb ass, go back to
the gay bar where you belong. And take your little faggot boyfriend,
Sparky, oh, wait, thats you too, with you! Keep keying up on pirates
and see if it doesn't come back to bite you in the ass one day. You
are a stupid fuck!

He asked a civil, shortwave-radio-related question on an appropriate newsgroup. He requested, and IMO, was entitled to some fair answers from anyone who had information to share.

You, OTOH, come on with ad hominem insults and unsubstantiated accusations that have nothing to do with the original topic, and frankly appear to be aimed at some kind of vigilante revenge.

Banished from the pirate community? What kind of joke is this? You can't banish somebody from a community that exists only sporadically on the ether anyway! If I knew where he was, I sure wouldn't tell you, you mobster. OTOH, if I find out your QTH, the FCC (and maybe the local sheriff) will be the first to know. They'd be really interested to see this usenet string.

So, between you and Starsky, guess who gets the modicum of respect and benefit of the doubt?

BJ

2247. All India Radio

Logged All India Radio English broadcast at 15:30-15:45 UTC today.
News, and a feature about Valentine's day in India. Didn't think I
could get that here in the northeast US, according to my various
printed guides. Cool.

He won't. I know where he's located and could easily blow his cover if I wanted to. (...Johnny Lightning from years ago, Krack'd-up... 'people in glass houses'...) But it ain't me so-called-tagging your lamely produced garbage anyway, so chill, dude. Go smoke some more dope and keep that paranoia stoked to the max!

And 'Bouncer', I'm terribly sorry you lack what it takes to play DJ on a "real" radio station, and be the NAB-clone you so desperately desire being. It's apparently causing you to have some sort of self-loathing complex deal happening, but puh-leeze, leave your skittishness at the door. (Oh WAIT! SOMEONE'S LOOKING AT YOU THROUGH YOUR WALLS! IT'S THE MAN!) But, since the concept of true free radio seems so inappropirate (intended misspelling... get it?) here, I'll stop my op-ed pieces so you don't come completely and totally unraveled. Oh. just who is the editor here, anyway? You 'Bouncer'? Kwakers? Thanks so much for setting me straight on all the strictly adhered to rules of being a radio outlaw. By all means, take me to your leader. ?

"RULE NUMBER ONE: OBEY ALL RULES!" HAW!

Starsky

...I'm gone....

And by the way -- *PLONK* *PLONK* bye bye byeeeeeeeeee

what a faggot......your now a hunted man, congradulations....

Didn't you just post an article detailing how the Pentagon wants to
smash or control the internet so as to restrict the free flow of
information? They could conceivably block overseas websites that
broadcast the truth, such as the BBC. Right now Britain is an ally; but
if Tony Blair gets kicked out of office (he could conceivably be
dethroned by a no confidence vote at any time) that could change
quickly. Satellite radio is also subject to government control. There
are only two providers, and with that sort of monopoly satellite radio
is subject to pressure from the US govt. I've been trying to point this
out to you, but you refuse to see it. To chevyorange: I mainly listen to
the BBC for The World Today, which comes in fine most nights on 5975.

Thanx to all who replied and helped out. I've installed a balun tranformer at the antenna and I've replaced the entire run with RJ6 coax cable. Picture quality increased drastically on all channels. I've got my antenna pointing 206 degrees yet I can still pick up channels 29 (103 degrees) and 19 (143 degrees.) (My antenna's fault I'm sure.) At any rate the local stations (Sacramento) all come in super clear, so I'll leave it as it is.

Thanx again.

I don't know what he really designed. It appears to be a standard 12 volt amp kludged onto the back of a 12 volt power supply. Of course, he did add some kind of metering, and moved the control switches to the front of the power supply, but if that's designing, I have designed cars, computers, and of course every home I have lived in since I could push a dresser around.

I haven't looked at my big old parallel drafting rule since the day I bought it years and years ago.Come to think about it,I think I do remember it has some cords that are around the pulleys or whatever.It is either in my old shed in my back yard (full of junk) or in my den. (full of junk) Next time I stumble upon it,I will take a real good look at it.I doubt if I will ever use it,I wont sell it or trade it off,if my sister or brother wants anything I have,it's theirs for free.A few years ago,I bought a magnafying glass that has a round flourescent light around it and it is mounted onto a floor stand that looks like one of those old,old floor lamp stands,I think it dates back to the 1940's or sometime in the 1950's.She wanted it for her sewing room,I told her,here,it's yours now.I like to buy old things simply because I like to collect old things.All kinds of old things,gadgets,radios,tools,whatever.
I have been a junk collector all my life,junk is in my blood.

I'll keep an eye on it, if there are any untoward developments, I'll
let you know. So far, I've noticed no difference in the way the radio
handles with the wire dial cord.

2270. Geophysical Indices - "at a glance" freeware

Newsgroup: rec.radio.shortwave
Date: 2006-02-14 22:08:07 UTC
From: J Tabor <denews@taborsoft.com>
Message-ID: <11v4l6o3uce4i57@corp.supernews.com>
Source record: 62569

Greetings All,

You are invited to download and use the new version of GeoAlert-Extreme Wizard. The default download is known as QSL-ware. Which basically means freeware. <G>

The QSL-ware version has no time limit and automatically downloads and displays solar indices in a friendly - at a glance - manner.

www.taborsoft.com/gawiz/

Although many will be satisfied with the default version, advanced features are, of course, available when registered. Free 60-day trial also available.

Cheers,
Jim - KU5S

Now Add the Universal-Radio .Com Info to that Link :

Eton {Etón} E5 'portable' AM / FM Shortwave Radio
http://www.universal-radio.com/catalog/portable/0055.html

Eton {Etón} E5 Radio Features :

* Radio Reception Modes : AM (No AM-SYNC) and FM
+ Plus Single SideBand (SSB)

* Dual Conversion AM / SW Circuitry

* 700 Memories for Frequencies
plus Memory Scaning
and Automatic Frequency Storage (ATS)

* FM Stereo Output via the Earphone Jack

* Local / DX Switch
{Local is usually a 20 dB RF Signal Attenuator}

* Wide-Narrow Selectivity (Two Filter Band Widths)

* External Shortwave Antenna Jack

* The AC-to-DC Adapter can also Recharge
the Four (4) NiMH AA Batteries in the Radio

Good evening everyone,

I just catched this one at 22:40 UTC. I heard this radio with a strange language, based on French for sure, but that wasn't French for sure ;-) !

Some kind of "creole" perhaps. Addresses given on air were including web site in ".cu", so Cuba, and the radio might be this one :
http://www.radiorepublica.org/

Can anyone confirm ? does one knows the tranmitter location please ?

Thanks in advance for your input...

Charly

Update: Whittington had a minor heart attack related to the shooting.
Seems a piece of birdshot lodged in his heart, causing ventricular
fibrilation.

I was a small bore target shooter in my youth... so don't know all that much
about shotgun rounds.. but it seems to me that for birdshot to penetrate
that far through the much denser human musculature and bone structure,
wouldn't it have to be A) a lot closer than 30 yards or B) a hot load?

Inquiring minds want to know.

It was cold weather over there too and no doubt they were wearing some thick clothing/jackets/coats.I am no expert on the power of birdshot like the kind used in those Shotgun shells,but I think they were standing at a fairly close distance when Sureshot Deadeye dick cheney opened fire with that Shotgun.

I get sixty nine XM music channels with my DirecTV subscription and the sound comes out of only the one speaker in that old MGA/Mitsubishi tv set.While not the best sounding sound in the World,it isn't bad sounding either.My next new tv set (probally next month) is going to be an RCA TruFlat screen wide screen tv set that has speakers built in to both sides of the tv set.(stereo?) And if I could afford it,I would buy one of those Butt Kickers and hook it up to my new tv set.

Communist China bans mosque attendance for children in occupied East Turkestan

The persecution of Islam in occupied East Turkestan continues, and now includes the banning of all East Turkestanis under 18 from entering a mosque. The rest of the Muslim world, of course, is obsessing over cartoons - a glaring hypocrisy exposed by East Turkestan's Government in exile: "The Jyllands-Posten cartoons, offensive as they are, did not touch a single hair on the head of any Muslim. By contrast, Communist China has murdered over 210,000 East Turkestanis through open-air nuclear tests."

I try not to give advice on lightning protection. For about 25 years I had a tower up about 40 feet and never took a hit of any kind. The tower was not very well grounded and there were about 6 coax cables from various ham antennas coming into the radio room. None were grounded . There was also a wire about 130 feet long split in the middle and coax comming into the radio room. It was up about 30 feet and not grounded in any way. Only damage I ever took was a couple of telephones over the phone line. The installation was done by the phone company and I never looked at it to see how well it was done. Others I have know had well grounded systems and still had their equipment wiped out by lightning.

Kennedy's drinks could easily have been tampered with. They both could
have died in that car crash. John Jr. is also out of the way.

"

Cheney victim in intensive care after heart attack

>From Tom Baldwin in Washington

HARRY WHITTINGTON, the 78-year-old Texas lawyer shot by Dick Cheney over the weekend, suffered what doctors called a "minor heart attack" yesterday and was moved back into intensive care.

David Blanchard, head of the emergency room at the Corpus Christi hospital in Texas, said

a birdshot pellet about 5mm in diameter had lodged in Mr Whittington's heart,

causing "irregularities". He will remain under "close supervision" in hospital for at least another week. "

It's the new political correctness taking over. In order not to offend,
radio stations are calling themselves "The Radio Station" and promising
a steady diet of muzak.

..ok, probably not in Brazil. But scarily plausible for America, don't
you think? ;)

> I fell much better now.

I wouldn't do that. It's getting increasingly impossible to find
portables that don't have some connection to the CCP. Sony is gradually
phasing out SW receiver production. After they do, you'll have a choice
of a portable made by the CCP (Tecsun/Eton/Grundig) or one with an
unknown connection to the CCP (Degen). Even Sangeans are made in
China-and Sangean is a Taiwanese company! That's probably why they don't
say "Made in China" on their radios.

I don't recall a 28 gauge shell having that size shot in it. A size 6 largest size comes to mind. That would be a heck a lot smaller than 5 mm, which is approx 0.20 inches in diameter.

I live in an apartment complex and can't put antennas up. So, I hooked a wire to the downspout and run it under the window - works very well. It's prolly only 30 ft at the most but it is straight up and down. If there is a tree not far away, tie a stone to the end of as long a wire as it takes and chuck it up into the highest part of the tree (or do the same with a slingshot). Use small diameter wire.

I should clarify: I hooked the wire to the bottom of the downspout. You could easilly use a small alligator clip. Make sure it has electrical contact with the metal in the pipe, and that the pipe is metal.

"Verstaldin" <damienmj@earthlink.net> wrote in message news:CtxIf.563$VI6.239@newsread1.news.pas.earthlink.net...

No, it is not. That is like saying "I heard Radio Station on 1230 AM" in BCB circles. "Radio Difusora" means a radio station, any radio station. Every one of the MW, FM and SW stations in Brasil is a radio difusora, with or without caps.

It's like saying you went to see your lawyer, Mr. Esq. All lawyers who are men are "Mr. Esq." so you have not identified anyone.

They banned split rims on trucks because they were a danger to life and limb and now you want me to bounce up and down on some vinyl tramp with commie Chinese seams? I think not. The idea of some artificial 'blow up' job is quite disgusting.

Who would think so little of your morals as to give you this thing? Is it a normal Mississippi birthday gift or something?

michael the pure

Maybe, but heavy shot goes in deeper. For birds, you don't want to be
spitting out shot during your meal, so small diameter shot is used to
keep the things close to the outside. The police, on the other hand,
would probably use a number 1 shot or something near that.

Hi All,

im looking for a HF antenna that will be ok for listening to Kinloss Rescue i used to have
a long wire at my old property which was great but now im with my girlfriend she does not fancy a 100 ft long wire from on side of the house to the other please could somebody advice me of good alternatives So what hf antennas are there apart
from long wires that i could have both advice on indoors and outdoors would be great.

Once again thankyou for all your hard work and help.

2366. The Slinky Quarter Wave Length (1/4 WL) Shortened {Loaded} Vertical Wire Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-02-15 08:33:23 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1139992403.313922.261050@g47g2000cwa.googlegroups.com>
Source record: 62764

Jonny in the UK,

Check-Out - This "Frequency Wavelength Calculator"
http://www.csgnetwork.com/freqwavelengthcalc.html

The One Wave Length Measurement for 5.680 MHz
is 173.24 Feet or 52.84 Meters.

A Quarter Wave (1/4 WL) Length Vertical Wire Antenna
would be 43.31 Feet or 13.20 Meters.

THE SLINKY QUARTER WAVE LENGTH (1/4 WL)
SHORTENED {LOADED} VERTICAL WIRE ANTENNA :

A "Shortened" {Loaded} Quarter Wave Length (1/4 WL) Vertical
Wire Antenna : [Using One Long Bottom Loading Coil]

Requirement - This Shortened Quarter Wave Length (1/4 WL)
Vertical Wire Antenna Requires a Vertical Support-Point of at
least 25 Feet and up to 45 Feet high above ground level; with
about 27 to 33 Feet being about the right height.

First use a Coax Cable Feed-in-Line running out along the
ground or under the ground from your Radio about 45-50 Feet
(15-17 Meters) from the House to the Base of the Antenna.
* If space is limited 20-25 Feet (6-8 Meters) will do OK.

Use a Four to Eight Foot (4-8 Ft) Ground Rod at the Base
of the Vertical-Up-Leg of the Antenna.

Use a standard Full Size Slinky as the Variable Loading Coil
for the Quarter Wave (1/4 WL) Length Vertical Wire Antenna.

NOTE - The standard Full Size Slinky has about 100 Turns
with a Diameter of 2 3/4 Inches and a Circumference of
8.64 Inches for a Total Wire Length of 72 Feet.

How Long Does a Slinky Get ? - I Calculate that the Optimum
"Stretched-Out" Length of a Slinky would be about 22.9 Feet.

Connect {Solder} a 23 Feet (7 Meter) piece of Insulated Stranded
Copper Wire to one end of the Slinky.

To the free-end (Far-End) of this Copper Wire tie a 50 Foot piece
of Nylon-Poly Rope to Rig the Wire Antenna Element.

Connect (Solder) the free-end (Bottom-End) of the Slinky to
the Center {Inner} Conducter of the Coax Cable.

Connect (Clamp) the Outer Shield of the Coax Cable to the
Ground Rod.

Rig the Nylon-Poly Rope to your Upper Vertical Support and
Stretch-Out the Copper Wire up to this Support-Point.

Note - The Radio-End of the Coax Cable should have a
Coax Cable Connector to 'fit' your Radio.

Connect the Coax Cable to your Radio and Tune to 5.680 MHz.

Use the Nylon-Poly Rope to Shorten or Lengthen the Length
of the Antenna to Receive the Maximum Signal {best sounding}
on 5.680 MHz.

Note - If the Upper Support-Point is only about 25 Feet high :
Then the Far-End (Top-End) of the "Insulated" Copper Wire
may go through or over the Upper Support-Point and be angled
down at about 45 Degrees from the Vertical Wire Antenna.

Trimming the Wire Antenna Element - If necessary the Copper
Wire Antenna Element may be Trimmed {Cut} from the Far-End
by Three Feet (3 Ft) or One Meter; and then the Length of the
Antenna may then be Adjusted for the best signal on 5.680 MHz.

hope this helps - iane ~ RHF

2369. New frequencies to Middle and Far East from IRRS-Shortwave

Newsgroup: rec.radio.shortwave
Date: 2006-02-15 08:55:03 UTC
From: Ron Norton <ron@nexus.org>
Message-ID: <43F2EC67.6020407@nexus.org>
Source record: 62767

Hello there from Milan, Italy,

We have recently extended our schedule with new daily broadcasts targeted to the Middle and especially the Far East (i.e. India, China, Philippines), and would appreciate receiving reception reports from listeners on these target areas:

We are interested especially in the following:

Mon-Fri: 15,750 kHz from 1300-1400 UTC to the Far East
Sat&Sun: 15,750 kHZ from 1300-1500 UTC to the Far East

reception on this frequency has been reported throughout Asia, Australia, Africa and the Americas.

and:

Fri: 9,380 kHz from 1800-1930 UTC to the Middle East and N Europe

We have also extended our low power broadcasts to Europe now daily on 13,840 kHz from 0800-1600 UTC and on 5,785 kHz from 1600-2100 UTC (2200 UTC on Sat&Sun). Check our complete schedule for all other broadcasts at :

http://www.nexus.org/NEXUS-IBA/Schedules/

Please address your reports to: reports@nexus.org

Thank You and best 73s,

de Ron

>
> Thanx again.

The antenna's 'fault' proved to be a benefit in your situation.
Sometimes it's better to have an antenna like yours which has less gain
(sensitivity) for weak stations but a wider beamwidth, so you can
receive stations from different directions without needing a rotator.
It's a trade-off that sometimes pays off. Nice work.

For One and All,

Some News Reports by Instant Experts {Gun Hating Liberals}
have claimed that VP Cheney used a 12 Gauge Shotgun
with "OO" Buckshot. - LMAO ~ RHF

Weapon Name : #4 Buck Shot, Tactical Entry,12 Gauge
http://www.ozarkmtns.com/less-lethal/products/cat11.htm
http://www.firearmstactical.com/wound.htm
http://www.firearmstactical.com/images/Wound%20Profiles/12%20Gauge%20No%204%20Buckshot.jpg

A Buck Shot Wound
http://www.strangepolice.com/images/content/110454.jpg

Cheney's Buck Shot Hits His Hunting Companion
Harry Whittington
http://www.cantonrep.com/index.php?ID=269129&Category=23
http://www.cantonrep.com/photos/February2006/13shotguy.jpg
Katharine Armstrong, the ranch's owner, said Sunday that
Cheney was using a 28-gauge shotgun and that Whittington
was about 30 yards away when he was hit in the cheek,
neck and chest.

FWIW - It was my understanding that most US Police
Departments use 12 Gauge Shotguns loaded with Nine
Pellets of "OO" Buckshot - "OO" Buckshot is about the
Size and Weight of a 38 Caliber Bullit used in a standard
Police Six Shot 38 Revoler. - One "OO" Buckshot Blast
is the equilenent of being Shot Nine times at Once by
a Policeman with a 38 Pistol - The 12 Gauge Shotgun
with "OO" Buckshot is a very effective Police Weapon
in a Kill-or-be-Killed situation.
http://en.wikipedia.org/wiki/Buckshot
http://www.blackwaterusa.com/btw2004/articles/1122epp.html

The 12 Gauge Shotgun is the most devastating and lethal weapon yet
devised for inflicting rack and ruin at close range. A safe bet for
ammunition selection is to use the 2-3/4-inch 00 buckshot load. The
impact of one of these shot shells is essentially equivalent to getting
hit with a nine round burst from a submachine gun.
Source => http://www.internetarmory.com/shotgun_ammo.htm
Buckshot loads, on the other hand, will exhibit penetration on the
order of 12 inches or so, a depth sufficient to intersect vital blood
distribution structures and terminate aggression.

Most AM Talk Radio listeners think Pat Buchanan is liberal.

Commercial radio is ''concervative'' (not really-what people call
conservative these days is a kind of homoerotic neosocialism) because
the huge companies that own the stations are promoting their best
commercial interests, rather operating in the public interest.

2376. 28 Gauge

Newsgroup: rec.radio.shortwave
Date: 2006-02-15 13:52:31 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <11v6ch73pb5pld7@corp.supernews.com>
Source record: 62774

I thought I was a hunter, but I don't recall ever hearing of a 28 gauge shotgun, until the Cheney incident. I did a search and have a web page that may bring some of us up to speed rather quickly. It is:

http://www.chuckhawks.com/28gauge.htm

Joyce Riley said this morning that Mr. Whittington is back in ICU with a heart condition. It seems that "more than five and less than 200" pellets are still in the man and at least one of them has been swept via the blood stream INTO his heart. They supposedly cannot operate.

I think we may be beginning to see why they concealed this accident for more than 24 hours!

Why don't we send Cheney to Iraq and let him pick off his friends over there one at a time? :-)

Did Mr. Whittington fail to pay his "dues" for last year? <g>

That's what I gathered as well - the pellet migrated from some other
point and entered a trouble zone.

Getting hit by any or even one pellet is bad enough,but what if they
were lead pellets and the Doctors can't remove them from Mr.Whittington
for whatever reason(s)? Lead poisioning? Lead pellets have been
outlawed,at least in some places,they have.

Here's a little something...

http://www.dickcheneygunclub.com/

By the way, my Dad was a gun enthusiast, a real crack hunter and good sport - he used to complain about guys like this all the time. He eventually stopped hunting in part because he became nervous about all of the dopes in New England (especially New Hampshire and Vermont, his favorite hunting grounds) shooting each other up.

Those Little Rascals (Our Gang) are the best.I need to find all of those Little Rascals (Our Gang) movies on DVD.
I remember when I went to school in Martinsville,Indiana in 1947,on rainy days at recess,sometimes we would throw little bean bag thingys through a hole in a box.And those little hard rubber animals we used to play with.Mrs.Rulein was our teacher.She had a mean looking face on her,(like a four pound hammer) but she was very nice.

I don't get it "they can't be removed" theory, as I understand it are
very small, like real small if somehow they got into this guys veins?,
why not get that shit out, seems to be easy to me.

The bottom line is shit happens daily, folks don't want shit to happen
but since we are all humans we always find a way to mess things up! Just
imagine how anyone would feel after shooting a friend like that, and
then finding out the news we got yesterday. Would you want your friends
at work to know you had done something like that?

There was also a story on the news about a father/son hunter where the
dad accidently killed the son and then made the decision to join is son
and killed himself. I know I could never forgive myself and would
probably do the same thing.

Yes. I know exactly what you were saying. You said the station was called
"radio station" and that applies, at least in Portuguese, to a few thousand
AM, FM and SW stations.

No DXer worth their salt would make such an obvious mistake and then defend
it.

Well, what is the name of the station? Are they not Radio Difusora? Are they not on or near 4915?

Forget about the language lesson, Frackelton, and read my original post. Try to read it for what it was without the intent of giving me a language lesson.

Depends on where one looks I suppose (and I rarely trust PWBR anymore). I see many sources that say "Radio Difusora"

Do a Google for Radio Difusora Macapï¿½... see what comes up.

LMFAO! My big 'crime' was not writing 'Radio Difusora, Macapï¿½' in my original post!

Dwardo's OK. A little too fond of his R75 for my taste but quite
factually adept overall, especially regarding MW and Latin America.

30 yds is pushing it for distance with a 28 gauge loaded with #7 1/2 or
#8 bird shot.

Another curious thing is that all of the reports say that Whittington came
up from behind Cheney. Birds don't generally flush from behind you they take
off in front of you. Why did Cheney turn around?

Uhhhhhh... he turned to follow the bird. Reports I've seen seemed to indicate
Whittington was off to the side and slightly behind.

(Everything is 'curious' to conspiracy enthusiasts)

I didn't say NPR doesn't have a liberal slant, though I think their news is balanced and accurate and very well done. But they do include conservative commentary in their programming and it too is very well done - no mud slinging or hysterics like on AM radio. I wish I could recall the name of the commentator they feature.

Listen, screwball, all you guys are in the same kettle of fish legally anyways - none of you has a leg to stand on. Not that I care, really - pirate radio is fun - but you have a lot of nerve as the pot calling the kettle black. You're already just as illegal as he is, and arguably just as unethical, and you have the balls to complain that he's tagging your show? Ya whinin' crybaby.

You have no grounds for complaint, legally or ethically. You rat him out, and you're sunk too, so instead you do the vigilante thing, which is also legally shaky as jello. What nerve - and stupidity.

Dear Cuhulin,

Thanks for the heads-up on this one! Very, very useful, especially with the coming major changes in our television service. I guess I am a "Luddite" as I do not subscribe to cable or satellite TV (or radio either, for that matter). I absolutely refuse to pay for advertisements - that is what you're getting, of course; they include bit of "entertainment" to keep you interested - which is what one is doing when one pays for what should be free, at least in my opinion. These signals do travel over the "public" airwaves, after all, so if it comes into my house I should be able to use it and do what I will with it IN THE PRIVACY OF MY OWN HOME for free, again in my opinion (the government does not see things my way, choosing to side with the "big money" companies). (Note that I do not begrudge anyone who disagrees with me and chooses to pay for TV and/or radio.) Therefore the list on this link, customized for one's home address and taking into account local obstructions, etc., is of great interest to me and I have "bookmarked" the site. (I only wish that they had similar information regarding radio antennas as well, but of course you can get information regarding the antenna orientation, etc., of AM & FM radio stations, as well as shortwave stations, from WRTH and some of the web services.)

By the way,how do you like your new Sony ICF-SW7600GR? I hope you are as happy with it as I am with mine. Have you tried any external antennas with it?

I apologize for the above "diatribe" (but I do not apologize for my opinion). Thanks again for this link.

Best,

Joe

It wouldnt have to penetrate that far. A pellet as small as a #7 from a 28
gauge would only have to find a small vessel to take a ride to the heart.

In the hours immediately after the shooting they would not have known where the pellets were, and indeed that single pellet may not have migrated to the heart yet. We saw political spin control and nothing more. They wanted to keep the story away from the sunday morning news discussions.

>

That assumes his friends are in Iraq. An unlikely situation, but are they? Unless you are somehow referring to either american soldiers or Iraqi insurgents, but that would make no sense whatsoever.

Are you a heart surgeon? Apparently not because I understand that they
are balancing the considerable risk of doing major surgery on a 78 year
old against the risk of damage from the single pellet causing damage if
left in his heart.

In this situation I don't think such a grandstand act would be
warranted. Whittington walked into the range of fire.

Cheney's statement - for what it's worth, while I have no love for Cheney, I admire him for his position here. It's the right thing to say and do. It also accurately describes the size of a piece of birdshot, about 2 or 2.5 mm diameter.

Bruce Jensen
****

WASHINGTON - Vice President Dick Cheney on Wednesday accepted full responsibility for shooting a fellow hunter and defended his decision to not publicly disclose the accident until the following day.

"I'm the guy who pulled the trigger that fired the round that hit Harry," Cheney told Fox News Channel in his first public comments since the shooting Saturday in south Texas.

Cheney described seeing 78-year-old Harry Whittington fall to the ground after he pulled the trigger while aiming at a covey of quail, calling it one of the worst days of his life.

"You can talk about all of the other conditions that exist at the time but that's the bottom line and - it was not Harry's fault," he said in an interview with Brit Hume. "You can't blame anybody else. I'm the guy who pulled the trigger and shot my friend."

He said he fortunately always has a medical team with him, and members of that team responded to Whittington immediately after the accident.

"I ran over to him," Cheney said. "He was laying there on his back, obviously, bleeding. You could see where the shot struck him."

He said he has no idea if he hit a bird because he was completely focused on Whittington.

"I said, `Harry, I had no idea you were there.' He didn't respond," Cheney said.

Whittington was reported doing well at a Texas hospital Wednesday after doctors said that a pellet entered his heart and that he had what they called caused "a mild heart attack."

One pellet from Cheney's shotgun - just under one-tenth of an inch in diameter - traveled to Whittington's heart. Hospital officials said the Texan had a normal heart rhythm again Wednesday afternoon and was sitting up in a chair, eating regular food and planning to do some legal work in his room.

Cheney has been roundly criticized for failing to tell the public about the accident until the next day. He said he thought it made sense to let the owner of the ranch where it happened reveal the accident on the local newspaper's Web site Sunday morning.

"I thought that was the right call," Cheney said. "I still do."

Cheney said he agreed that ranch owner Katharine Armstrong should make the story public, because she was an eyewitness, because she grew up on the ranch and because she is "an acknowledged expert in all of this" as a past head of the Texas Parks and Wildlife Department. He also agreed with her decision to choose the local newspaper as the way to get the news out.

"I thought that made good sense because you can get as accurate a story as possible from somebody who knew and understood hunting and then it would immediately go up to the wires and be posted on the Web site, which is the way it went out and I thought that was the right call," Cheney said.

"What do you think now?" he was asked.

"I still do," Cheney responded. "The accuracy was enormously important. I had no press person with me."

No, the name is Radio Difusora do Macap&#65533;. Just as there is no "Voice of"
but there is a "Voice of America."

> Forget about the language lesson, Frackelton, and read my original post.
> Try to
> read it for what it was without the intent of giving me a language lesson.

Why are you never able to say you are wrong? This is such an obvious faux
pas that even you should see it. "Radio Difusora" means "Radio Station" and
is not a name specific to one radio station. Radio means radio and Difusora
means "sender" and is the equivalent of "emisora" in Spanish.

You are so quick to say something nasty about others, but when you make an
absolutely stupid error yourself, you accuse others of being wrong.

The comma is a WRTVH error that you are perpetuating. The name is Radio Difusora de Macap&#65533;. That means, in English, Radio Macap&#65533;. Again, slowly, "radio difusora" is a generic term meaning "radio station." No station can be named "radio station" without the actual name of the station appended.

Now you are down to trying to cover your dumb mistake by looking for typing
errors. The fact is, without the Macap&#65533;, what you posted identifies no
station specifically and thousands of them generically.

`http://www.macapa-ap.com.br/empresas/rdm.htm has a complete history of the station.`

This seems to be your modus operandi when caught with your pants down, grinnin' and lookin' stoopid. You reverse the blame and call folks retarded.

You are still wrong, and the amazing thing is that someone who egotistically calls themselves a DX ace can make suck a basic, stupid error. It is not like there were few SW outlets in Portuguese. were the error about a station in an African vernacular, it would be understandable and usual. But to see our self-proclaimed "ace" make such a mistake for one of the "DXiest" countries of the world is laughable.

Typing error? Wasn't an error at all since you've spelled it that way several
times. Now quit trying to cover your dumb mistake, Frackelton, and go troll
elsewhere.

LMFAO at the fake Hispanic, yet again.

Thanks for the link. I noted in another thread that central and south
America reception has been improved for myself lately and was wondering
if people in other locations noticed also noticed the same in the 31, 25
and 16 meter bands. I have not been listening to the 60 meter band.

I make stupid typo's all the time on Usenet so I see it as no big deal.
You correct mistakes with another post and move on.

As I said, it was my typing error. I accept that. Since I was cutting and pasting, it replicated. Mea culpa, mea culpa.

And that does nothing to change the fact that you said a station was called "radio station" without a specific to the station name.

I was 13 when I went to Latin America, and grew up there, in homes where only Spanish was spoken. My high school (except one year) and most of my college was in Latin America, and I have lived nearly all my adult life in Latin America or in Hispanic communities in the US.

I noticed this when scanning in Prescott, AZ the last few weekends. I still look for the few remaining Ecuadorian and Colombian SW stations. I have noticed a lot more Brazilian Portuguese stations as you mention. I do not get abouve 60 meters, but the lower band ones are very noticable. I only have about a year of experience with this location, so really do not know if this is typical at this time of year or for the location (my yard ends at the Prescott National Forest).

And everything you've said, Frackelton, does nothing to change the fact that any DX'er with even one iota of a clue would have been able to discern exactly what I was saying about Radio Difusora being on 4915.

And how would you then explain the change of frequency of another radio
difusora in Brazil to that frequency? Just because WRTVH says that the
specific station in question is th eonly occupant of the frequency does not
mean someone else is not there or that WRTVH has not made a mistake... I
know they NEVER make mistakes, too.
>

Here is a sample of the best translation I could find on the web. Not
great but some of it is readable. Alta Vista - Portuguese to English
produced a more readable result than Spanish to english.

<http://www.altavista.com/>

Maybe you have a better web solution for language translation?

HISTORICAL SYNTHESIS ON The DIFFUSING RADIO OF MACAP

With the nesting of Territorial the Executive in 25 of January of 1944,
the Government of the Amapï¿½ mounts a service of the press and
propaganda, destined to the spreading of its program of action and
development.

In 19 of March of 1945, it circulates the first edition of the Periodical of the Amapï¿½, a composed weekly and printed matter in the workshops of the Official Press.

One month before, in 25 of February of 1945, is inaugurated the auto Service of falantes of Macapï¿½, destined to radiate chosen musics, reporter and information of public interest. The presentation of the Service, is made by Pablo Eleutrio Cavalcanti de Albuquerque, paraense and Managing journalist of the Service of the press and Propaganda.

The Service of information, created to divulge the acts of the Government of the Territory, becomes the embryo of the Diffusing Radio of Macapï¿½.

The sonorous equipment is installed by Mr. Heracildes Macdo, technician of radio of the Panair of Brazil (company of aviation of the time). The studio functions initially in the building of the old intendancy, today used for the Historical Museum of the Amapï¿½, radiating the sound amplified for two possantes loudspeakers, type bugle, located in the Square of the Matrix and the Square of the Baron of the Rio Branco (wide of They are Jose).

In my original post: "I SUSPECT that the other weaker Brazilian is Radio
Difusora".

Meaning of course, Rï¿½dio Difusora de Macapï¿½. It's what is known in English as a 'presumption'.

WRTVH? Haven't purchased one in years.

I shot and killed a Pheasnt Bird in Montana in 1956 with my Remington 22 caliber Rifle.It was goodddddd eating too when it was all cooked up.When I went to Sioux Falls,South Dakota in November 1971 to buy my 1914 Ford T Model car,Gary Peterson (I bought my car from him ($1,800.00,his pretty blonde wife took my money) he had the day before been hunting (they let me sleep on their couch that night) and shot a Pheasant Bird.It was delicious that night at supper.

So you persumed that a radio station was a radio station.

Globo, R�cord, Inconfidencia, Cruzeiro do Sul, Jovem Pan are all "radio
difusoras."

>
> WRTVH? Haven't purchased one in years.

I saupopose when you think you know everything, you would not need reference
materials.

I spend months out of every year in Latin America. Maybe that is why I know
that a radio station has to have a specific name, and you don't?

Well I can read. Seems as though you were born in 1946. You went to Mexico in 1963, "I was put into an informal exchange program through which I would complete my Junior year in High School in Mexico City". (You'd been in school and working part time in Cleveland area, prior) In 1963 you were around 17, no?

Source record: 62843

Stupid trolling goofs and reporters in the media that hate the Bush administration will go on and on about a hunting accident but ignore a former VP committing treason.

Here are articles about the Al Gore speech accident in Saudi Arabia.

<http://www.cnsnews.com/news/viewstory.asp?Page=%5CPolitics%5Carchive%5C200602%5CPOL20060214a.html>

<http://worldnetdaily.com/news/article.asp?ARTICLE_ID=48838>

<http://www.themoderatevoice.com/posts/1139861375.shtml>

I've heard about the hunting accident in all the USA media and numerous short wave stations and practically nothing about what Gore spoke about in Saudi Arabia. I would not even know about the Gore speech except for the web news.

If you heard about the Gore speech on short wave post it.

I was an ''intern'' at a 5 KW daytimer in 1963. I remember pulling
wire copy for the JFK assasination. I used to go to Mexico with my
dad because you could bring in a gallon of booze duty free for each US
citizen in the car.

I think its hilarious....

On a darker note ...Cheney didnt have the 7$ hunting permit. He was given a warning ticket!!!

Other people that hunt in texas without a license get their gun...or / and vehicle confiscated and a hefty fine on first offense. Some of these are even kids and teenagers.....they dont get warnings....whats the deal?

I mean so what!!!... he shot some damned old lawyer.....

Why is this asshole huntin without a license!!!!

Now thats UNFORGIVABLE!

Pretty good signal after midnight on 7090 in Michigan. What is also interesting is listening for other rare DX stations calling in to make a contact.

Biggest problem while using "split" frequency operation is operators giving a range of frequencies for callers to transmit on. This is fairly common but it usually results in people just caliing continuously over the whole range and nobody can get through. I fired up the rig about 4 AM for a quick contact after they settled down to one calling frequency and did not have a problem.

I absolutely agree. I just refuse to pay money for these commercials which is what subscribers are doing when they sign up for XM, Sirius, Cable or Satellite TV. Of course it's their choice to do so as it is my choice to not.

After all, these sponsors are trying to sell me something. I believe that THEY should pay for that privilege.

That's just another reason I like shortwave radio.

Best,

Joe

Actually, 16. And that was my third or fourth time in Latin America. The
prior ones were not related to radio, and started with time in Tikal when I
was 13 with a team from the University of Pittsburgh. I was 17 when I put my
first station on the air.

What's the range they've been instructing people on which to listen? Most DX ops I've talked with go around 5 up from the listening frequency.

I know hauling a forearm sized bottle of Hydrogen was a NO NO NO! - so it went
in luggage - empty - and had to be fueled on the other end for the work needed,
dumped - since it was contaminated from the local University source - and back
into the packing. Big PITA but fun. Got to meet all sorts of people.

As I remember we got permission to rebroadcast KTAR (NBC Radio Network
in 1963) late Friday evening.

I haven't been listening to Radio Havana lately. If anybody would report something like that, they would. Cuba is in bed with Iran and Saudi Arabia. Also, I suspect that Iran's Voice of Justice show would report it, but I don't receive it too often. It's possible that Arabic language SW, such as the Saudi SW service, reported it.

No, I object to someone who thinks they have identified a radio station when
they have not who is also, generally, abusive to a large number of the
participants of this group.

The doctors gave out the diameter of the shot. I don't think ANY factory puts that size shot in a 28 gauge shell. Another thing, how is it possible for the thing to be 5mm diameter AND be in the lawyer's body in a count of up to 200?

A web search turns up some numbers:

Lead, density = 11.0 g/cmï¿½

With that we can figure the total lead in the shell.

The volume of a sphere:

V=(4/3)*pi*r3
V=(4/3)*pi*(2.55mm^3)
V=(4/3)*3.1415*15.63
V=65.45 mm^3
V=0.065 cm^3

Density =11`gms * .065 = 0.71gms

200 shot * 0.71 gms = 144 gms.

At roughly 28 grams per ounce, it would be 5.14 ounces of shot in a 28 gauge shell.

That doesn't make sense.

This web page has some numbers. Somebody is lying about the shot in the lawyer's body and I KNOW that X-Rays lie a lot less than politicians.

==========
The 28 is not the gauge for large size shot, as a limited number of pellets can be accommodated in the standard 3/4 ounce load. Like the .410, the 28 is probably at its best with #7 1/2, 8, and 9 size shot. #7 1/2 is probably a pretty good compromise for shooting most upland game and #9 gives the pattern density to break clay targets at reasonable ranges.

For years Federal offered a 1 ounce magnum load in 28 gauge. I have not seen it listed in recent Federal catalogs, but it has been picked-up by Winchester in the form of a Super-X High Brass load with a muzzle velocity (MV) of 1205 fps. Shot sizes are 6, 7 1/2, and 8. The one ounce

load allows efficient use of shot as large as #6, which number 225 to
the ounce. Winchester offers no other 28 gauge hunting load.

http://www.chuckhawks.com/28gauge.htm

More Shotgun Read Material,

Combat Shotgun
http://en.wikipedia.org/wiki/Combat_shotgun
Shotguns - Police Application :
In law enforcement use, weapons of this type are most often called "riot guns" because, before around 1930, it was commonplace for US police to attack unruly crowds of people who failed to disperse after being "read the riot act" by firing shotguns loaded with ammunition containing small "birdshot" pellets at the ground just in front of them, so that pellets would ricochet upwards and strike the rioters in the legs and groin. This tactic became less common as chemical agents like tear gas became more common in police arsenals after World War I, but the term "riot gun" is still in very common use, particularly among police officers in the US.
Police Roit Shotguns :
Modern police often use special shotguns known as riot shotguns that fire rubber pellets or one solid rubber slug to suppress crowds or violent targets; while still extremely painful to their intended targets, these are much less lethal than their predecessors.
http://en.wikipedia.org/wiki/SPAS_12
http://en.wikipedia.org/wiki/Franchi_SPAS-15
http://en.wikipedia.org/wiki/Image:Franchi_spas15.jpg

It is still my understanding that most US Police
Departments use 12 Gauge Shotguns loaded
with Nine (9) Pellets of "00" Buckshot with
Five (5) Rounds (Shotgun Shells) in the Weapon.
http://www.morrisacademy.org/police/pfirearms.asp

12 Gauge Shotgun Loaded with Single "0" Buckshot
has Twelve (12) .30 Caliber Pellets per Round (Shell).
http://www.kurtsaxon.com/defense001.htm
http://hornady.primediaoutdoors.com/HDstory3.html
http://www.backwoodshome.com/articles2/ayoob031221.html
The effective Killing Range is up to 50 Yards (150 Feet).

The traditional Police Shotgun Load for the 12 Gauge is "00" Buckshot.
http://www.spw-duf.info/longgun.html
This standard Shotgun Load delivers Nine (9) of these .33 Caliber Balls. The larger the Pellet, the heavier it is; the heavier the pellet, the more penetration. At this time, tactical loads, which were designed for the law enforcement market, are only available in "00" Buckshot and in Slugs.

Insipid? mate you obviously haven't heard our commercial radio that has
an patent on insipid.Radio Australia broadcast the *best* of Radio
national and ABC local radio as well as its own stuff.But you got to
keep in mind ABC is severely underfunded.Put it this way you should be
glad that they don't broadcast gardening shows (they do broadcast one on
domestic ABC radio it is boring as batshit) on Radio Australia.But its
in depth analysis and discussion of Australian and World issues, leave
domestic and much of international radio to shame.

Yours truly
Adam

What ''falsehoods'' would those be?

Maybe the conservative mass media isn't publicising whatever Gore said
because it's a big can of truth worms.

There are at least 2 Saudi Arabias. One is the oligarchy that Bush
French kisses and holds hands with. Another is the poverty stricken
and hopeless common Arab on the street that Bush alienates by the
above behavior.

I have hunted grouse and quail (and lots of other critters). I have had
birds flush ahead and fly off to the left or right, but never towards me. I
have had rabbits do that (run towards me, not fly -- the day I see flying
rabbits is the day I stop hunting), but never birds.

Darkington "starsky' is more than a faggot. He's an idiot.

He keyed up on top of WBNY doing a pirate broadcast on Sunday. Here' s
a guy who pretends he's a pirate radio fan, and then he keys up on top
of a pirate doing a broadcast, for his gay pirate chat? What a moron!

Real smart jackass. You and Sharon still having trouble in bed? Maybe
if you were getting some, you wouldn't be keying up on pirates moron.
Go away and stay away. That keying up routine can work both ways, did
you even stop to consider that? Dumbass.

I like pirate radio, but I don't throw keys over top of pirates doing
broadcasts.

http://www.huffingtonpost.com/2006/01/18/why-we-fight-director-_n_14044.html

Why We Fight" Director: We're Not Apathetic, "What We Really Are Is Helpless"...

Just as Why We Fight plays like a near scholarly dissection of what Dwight D. Eisenhower first termed the "military-industrial complex," director Eugene Jarecki discusses the movie and its issues in paragraphs rather than sentences, talking at points like a veteran professor of American history. We need more filmmakers with Jarecki's ambition and intelligence. But that doesn't stop one from thinking that he maybe ought to run for office.

Has the film changed at all in the year since it premiered at Sundance?

It's sort of a sad statement of the times that, no, we didn't have to make any changes. Except we've kept having to increase the casualty figures that are listed in the movie with regard to the Iraq war, because the body count keeps going up.

Perhaps the patient does not want media visitors who really don't care about him but are motivated by 'the story'. He could indeed take a turn for the worse, it isn't unheard of and he is no longer a spring rooster. As to rumor mill..........it's just that - rumor.

Don't forget, they tweezed out a bunch of shot from his face & upper body.
So they knew what they were dealing with. I assumed when I saw the "5mm"
description by the doctor, or whoever made the estimate, was doing just that
- making a rough estimate that proved to be exaggerated.

So you are saying that Cheney's behavior is equivalent to that of Kennedy.
I didn't know you thought so little of Cheney.

My online bio is focused on selling services to radio stations. Despite having had a paper published about the Third Mayan Civilization, I do not include that in the r&#65533;sum&#65533;. I do not include the fact I had a printing business at age 9, or my subsequent endeavors outside broadcasting, any more than a Mercedes Benz sales brochure has pictures of the Rhine.

When I was at ammo school (Armorer School) at Fort Knox,Kentucky in 1963,we didn't learn about Shotgun Shot thingys.We learned about Rifle and Handgun and Helicopter Rockets and the Warheads on those Helicopter Rockets mostly.We dealt with the usual kinds of ammo that was being used in Vietnam at the time.

This board is about DX. You committed a major error in identifying a
station, and you are all the more a target for criticism when you employ the
grandiose and egotistical handle of "DXace."

If you can not figure out that I started working in radio when I was a
pre-teen, don't blame me for your math misinterpretations. And this is about
your attempts to spin "radio station" into an ID for a specific radio
station.

Someone who has lived about 47 years in Latin America or its equivalent and
only 13 in non-Hispanic US, most of which were pre-school years, is hardly
of the US or US / Anglo culture. In the US Census count of 1990 I was told
in no uncertain terms by the census taker that I was Hispanic as the
definition of that term in the US has to do with language and culture.

Which is why I got tired of his bashing, rudeness and incivility and called him, albeit on a relatively trivial matter. If you pretend to be a DX Ace, you are held to a different standard. This guy is just tiring and boring, besides being an example of the Ugly American. I hate to think of how many stations he has reported to that he has offended.

A DXer in my book is more than someone who claims to have heard a bunch of
stations and countries. You have not learned anything from your experience.,
and are, in fact, the poster child for xenophobia, starting with your blind
and irrational hatred of anything Canadian.

I can go buy a scalpel, but I am still not a surgeon. You are a scourge to
the good name of DXers.

OK consider myself astounded that the old media is playing up the Cheney
shooting incident to absurd heights and ignoring former VP Al Gore
giving a traitorous speech in Saudi Arabia.

Also disturbing is the old media itself becoming the story with the
insulting the faith of Islam "cartoons" as free speech and the rehashing
of Iraq prison abuse scandal.

The way I look at it is that events are going to well and there is not
enough bad news to report on so the old media will manufacture some by
insulting and inciting Muslims. Maybe we can look forward to an increase
in terrorists blowing themselves and innocent people around them.

The media itself and the reporters that are a part of it are not
supposed to be news subjects. Evidently all pretense of reporting
transparency has been abandoned.

Non-stories are news and important stories are not news to the old media.

I noticed that as soon as events improved in Iraq the media itself and
Al Gore seem bent on turning around the gains made there in establishing
a stable democracy. How about that for a conspiracy story?

If he was just hurting himself it would be one thing but he is hurting
our efforts in the middle east by speaking falsehoods there.

I can't imagine why he would do such a thing. Giving a speech that would
result in giving radical Muslims political ammunition supporting their
cause is at the least an incredible lack of judgment for which there is
no excuse. Al Gore is a traitor.

I've not noticed it here, but I thought I'd pass along
that the guy paraded around Mother Jones and other
outlets as the man in the forefront of the antiwar
congressional/senatorial conquest, Paul Hackett,
dropped out of the race for Senate in Ohio (Mike
DeWine's seat). The same Democratic Leadership
that wanted him to run apparently pressured him
to drop out; he's rather bitter and says he's going
to drop politics.

Not like it's an easy win for DeWine, he's got a
conservative challenger in the primary because
the conservative wing thinks Dewine doesn't
represent their interests (DeWine is rather moderate),
and his challenger from the Democratic side, Sherrod
Brown, is at least decently known in NE Ohio.

Paying attention to the Cheney shooting accident non-story is a cover
for not reporting the real news stories.

The real story is Al Gore being a traitor, the media itself inciting
Muslims against the USA through liberal political "cartoons" and
rehashing the Iraq prison abuse stories that are three years old.

Another real story are the Saddam tapes that were just released.
If you hear about them note that you will only see discussed that he
warned the USA about terrorism coming to our shores but you will not
hear about his talk of WMD and so the media will use them to bash Bush
and not report anything that supports the actions of the current
administration.

People should be able to get the "feel" of being manipulated by the old
media because it's happening front and center. This is the blatant abuse
I have seen to date.

It's a conspiracy.

What did Gore say that's got you so excited?

What did Saddam say that was new?

The Cheney deal is newsworthy because it furthers the notion that
these bums think they're above the law.

Actually they were adapted from some motorola tech notes. He wrote the
parts list, the girls built them. These were full production units until
FCC signal purity regs were instituted. They were good for heating up
external low pass filters. Beleive it or not I think the company is still
in business.

Yes he had a cb in his car. I don't see his call in the dbase any more.
Probably deceased.

Yes, you did. You stated that the "other" station was "radio difusora."
Radio Difusora means, "radio station" and is not an ID of a station.

How about things like a DXer being helpful to other DXers, participatory in DX clubs, one who learns from their listening, one who is interested in broadcasting, one who is interested in technical aspects of propagation or transmission, etc. Not every DXer is going to fill all these qualities, but most of the good ones have many of them to their credit.

I like to listen to shortwave. I'm not interested in eavesdropping or conspiracy theories. My little Radio Shack DX-394 isn't capable of too much and I'm not financially in a position to have what I'd like etc. <s>.

I know that the universe has a lot of mysteries and possibilities, just as "spock" said <s>. Any government will try to take advantage of anything it knows that the rest of the world does not, including our own government. But there is not a lot I can do, except vote <s> FWIW. Mother Nature still has a lot of secrets she isn't going to reveal easilly. God still has the power over everything, in spite of what some think. A being such as ourselves can think pretty highly of themselves, but in the end, we are put in the ground, and governments or political ideologies cease to matter :) Any agony we can feel or suffer in this life is inconsequential compared to the next .

I am still in awe that electronics can do what they do in spite of everything in our universe . I am sobered by the thought that our existance requires so much struggle for so little gain, and that we have attained what we have at the cost we have paid. It can take entire lives to pass on what constitutes an advance; everything can be lost in an instance of unimaginable violence. I would think the human race could take a hint :)

You can read the news reports from before and after we invaded Iraq.
Before there were caravans of vehicles from Iraq at the Syrian border.
After we occupied Iraq we found weapons manufacturing and munitions
sites with all the machinery ripped out. The majority of the country is
desert where instillations can be hidden and weapons buried.

These days we have a former Saddam air force general claiming airliners
were striped of their insides for more room to transport weapons to
Syria.

I don't know about the Iraq general but we saw the convoys at the Syrian
boarder before we invaded. We know weapons went to Syria but how much of
that was WMD is unproven. The WMD could still be in the dessert or in
Syria.

Saddam will continue to be a world menace until he is finished for good.

You can find this stuff if you are inclined to do the research.

Defeats? I certainly wasn't 'defeated', 'tard boy, nor do I feel defeated.

Credibility? You've never had any, so therefore you're in no position to talk.

If anyone was defeated it was the bloviating Frackelton, he's actually a gringo masquerading online as a Mexican.

He is pretty funny though!

Now run along, stem.

2750. OT Climate Change Faster Than Thought

Newsgroup: rec.radio.shortwave
Date: 2006-02-17 01:11:42 UTC
From: David <rickets@knac.com>
Message-ID: <4h8av1hfdspuhs7jde1m43e3qoupnc5cm7@4ax.com>
Source record: 63102

[Eric] Rignot and Kanagaratnum, of the University of Kansas Center for Remote Sensing of Ice Sheets, announced their discovery on Thursday at the meeting of the American Association for the Advancement of Science in St. Louis. Their full report appears in the Feb. 17 issue of Science.

"We're all seeing the same thing," agreed Gordon Hamilton, a Greenland glacier researcher at the University of Maine. Hamilton's work has focused more directly on the close-up monitoring of individual glaciers. All the science is pointing in the same direction, he said. "The changes are very alarming."

One big reason for alarm is that climate models designed to predict climate change and sea level rise do not factor in what's happening in Greenland, Hamilton said.

"This process is much more important," he said, than climate modelers had previously suspected.

Another worry is that all this ice entering the north Atlantic could slow down the global heat conveyor belt, what's called the thermohaline circulation.

The North Atlantic is where that conveyor belt takes dense, salty, cooled-down surface waters from the topics down into the depths. There, the current turns south and re-circulates the dense water to warmer climes.

Large increases in fresh water in the North Atlantic could cause the surface waters to stop sinking and slow or halt the entire conveyor belt. That, in turn, could make it much colder in northern climes and warmer in the tropics.

"This is something that we could see in the next decade," said Hamilton.

2760. Mystery (to me) Reciever

Newsgroup: rec.radio.shortwave
Date: 2006-02-17 01:49:45 UTC
From: Bob Loblaw <bob@hotmail.not>
Message-ID: <ZY9Jf.4481$n67.3142@edtnps89>
Source record: 63108

Today, I bought a small lot of electronic stuff from a fellow who routinely buys from g'mint auctions. It was mostly older Tektronix stuff but one item didn't belong. It looked at first glance to be an early CB tranceiver. On closer inspection, I realized it was a shortwave receiver.
The front panel bears the name, "Century-21". The only other identifying marks are "Made in Japan" and a serial number.
Gross cosmetic details aside, this thing looks and works a lot like my venerable old Drake SSR-1. I wouldn't be too surprised to find the circuit boards are the same.
Does anyone have any ideas about what this might be?
Thanks!

Kevin

Another real story is that there are no WMD in Iraq. That if WMD were moved
to Syria (as some claim) that they can as easily be given to terrorists
there as they were in Iraq. That if we aren't invading Syria then either
there were no WMD moved there since Saddam didn't have WMD, or that
terrorists are getting WMD to be used against Americans any day now. But
let's talk about Gore while either our lives are on the line becuase of
Bush's incompetency or that he was lying to us in the first place and should
be impeached.

Last I heard, speech isn't a crime in this country, unless you are Sami
Al-Arian. What did Gore say anyway? I didn't hear his speech, I just heard
what people like Tony Snow and Sean Hannity said about it, and you know how
they lie.

Excellent performers. Magnavox made some fine high quality portable shortwave radios during the late 70s and early 80s. The higher end models rival radios like the Sony 2010 in performance. That being said, it's hard to find a good working D2999 due to CPU, LCD display, and keyboard contact problems mostly brought on due to age.

Hillary Clinton lambasted the 24-hour delay between the Cheney hunting accident
and his notifying the press. If asked why it took her 6 DAYS to notify anyone
about Vince Foster's suicide note, she'd say, "That's different, it took a
long time to forge that note convincingly."

Yes I own a Magnavox D2935 for nearly 20 years, everything is ok except the button membrance has aged. Good radio by Philips in the 80's and no more now. The D2999 model could be compared to the elusive Sony ICF-6800W, early models of portable during that period.

On shortwave it suffers heavy from overloading (cross modulation) during nighttime hours. Sound it very good because of large loudspeaker.
It does not compare to the Sony ICF-6800W.

Ohio Gov. Bob Taft last summer was convicted on misdemeanor criminal charges for failing to report gifts on his ethics forms, including some from Mr. Noe.

Two of Mr. Taft's former aides have been convicted on similar charges, and two more were charged last week.

Other elite fund-raisers have been under investigation.

Brent Wilkes, a defense consultant, is connected to U.S. Rep. Randy "Duke" Cunningham's (R., Calif.) bribery scandal.

>From The Toledo Blade, 2/14/06:
http://toledoblade.com/apps/pbcs.dll/article?AID=/20060214/NEWS09/602140373

By STEVE EDER
BLADE STAFF WRITER

The 53-count indictment against the former GOP fund-raiser comes on the heels of the guilty plea entered last month by lobbyist Jack Abramoff, who is at the center of a wide-reaching corruption scandal in Washington.

Both Mr. Noe and Mr. Abramoff share the elite status of Bush "Pioneers" because they raised at least $100,000 for the President's re-election campaign in 2004.

Mr. Bush has returned $4,000 in campaign contributions from Mr. Noe and his wife, as well as $6,000 from Mr. Abramoff, his wife, and a client, but he has not returned the money the men raised for his re-election campaign.

Yesterday, the DNC reiterated its call for Mr. Bush to return money raised by Mr. Noe and other "indicted fund-raisers."

"Tom Noe stole millions from Ohio workers and used it to help elect a governor who became the first convicted criminal to lead Ohio and a President whose administration is even more corrupt than Richard Nixon's," said Damien LaVera, a spokesman for the DNC.

After Mr. Noe was indicted on separate federal charges in October on accusations he laundered $45,400 in Mr. Bush's re-election campaign, an RNC spokesman said his organization already returned money from Mr. Noe and his wife, and "will take other appropriate actions if the situation warrants it."

It's endless.

"It doesn't take a gun to rob someone,
just a Republican."

Billions For Iraq Reconstruction Unaccounted For

(CBS) NEW YORK

Some $8.8 billion dispersed for reconstruction efforts in Iraq is unaccounted for, says the U.S. official in charge of tracing it.

For a report to be broadcast this Sunday, Feb. 12, at 7 p.m. ET/PT, 60 Minutes correspondent Steve Kroft investigates the billions spent on reconstruction-related work, particularly money paid to a contractor, Custer Battles, now being sued for fraud.

Stuart Bowen, special inspector general for Iraq reconstruction, says $8.8 billion is unaccounted for because oversight on the part of the Coalition Provisional Authority, the entity governing Iraq after the war, "was relatively nonexistent."

The former No. 2 man at the Coalition's transportation ministry, Frank Willis, concurs.

"I would describe (the accounting system) as nonexistent."

Without a financial infrastructure, checks and money transfers were not possible, so the Coalition kept billions in cash to pay for its multitude of projects.

"Fresh, new, crisp, unspent, just-printed $100 bills. It was the Wild West," says Willis.

Such an atmosphere made it possible for billions to go missing and companies to defraud the Coalition.

Custer Battles, a company quickly formed after the war to get reconstruction contracts, goes on trial next week, accused in a whistleblower suit by an ex-employee of bilking the U.S. government out of $50 million.

"(Custer Battles) wanted to open fraudulent companies overseas and inflate their invoices to the U.S. government," says the whistleblower, Robert Isakson.

He says he refused to go along with the scheme and "two weeks later, apparently I heard they began exactly the fraud they described to me," he tells Kroft.

Willis remembers Custer Battles, which was formed by former Army Ranger Scott Custer and a failed congressional candidate, Mike Battles, who claimed to be active in the Republican Party and have connections to the White House.

"They came in with a can-do attitude, whether they could or not," he says.

"They were not experienced. They didn't know what they were doing."

They nevertheless got contracts and their work quickly drew complaints.

"They failed miserably," says Col. Richard Ballard of a $16.8 million contract Custer Battles got to secure the Baghdad Airport.

Col. Ballard, the inspector general for the Army in Iraq at the time, says the company failed to provide the X-ray equipment required by the contract.

"These were multi-million-dollar devices for which they received a considerable cash advance so that they could procure them, and then they never procured this equipment," says Ballard.

On a bomb-sniffing dog and trainer Custer Battles did procure, Col. Ballard says, "I think it was a guy and his pet, to be honest with you," he tells Kroft. The colonel noted that the dog "would refuse to sniff the vehicles."

In a memo obtained by 60 Minutes, the airport's director of security wrote to the Coalition:

"Custer Battles has shown themselves to be unresponsive, uncooperative, incompetent, deceitful, manipulative and war profiteers. Other than that, they are swell fellows."

Instead of removing Custer Battles, the Coalition praised them and continued to give them contracts.

One of those contracts involved procuring trucks for moving cash around the country -- some of which were inoperative and had to be delivered via tow truck.

"I don't really know (how they got away with it)," says British Col. Philip Wilkinson, to whom the trucks were delivered.

"The assumption that we had was that they had to have high political top cover ..."

Custer and Battles are now under federal investigation and declined to be interviewed.

But in taped depositions, they disavowed any knowledge of fraudulent invoices outlined in the lawsuit.

Iraq, the bottomless pit, the cash cow.

"It doesn't take a gun to rob someone,
just a republican."

George W Bush's folksy claims that God is with him and that anyone against him is a troublemaker - if not part of an empire of evil - is irksome to genuinely religious people.

The Roman empire was finally brought down by costly wars on its periphery.

At the end of the day, China, Japan and India will have their factories and their production lines and will have people who are richer and able to afford the goods they are producing, and even be able to trade with each other.

The Americans will have their debts and lots of dollars to testify to a great capitalism whose virtues they ignored.

A dangerous empire of US debt

News about the US accounts with the rest of the world should cause grim pause for thought.

They show that the United States is digging itself deeper and deeper into debt, with the potential for the global financial equivalent of a nuclear meltdown growing ever closer.

By KevinRafferty

Friday, February 17, 2006

News about the US accounts with the rest of the world should cause grim pause for thought.

They show that the United States is digging itself deeper and deeper into debt, with the potential for the global financial equivalent of a nuclear meltdown growing ever closer.

Trade figures for 2005 show that the US deficit soared to reach more than $725 billion, thanks to rising oil prices and the growing influx of imports from China.

The deficit with China alone was $202 billion.

US imports are almost 60 percent larger than exports and the trade deficit is 5.8 percent of US national income.

The current account deficit, a more comprehensive measure of financial flows, is larger still at a whopping 6.5 percent of US national income.

New estimates of the budget deficit showed the government also going deeper into hock, thanks to the swelling costs of the war in Iraq.

The budget deficit is likely to reach $400 billion.

The Bush White House predicts the deficit will reach $423 billion.
Harry

http://www.brillig.com/debt_clock/

U.S. NATIONAL DEBT CLOCK

The Outstanding Public Debt as of 17 Feb 2006 at 02:09:40 AM GMT is:

$8,240,945,031,390.97

The estimated population of the United States is 298,545,465 so each citizen's share of this debt is $27,603.65.

The National Debt has continued to increase an average of $2.21 billion per day since September 30, 2005!

(thanks to "Slo" in alt.politics.bush)

A man enters a bar, & orders a drink from a robot bartender.

The robot serves him a perfectly prepared cocktail, & asks him,
"What's your IQ?"

The man replies: "150", & the robot starts conversation about global
warming factors, quantum physics and spirituality, biomimicry,
environmental interconnectedness, string theory, nano-technology, and
sexual proclivities.

The customer is very impressed, thinking, "This is really cool".
Deciding to test the robot, he walks out of the bar, returns, & comes
back in for another drink.

Again, the robot serves him a perfectly prepared drink & asks "what's
your IQ?"

The man responds, "about 100 or so". Immediately the robot starts
talking, but this time, about football, NASCAR, baseball, supermodels,
favorite fast foods, guns, & women's breasts.

Really impressed, the man leaves the bar, deciding to give the robot
one more test. He heads out, returns, & the robot serves him and asks,
"What's your IQ?"

This time, the man replies, "Er, 50 or 60, I think."

The robot leans over & says... (very slowly).

"So.............. ya gonna vote for Bush again?"

2809. [Not even] Conservatives Endorse the Fuhrer Principle

Newsgroup: rec.radio.shortwave
Date: 2006-02-17 15:01:06 UTC
From: David <rickets@knac.com>
Message-ID: <v7pbv11atueoqialb3qdib8eq3pbaf7lr5@4ax.com>
Source record: 63211

February 17, 2006
Conservatives Endorse the Fuhrer Principle
Our leader ï¿½ber alles
by Paul Craig Roberts
Last week's annual Conservative Political Action Conference signaled the transformation of American conservatism into brownshirtism. A former Justice Department official named Viet Dinh got a standing ovation when he told the CPAC audience that the rule of law mustn't get in the way of President Bush protecting Americans from Osama bin Laden.

Former Republican congressman Bob Barr, who led the House impeachment of President Bill Clinton, reminded the CPAC audience that our first loyalty is to the U.S. Constitution, not to a leader. The question, Barr said, is not one of disloyalty to Bush, but whether America "will remain a nation subject to, and governed by, the rule of law or the whim of men."

The CPAC audience answered that they preferred to be governed by Bush. According to Dana Milbank, a member of the CPAC audience named Richard Sorcinelli loudly booed Barr, declaring: "I can't believe I'm in a conservative hall listening to him say Bush is off course trying to defend the United States." A woman in the audience told Barr that the Constitution placed Bush above the law and above non-elected federal judges.

These statements gallop beyond the merely partisan. They express the sentiments of brownshirtism. Our leader ï¿½ber alles.

Only a few years ago this same group saw Barr as a conservative hero for obtaining Clinton's impeachment in the House. Obviously, CPAC's praise for Barr did not derive from Barr's stand on conservative principle that a president must be held accountable if he violates the law. In Clinton's case, Barr's principles did not conflict with the blind emotions of the politically partisan conservatives demanding Clinton's impeachment.

In opposing Bush's illegal behavior, Barr is simply being consistent. But this time, Barr's principles are at odds with the emotions of the politically partisan CPAC audience. Rushing to the defense of Bush, the CPAC audience endorsed Viet Dinh's Fuhrer Principle over the rule of law.

Why do the media and the public allow partisan political hacks, like Viet Dinh, to define Bush's illegal actions as a national security issue? The purpose of the Foreign Intelligence Surveillance Act is to

protect national security. FISA creates a secret court to which the president can apply for a warrant even after he has initiated spying. Complying with the law in no way handicaps spying for national security purposes. The only spying handicapped by the warrant requirement is spying for illegitimate purposes, such as spying on political opponents.

There are only two reasons for Bush to refuse to obey the law. One is that he is guilty of illegitimate spying for which no warrant would be issued by the FISA court. The other is that he is using "national security" to create unconstitutional powers for the executive.

Civil libertarian Harvey Silverglate writing in the Boston Phoenix says that Bush's grab for "sweeping, unchecked power in direct violation of a statute would open a Pandora's box of imperial possibilities." In short, it makes the president a dictator.

For years, the Republican Federalist Society has been agitating for concentrating more power in the executive. The members will say that they do not favor a dictator, just a check on the "imperial Congress" and "imperial judiciary." But they have not spelled out how the president can be higher than law and still be accountable, or, if he is only to be higher than some laws, but not other laws, and only in some circumstances, but not all circumstances, who draws the line through the law and defines the circumstances.

On Feb. 13, the American Bar Association passed a resolution belatedly asking President Bush to stop violating the law. "We cannot allow the U.S. Constitution and our rights to become a victim of terrorism," said bar association president Michael Grecco.

The siren call of "national security" is all the cover Bush needs to have the FISA law repealed, thus legally gaining the power to spy however he chooses, the protection of political opponents be damned. However, Bush and his Federalist Society Justice Department are not interested in having the law repealed. Their purpose has nothing to do with national security. The point on which the regime is insisting is that there are circumstances (undefined) in which the president does not have to obey laws. What those circumstances and laws are is for the regime to decide.

The Bush regime is asserting the Fuhrer Principle, and Americans are buying it, even as Bush declares that America is at war in order to bring democracy to the Middle East.

Albert Gore Jr. is a mentally retarded twit who can't quite seem to get over the fact that he lost an election.

Hell, the folks in his own 'home state' didn't even seem to want him. Reason being, the good people of the State of Tennessee know a damn 'tard boy when they see one.

The only reason its newsworthy is due to the desperation of the leftist media. There having a pissy fit because Cheney choose Fox over the other commie news outlets. Seeing how the media has treated this administration I wouldnt give them the time of day either. Sounds like Whittington will be out soon, then what will you pussys whine about?

They should be charged for not having the stamps, anyone else would. Though
the Texas DNR said it was a new and not very well comunicated
law and they would probably issue warnings. The ranch owners should have
know this and had stamps for them on arrival.

Source record: 63225

Here's a free hint: Bob Taft has no political power
as governor. He hasn't had any real political power
for about 2-3 years now. He's not conservative
enough for the conservative wing of the Republican
Party, and he's not liberal enough for the Democrats
and the moderate wing of the Republican Party.
He also doesn't have the charisma required of
a chief executive, which becomes a problem when
you can't depend on a political base.

Bob's political power took a tailspin when his
first attempt at trying to get Ohio to pass the Third
Frontier Initiative to allow Ohio to take out bonds
to invest in infrastructure and education and high
tech jobs failed miserably. Being constrained by
the higher costs of medicare and medicaid,
education requirements due to education lawsuits
and the requirement of a balanced budget in Ohio
has made Bob a fairly unpopular guy among many
people. The only reason why he wasn't voted out
of office last time is because the Democratic Party
doesn't have anyone who can run for statewide
office and win; the excesses of the Dick Celeste
administration in the late 80's-early 90's (the bumper
sticker you used to see around here was "Dick
Celeste - Before He Dicks You!") kind of
overshadowed any potential democratic successors.

That's the reactionary straw man.

Thinking Americans want to know why Cheney wasn't interviewed at the
time of the incident. Has nothing to do with pissant Fox News.

All the Kingï¿½s Men

The latest ripple of dissent in Washington, D.C. comes from Paul Pillar, former CIA National Intelligence Officer for Near East South Asia from 2000 to 2005. Pillar writes in the forthcoming issue of Foreign Affairs that regarding Iraq,

ï¿½it has become clear that official intelligence analysis was not relied on in making even the most significant national security decisions, that intelligence was misused publicly to justify decisions already made, that damaging ill will developed between policymakers and intelligence officers, and that the intelligence community's own work was politicized.

Damaging ill-will. Intelligence work politicized. Funny, this sounds a lot like what the former assistant to Secretary of State Colin Powell said late last year. Retired Colonel Larry Wilkerson related how Vice President Dick Cheney and Defense Secretary Donald Rumsfeld ï¿½somehow managed to hijack the intelligence decision making process.ï¿½ Wilkerson stated in his October 2005 coming out speech at the New American Foundation,

The case that I saw for four-plus years was a case that I have never seen in my study of aberrations, bastardizations, perturbations, changes to the national security decision-making process. What I saw was a cabal between the vice-president of the United States, Richard Cheney, and the secretary of defense, Donald Rumsfeld, on critical issues that made decisions that the bureaucracy didn't know were being made.

Actually, itï¿½s not funny at all. Paul Pillar at CIA and Wilkerson at State both echoed observations published in July 2003, when I reported what I had seen while serving in the Pentagon Office of Secretary of Defense Near East and South Agency policy directorate. I spoke then of the functional isolation of career experts, and of operational deference to ill informed and ideologically blind but ï¿½politically correctï¿½ Bush appointees. I wrote of groupthink and cross-agency neoconservative ï¿½cliques.ï¿½ The December 2003 issue of The American

Conservative ran a detailed three part series that explained exactly how things worked in Pentagon Near East South Asia policy making. Salon.com also ran a shorter version of this report a few months later.

So I was not shocked when Knight Ridder, that last bastion of tough, old-school investigative reporting in America, ran a story last week detailing abusive personnel practices and ï¿½a political vendetta against career Foreign Service and Civil Service (personnel) by political appointees,ï¿½

Reorganization ï¿½ badly needed in many instances in the CIA, State Department and the upper reaches of the Pentagon ï¿½ was pursued as a convenient way to eliminate intellectual adversaries who got in the way of the neoconservative agenda. Anyone who dared to speak out became political road kill.

One might ask, what is the neoconservative agenda, and why does it matter? Isnï¿½t it as good as any other for this country, especially now? In this very column, the neoconservative policy, in the Middle East at least, has at times been framed as a simple elaboration and extension of the old Carter Doctrine.

Neoconservative-sounding military and economic interventionism cloaked in the goodthink of universal democracy and human values has been called forth by the White House in previous sequences of the American story. The post-Cold War years happen to be only the most recent incarnation of this outward-looking, globally hungry philosophy.

So whatï¿½s wrong with the Commander-in-Chief ensuring his foreign and war-fighting policy makers share his vision, his world view, and do his bidding as he sees it? Is there anything inherently wrong with this ï¿½three bags fullï¿½ approach to foreign interventions, foreign wars, and global pursuit of Presidential interests?

Sadly, the answer is no, there is not. The will at the pinnacle is dutifully enforced in dictatorships, totalitarian regimes, oligarchies, single party governments as existed in old style Communist countries, or in absolute monarchies. This is what we are experiencing in Washington today. Loyal political operativesï¿½policy wonks driving the governing system expect reward. They expect to be strategically positioned, preferably close to centers of power. Dissenters and naysayers can expect to be ousted, and even punished.

As Thucydides observed, ï¿½The strong do what they will and the weak suffer what they must.ï¿½

Of course, constitutional republics ï¿½ by definition incapable of empire and reluctant to place excessive power in a single individual ï¿½ have never been part of this happy family of dictatorships, single party systems, autocratic states, and monarchies.

Complaints, after-the-fact of political and institutional malfeasance throughout the executive branch in Washington are useful for historical analysis. They produce records that comprise the post-crime scene forensic evidence of an American republic recently deceased.

Hereï¿½s how it happened historians will say. A great nationï¿½s foreign policy was politicized, personalized and rendered trivial through extensive use of apparatchiks and an American-style nomeklatura. The kingï¿½s opponents were removed, bypassed and eliminated. They suffered personal attacks calling them traitors or worse, home-grown policy terrorists.

Today, the American president drifts inexorably towards a disastrous, illegal and unnecessary military confrontation with Iran, driven by artificial national security machinations. As with the illegal, artfully contrived invasion of Iraq and its subsequent occupation, Bush will once again pursue the kind of ï¿½creative destructionï¿½ associated with neoconservative theorist (and Karl Rove pal) Michael Ledeen.

Perhaps, in the end, forensic examination of our doomed national foray into absolute executive power will provide historians with a laugh or two. As undeniable evidence of our own national stupidity mounts and becomes increasingly frightening, we read that Vice President Dick Cheney shot and wounded 78-year old Harry Whittington, as he fired his shotgun into a flock of scattering birds.

We hope that both Mr. Whittington and our Republic will survive their encounter with the scatter shot policies of the current regime.

Those are all Ten-Tec's but the guy isn't talking about a Ten-Tec ham transceiver. I think the unit in question is a Japanese SW receiver something like a SSR-1, right?

I've seen them at yard sales and flea markets etc. but don't know who actually made them.

Tim.

DaviD - Let See . . .

Had the Vice President got shot in a Hunting Accident
that would be a Public Matter and News because he is
after all an Elected Public Official.

However - The Vice President 'accidentialy' shooting someone
while Hunting {Accident} is a 'private' matter related to that
Individual and not necessarily 'news' : Because - We All Believe
In an Individuals Right-to-Privacy under the US Constitution !

-OR- DaviD - In 'your' America does the Right-to-Privacy
Only Apply to people 'you' like and not to Every American
Citizen; and may I remind 'you' once again that both the
President and Vice President are both American Citizens
with the "Individual Rights" of Every American Citizen;
inspite of being Elected to Public Office.

DaviD - What about Mr.Whittington's Individual Right-to-Privacy
under the US Constitution ?
-OR- DaviD Do 'you' think that 'your' Right-to-Know trumps
Mr.Whittington's Individual Right-to-Privacy ? ? ?
* Then Again - DaviD does the American Press' Right-to-Know
on behalf of the American Citizens trump Mr.Whittington's
Individual Right-to-Privacy ? ? ?
* DaviD - Why Won't "The Press" leave Mr.Whittington's alone
and RESPECT his Individual Right-to-Privacy ? ? ?
* DaviD - This is the very same Individual Right-to-Privacy that
the Liberal Democrats made such an Issue about in the last
two Supreme Court Judge 'nomenee' Hearings ! ! !

DaviD - Do 'you' Believe In An Individual's Right-to-Privacy ? ? ?
[As Guarranted By (IN) The US Constitution]

DaviD - Is an Individual's Right-to-Privacy "Settled-Law" ?

Question To : DaviD
Question To : All Left-Wingers in General
Question To : The Liberal Media Elite
Question Especially To : The Apparatchik of
the Democrat Party of the USA
http://en.wikipedia.org/wiki/Apparatchik
* Do 'you' Believe In An Individual's Right-to-Privacy ? ? ?
[Equal and Full Civil Rights for All American Citizens]
* Do 'your' Political Enemies Have A Right-to-Privacy ?

* Do All People Have A Right-to-Privacy -or- Only Those 'you' Like ?
-OR- Is the "Right-to-Privacy" Just Another Buzz Word
in the Liberals Bag of Lies ? ? ?

i want to know ~ RHF

"Mideast firm's deal at Port Newark stirs terrorism concerns

Friday, February 17, 2006
BY RON MARSICO
Star-Ledger Staff

A deal that will allow a Middle Eastern company to take over some port operations along the East Coast, including a section of Port Newark, has a group of lawmakers worried about security.

The seven lawmakers, including U.S. Sen. Frank Lautenberg (D-N.J.), want the Bush administration to reconsider its approval of the $6.8 billion deal,

under which Dubai Ports World, based in the United Arab Emirates

(Heavy Contributors to the RNC)

, would take over half the operations of a terminal at Port Newark.

MR - There are Eye-Witnesses and then there are eye-witnesses !

First - Some Eye-Witnesses are directly involved in the scene
like a Passenger in a Car Accident or Bank Teller being Robbed.

Second - Most Eye-Witnesses are indirectly involved in the scene
like a neighbor watching someone fall-off a ladder or another Driver
watching an Auto Accident between two other cars.

Third - Other Eye-Witnesses are remotely involved in the scene
like someone in a crowd of people or someone in the general
area when an Accident occurs and can usually can give
testimony to what happen right after the Accident.

MR - The simple truth is that Armstrong was out in-the-field with
the Hunting Parties and was in-fact an Eye-Witness of sorts [.]

I think this radio introduced the "portatop" class of SW radios and
influenced the layout design of Drake's SW8. I have had one of these
for several years (bought from someone in this NG, actually).
This radio is hard to beat for audio quality due to its two speakers
(the 3" one on the front and the 7" one on top). SSB uses the BFO
method, which can be fussy to operate, especially on weak stations. I
had to perform an AGC mod on mine as there was too much pumping
(replacing the AGC cap by a larger one fixed that).
If you get one in good condition, and the one on auction appears to be,
you will be happy with it.

2859. OT: Kyoto's Quiet Anniversary

Newsgroup: rec.radio.shortwave
Date: 2006-02-17 19:33:57 UTC
From: MnMikew <mnmiikkew@aol.com>
Message-ID: <45mmp6F7bt9eU1@individual.net>
Source record: 63261

Global warming alarmists marked the Kyoto Protocol's first anniversary in subdued fashion this week. The treaty so far has been a failure and its future doesn't appear much brighter.

As tallied up at JunkScience.com courtesy of the global warmers' own data, Kyoto is estimated to have cost about $150 billion so far, while only hypothetically reducing the average global temperature by 0.0015 degrees Centigrade.
At that rate, it would take 667 years and cost $100 trillion to hypothetically avert just 1 degree Centigrade of global warming.
But such infinitesimal estimates of averted global warming would only apply, of course, if Kyoto's signatories actually complied with its provisions.
They are finding it virtually impossible to even do that.
Kyoto obligates the European Union to reduce greenhouse gas emissions by 8 percent from 1990-levels by 2012. But the European Environmental Agency projects that EU greenhouse gas emissions in 2010 will be 7 percent above the 1990 levels.
The Russian news agency Novosti took a charitably long-term view of Kyoto noting, "Many people question the effect of the measures outlined by the Kyoto Protocol on the climate. Today, the concentration of greenhouse gases in the atmosphere is approximately 370 PPM (units of these gases per million units of the air).
"In 2012, as compared with the base year of 1990, their concentration will increase by 18 PPM, if the Kyoto measures are not carried out, or by 16-17 PPM, if they are implemented. It transpires that the effect of these measures on the climate is a mere 1-2 PPM. This fact allows the critics of the Kyoto Protocol to describe it as ineffective. But experts maintain that a reduction by even 1 PPM is quite good, considering that the task of stabilizing greenhouse emissions in the atmosphere has been set for a hundred years, not for five."
I doubt that world leaders, however, will perpetually sacrifice 2 percent or more of their nations' annual economic growth, year after year, for no tangible benefits.
While Kyoto's failure may be news to the public, it's not to former vice president and global-warmer-in-chief Al Gore, who smugly admitted on Jan. 4 at a political gathering that included yours truly, "Did we think Kyoto would work when we signed it [in 1997]?... Hell no!"
Gore explained that the actual point of Kyoto was to demonstrate that international support could be mustered for action on the environment - quite an expensive political exercise.
A year into Kyoto, global warmers seem to be focusing more on melodrama than science.
There's NASA scientist Jim Hansen's claim, first reported in the New York Times, that the agency is trying to "silence" him by asking to preview his

lectures, papers and Internet postings before he goes public. To Hansen, this "seems more like Nazi Germany or the Soviet Union than the United States."

Hyperbole aside, Hansen cannot credibly claim to have been censored on global warming. He first sounded the climate alarm in 1988 congressional testimony and has since been quite outspoken on the topic. He gives more speeches than the agency's head, according to NASA.

Hansen's problem isn't that anyone is trying to silence him; it's that he has a track record of being wrong - for example, overestimating 1990s warming by 200 percent.

Then there's the new Al Gore movie - a documentary production of his global warming lecture and slide show - that was recently screened at the Sundance Film Festival. The movie's promotional material features penguins trekking as in the hit documentary "March of the Penguins" - but across a desert rather than Antarctic ice.

To those unfamiliar with the global warming controversy, Gore's one-sided movie may appear compelling. Pictures of melting glaciers, ominous temperature graphs and cartoons for the science-impaired - one features Mister Sunbeam trapped by the Greenhouse Gas bullies - give the impression that the planet is doomed unless we cede control to global warming alarmists.

"We are recklessly, mindlessly destroying the Earth. As Lincoln said, 'We must disenthrall ourselves. And then we will save our country.' And our planet," Gore said in a statement.

"Reckless" and "mindless" are certainly some of the terms that occurred to me after watching Gore's slide show. Some glaciers are receding, but others (omitted from his slides) are advancing. No one knows what causes glaciers to advance and retreat - the physics are complex and much more is involved than simply air temperature.

University of Virginia climatologist Pat Michaels points out, for example, that, "Glaciers [in Glacier Bay National Park, Alaska] have been receding ever since John Muir first publicized them in the 19th century" - well before the advent of significant manmade greenhouse gas emissions.

Gore's graphs imply that increases in atmospheric carbon dioxide historically have preceded increases in global temperature. But a 2005 study in the journal Science reported that higher temperatures may actually have preceded increased carbon dioxide levels in the past - the opposite of the global warming hypothesis.

Were that fact mentioned in Al Gore's movie, the Kyoto Protocol might not survive its second anniversary.

Consider the fact that now they tend to hire people at the lowest wages possible while these people basically know nothing of electronics. It used to be that ham radio operators, electronic experts, and those knowledgable in electronics ran the stores. Now it's just an undereducated kid saying "Do you want a cellphone with that shortwave radio?"

I'll tell you a personal story. A few years ago I went in there to look at one of the shortwave radios they had as an offering. As many of you know, they used to sell Sangean radios stamped with the Radio Shack brand. Anyway, So I went in and asked a salesperson if a particular brand has SSB capability. He said "Yes, it does." Well I took a better look at the radio and did not see a switch for SSB or a button. Came back home and researched the model number and nothing of the sort came up. If you do buy anything there, it is best to know what you want and go get it. Because otherwise their help isn't much good. It is a shame too considering they were once a well thought up company. Say 30 years ago and more.

The K7RA Solar Update

SEATTLE, WA, Feb 17, 2006--Average daily sunspot numbers this
week rose by more than 7 points to 9, but this doesn't mean much.
The Space Environment Center's Daily Solar Data show how many
days with a blank sun were noted over the past 30 days. Expect to
see even longer stretches with no sunspots over the next year. A
couple of years from now we should see a new Cycle 24 rising
faster than this old one declined.

Scientists have known about sunspots for quite a while, and
Galileo sketched them in the 17th century. The coolest part is the
arrangement of the sketches into a sort of flip-book animation,
which you can view with any media player such as Windows Media
Player or Apple QuickTime. This gives us a reproduction of what
the sun was doing over the 35 days that Galileo made these
sketches. What a remarkable thing!

The ARRL International DX Contest (CW) is this weekend. Sunspot
854 is pointing straight at us, but it is tiny. Look for sunspot
numbers and solar flux to rise only slightly, if at all, and for quiet
geomagnetic conditions.

Based on the previous solar rotation, Wednesday, February 22
looks like it may show some fairly active geomagnetic conditions.
Geophysical Institute Prague predicts slightly different conditions,
with February 19 unsettled to active, and February 21 and 22 just
unsettled. The prediction is for quiet geomagnetic conditions Friday
and Saturday, February 17 and 18, only slightly unsettled geomagnetic conditions
on Sunday,
February 19, and quiet to unsettled geomagnetic conditions February 20 and 23.

For more information concerning propagation and an explanation of the numbers
used in this
bulletin see the ARRL Technical Information Service Propagation page. An archive
of past
bulletins is on the ARRL Web site.

Sunspot numbers for February 9 through 15 were 24, 13, 11, 0, 0, 0 and 15, with
a mean of 9.
The 10.7 cm flux was 74.8, 75.2, 76, 76, 76.3, 77.3, and 78.5, with a mean of
76.3. Estimated
planetary A indices were 2, 2, 6, 3, 2, 1 and 12, with a mean of 4. Estimated
mid-latitude A
indices were 2, 2, 4, 2, 2, 1 and 7, with a mean of 2.9.

I'm sorry but you are going to have to get off this denial about WMD as there are video tapes of Saddam and his top aids admitting they had them and were lying to the UN weapon inspectors about them.

Getting away from your niche market has killed a lot of businesses over the years. Look at the spectacle when Coca Cola came out with the new Coke in 1985 or so. I remember the outcry about that. You still have some pretty good shortwave radio outfits that cater to hams and shortwave listeners. But in general consumer electronics are good to buy from say Circuit City, Best Buy or even some smaller outfits when it comes to customer service.

I find that Mouser, Newark, and sometimes even Allied even though it is own by Radio Shack are good places to get parts. But go to a Radio Shack and ask about capacitors, resistors, or diodes, etc. You'll get the duh look and it's best to move along!

More proof that Bush cares little about terrorism. He only cares when it
came time to get re-elected.

If you're lucky, you'll get an old timer as a manager who
knows his stuff, but that's more and more the exception
rather than the rule. When I worked there (a 8 month
stint in 91-92), they were starting to emphasize the need
for MBAs as managers.

I don't know about Salon, as they charge a fee. The other 2 have a
mix of opinion (which is not news), links to weblogs (also not news),
and links to MSM stories, ala Drudge.

Truth exists without facts sometimes.

We had a lot of rain (thunderstorms) yesterday and it was around 34 or so. Today temps are falling (currently 22 and partly cloudy).

Tonight temps are slated to be from 0 to 5 degrees.

Spring is on its way!

DaviD - Last time I looked it up both the US Secret Service
and FBI both qualify as Law Enforncement Organizations.

DaviD - The Federal Government Secret Service and FBI
along with the Department of Justice has Primary
Jurisdiction for any an all Investigations related to the
President and Vice President.
Note - It has been that way ever since the Secret Service
was assigned responsibility for the Protection of the
President under law by Congress and since the FBI was
created by Congress.

DaviD are 'you' now talking about the Right-Kind of Police
that are "Approved" by the Democrat Party of the USA to
Investigate Any-and-All Crimes-Against-the-People ?

david - the truth will set 'you' free - be free ~ RHF

Yes there are video tapes. I though YOU were smarter than that.

I didn't say that CNN or any of the others are not filtered. Of course, you like to put words into the mouth of others. Of course, that doesn't make everything you say to be true either. There is always more than one perspective on an issue. Not just the one that you believe. Fox News may be telling you the truth at times and at other times, it may be bogus information.

Same goes for CNN, NPR, MSNBC, CNNFN, Reuters, BBC, or any other news outfit. Unlike some I tend to keep an open mind before puffing off the alleged facts. I am sure that you take Bill O Reilly and Sean Hannity as the gospel truth as well at least for the so-called conservative movement in this country. Which in fact, is less than conservative and more in the way of big bloated bureaucracy.

See how Mr. President has bloated the federal deficit from 5.7 trillion in 2000 up to 8.1 trillion today. That's an increase of about 40 percent. Even under Clinton's regime the deficit only grew 1.4 trillion. Bush has doubled Clinton's deficit thus far and only 5 years into his term. This from a so called fiscal conservative and compassionate conservative.

What a hoot. To hear all of you so called conservatives running around telling how your self appointed Messiah is doing such a great job.

Where's this cheap oil at. Since 1999 I have seen the average gas prices go from 77 cents a gallon almost 3 dollars a gallon. Oil prices spiked at 68 a barrel. Now approxmiately 60. It was in the 40s a few years ago. That's cheap oil?

Not to mention that the oil problem is going to get worse as supplies decrease over the next few decades. But of course, your masters don't want you to realize alternatives because that would make us independent of the oil barons. So when it hit's 80 dollars a barrel or 100 a barrel someday, then you'll really feel the pain.

Seeing how this administration has lied to the media, you can hardly blame
them for being incredulous. "WMD's"; "The Iraqi oil will pay for the war";
"Scooter Libby had nothing to do with the CIA leaks". Cheney dodged the
sheriff's investigators until the following day. Now the only evidence that
he wasn't intoxicated is his word. In other words, he skirted the law.

As long the left continues to insist on perpetuating lies such as "Bush
lied about WMD" and that the war in Iraq is a sham of sorts then they
will continue to marginalize themselves. You can not win these arguments
so do yourself a favor and find another subject or by all means continue
to fail. Focusing on non-stories like the Cheney hunting accident will
not help the liberal cause. Please provide some intelligent thinking as
expected from the elite political sector. Liberals thinkers prove to be
their own worst enemy on a daily basis.

Then why did Cheney dodge the law? Why did he (through his friend) blame the victim? Why didn't he notify the White House? Why didn't he notify his press secretary and have him issue a statement? did he think he could keep it all hidden? Yes it was a simple accident, and people can handle that. So why does he have to behave like a criminal?

Greg

2929. KVTA Morning Show Host Dave Ciniero Dies

Newsgroup: rec.radio.shortwave
Date: 2006-02-17 22:44:09 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>
Message-ID: <telamon_spamshield-4B9464.14440917022006@newsclstr02.news.prodigy.com>
Source record: 63330

Dave was a talented force of nature on this small local station in Ventura County since before I moved here. I tuned in many mornings and he has always been there. It will be strange not to hear him anymore.

Besides being a radio personality he was very involved in the community and fomented many, charitable drives. The station is taking calls in remembrance of Dave and it has been sad to listen to many people expressing their grief.

You would think it would be really cheap with all the oil flowing in from
the secret pipeline.

Somehow you seem to believe these alternatives are going to appear
overnight. Nobody is arguing that we need to ween ourselves from our oil
addiction but its not going to happen anytime soon. Hybrids are a start, as
is E85 but theres a long ways to go. Could it hit 80-100? Sure. It could
also fall to 40 just as easy. Perhaps you missed the SOTU address when Bush
mentioned this.

It was around 1992 that I was trying to fix a reel to reel tape recorder
with tubes, and I went into the store to ask where their tube tester was. I
got a blank look from the young girl and found out though another worker
that they had discontinued the tube tester device. Oh well, that's my "duh"
experience.

The one night I was monitoring, it varied. On 40 meters the listening
freq stayed at 7090. When they were working in the low end of 40 (no
US SSB) they were usually 5-10 up for call. They also gave a 5-10 kc
range for a while when they moved the call frequency to the US part of
the band (around 7240). That was a mess so for a short time they also
went by the zone #'s. Toward morning they switched to single
frequencies for calling eventually going to 7226 and that is when I
contacted them.

The best way to keep track of all this frequency hopping is to go to
one of the DX IRC sites where hams post the freqs they are monitoring
or have made contacts on. Do a search for "DX Summit" and that will
take you there.

Thanx for all the posts. I did a bit of reading on the net and found that it has amazing audio. If you have a good signal, it is fantastic. I've also read that it can overload when used with too big of an external antenna. I may just pick one up.... Haven't decided.

Thanx Again

Michael

You've obviously been cursed since you still have the mistaken belief that GWB somehow 'stole' the election.

He certainly 'stole' the show from the dumbass Liberals, however, he did not 'steal' the election.

Nice try again on your part, stem, but it just doesn't fly.

You've pinned the bullshit detector here once again.

Respect for the law is now a ''liberal cause''? Holding people
accountable is a ''liberal cause''?

This is a real shame. Radio Shack has strayed far from its roots - they no longer even sell Radio Shack brand radios!

But there's really nowhere else to go when you need a small electronic part such as an unusual adapter, different gauges of resin-core solder, audio-video cables, unusual batteries, etc. And if they go "belly-up" in your location, you're just out of luck. Sure you can buy from some of the mail-order companies (Allied Electronics - owned by Radio Shack, I believe - is particularly good) but you must wait for delivery and shipping charges can be somewhat high. It is often uneconomical to buy a small item from a mail-order house.

I hope they'll realize this and leave the digital cameras, computers,.cellular telephones, toys, and so forth, to other retailers and concentrate on being the best electronics store they once were.

Best,

Joe

And then Saudi Arabia #1 uses Saudi Arabia #2 to wreak havoc on the Mideast and the world. Saudi Arabia is a third world country that happens to have a lot of oil. In fact, they have half of the world's supply. So the entire world is desperate to kiss the asses of those who control the oil, ie the House of Saud. As long as the royals keep the oil flowing, the world doesn't care how the people are treated.

The people then get fed up, only to have Saud-funded terror groups eagerly awaiting them as an outlet for their anger. If the royals didn't use terror to deflect the popular anger towards the West and away from them, they'd find their heads chopped off. But now the Saud monster has started to eat its creators. They have made so many angry people, and encouraged that anger for so long, that the anger is too much for them to control, and it's spread to the entire Mideast and even Europe, and it threatens to destroy the world. But they keep feeding the monster, and the world just wants the oil.

The royal family is not one cohesive unit like the British royals. Each prince has his own sphere of influence, and they all work at cross purposes. That means that even if King Abdullah said tomorrow that he was cutting off terror funds, some of the princes would go on funding terror, and Abdullah wouldn't be able to do a damn thing about it because the way the royal family is set up the king doesn't have absolute control. There's a prince who keeps building ever more extravagant mansions with oil money, and the king can't stop him. The king can't stop other princes from shoveling money to Bin Laden, no matter how much the king fears him. Meanwhile, the people get poorer and see massive golden mansions rising above their concrete hovels. It's

only a matter of time until the Saudi humpty dumpty falls from its wall.

"Politicized" Intelligence and the CIA:
http://weeklystandard.com/Weblogs/TWSFP/TWSFPView.asp

Paul Pillar Speaks, Again
The latest CIA attack on the Bush administration is nothing new.
http://weeklystandard.com/Content/Public/Articles/000/000/006/713hkkee.asp

IN A BREATHLESS front-page, above-the-fold article in today's Washington Post, Walter Pincus reports that a former senior CIA official named Paul Pillar accuses the Bush administration of "misusing" intelligence to take the country to war in Iraq. According to the Post account, Pillar uses a forthcoming article in Foreign Affairs to claim that the Bush administration "politicized" the intelligence on Iraq.

Bush administration policymakers did this subtly, Pillar says, by repeatedly asking the CIA questions about Iraq, its weapons programs, and its support for terrorism. This "politicization" was apparently so subtle that it escaped the notice of both the Robb/Silberman Commission and the bipartisan Senate Intelligence Committee report, which both found that no such politicization took place. If Pillar entertains the possibility that Bush administration officials asked tough questions because after September 11 they were genuinely concerned about the threat from Iraq, the Post article nowhere mentions it.

Pillar making claims about politicized intelligence is rich. In a column published September 27, 2004, Robert Novak identified Pillar as a speaker at a private dinner in California. Pillar's "management team" at the CIA, where he was employed as the national intelligence officer on the Near East/South Asia desk, approved the appearance. According to Novak, the ground rules for the speech were based on the "Lindley Rule," which holds that the speaker, his audience and the event are not to be disclosed, "but the substance of what he said can be reported." That substance, apparently, was a harsh assessment of the Bush administration's handling of Iraq.

Think about that: A senior, unelected CIA official--Paul Pillar--was given agency approval to anonymously attack Bush administration policies less than two months before the November 2, 2004, presidential election. That Pillar was among the most strident of these frequent critics--usually in off-the-record speeches to gatherings of foreign policy experts and business leaders--was well known to his colleagues in the intelligence community and to Bush administration policymakers. His was not an isolated case; CIA officials routinely trashed Bush administration policy decisions, often with official approval, in the months leading up to the Iraq War and again before the election. Pillar, who had complained to a CIA spokesman that someone had violated the ground rules by providing his name to Novak, simply got caught.

According to the Washington Post, Pillar's forthcoming critique will be "the first time that such a senior intelligence officer has so directly and publicly condemned the administration's handling of intelligence." Nonsense. In recent weeks, Pillar has trashed Bush administration policies to the Los Angeles Times and reporters for the Knight-Ridder newspaper chain. And before that, Pillar put many of these condemnations in a book. The relevant sections were published more than two years ago. Not exactly breaking news.

The book is called Terrorism and U.S. Foreign Policy, and it was originally published in 1999 [During the Impeached Clintoon administration: remember "Able Danger".] by the Brookings Institution. A new edition, with an updated introduction, was published on January 1, 2004. Pillar uses the new introduction to accuse the Bush administration of misleading the U.S. public by dishonestly conflating the war in Iraq and the broader war on terror. It is exactly the kind of critique one might expect from an analyst who had long sought to downplay the role of states in terrorism. Terrorism, in Pillar's view, is something to be managed, not something to be fought and certainly not something to be defeated. From this follows Pillar's conclusion that military force is usually a counterproductive in managing terrorism. Reasonable people can agree or disagree with these views, but even as he articulated them in 1999, they are plainly odds with Bush administration policies and the global war on terror.

PILLAR USES HIS 2004 introduction to accuse the Bush administration of misleading the public to war in Iraq. The American public developed a mistaken sense about Iraq and al Qaeda, Pillar argues, through its "exposure to repeated mention of the two subjects in the same breath, to the many hints and suggestive references to links, and to the larger conceptual blurring that resulted from applying the term 'war on terrorism' to the fights against both al Qaeda and Iraq." Pillar cites polls showing that a majority of the American public believed Saddam Hussein had a role in 9/11. This misperception, he claims, was "the consequence of efforts to manipulate public perceptions to sell a policy undertaken for other purposes." Pillar does not say how President Bush's specific rejection of an Iraq-9/11 connection in the January 31, 2003, issue of Newsweek magazine--two months before the war--fit into this effort to manipulate public perception.

Pillar points to "a series of increasingly deadly vehicle bombs" in the summer of 2003 to criticize President Bush's postwar claim that Iraq was the central front in the war on terror. Pillar writes:

Such words may have more of an impact on popular perceptions than the fact that the terrorism in question was not anything the Saddam regime would have done if the United States had not gone to war, but instead something that the terrorists were doing because it had.

It is a revealing passage. Pillar confuses his analysis with "facts" and proffers a stunningly categorical claim about Iraqi intentions. How does Paul Pillar know what Saddam Hussein would or would not have done without a U.S. invasion of Iraq? For a conclusion as definitive as the one Pillar offers--a "fact" he calls it--Pillar must have had a lot of confidence in the quality of the intelligence he was seeing. This confidence was misplaced, according to the conclusions of the bipartisan Senate Select

Intelligence Committee's report on pre-war intelligence on Iraq, which concluded:

The Central Intelligence Agency (CIA) did not have a focused human intelligence (HUMINT) collection strategy targeting Iraq's links to terrorism until 2002. The CIA had no [redacted] sources on the ground in Iraq reporting specifically on terrorism.

(It is worth pointing out that Iraq's 1993 attempt to assassinate President George H.W. Bush included plans to use vehicle bombs. When Jabir Salim, the Iraqi ambassador to the Czech Republic, defected in December 1998, he told British intelligence that the Iraqi regime had provided $150,000 so that he might recruit and Islamic terrorist to detonate a truck bomb at Radio Free Europe headquarters in Prague.)

THE POST ARTICLE also tells us that Pillar accuses the Bush administration of "cherry-picking" intelligence to make its case. Others have made similar claims, not entirely without justification. Still, it is an especially odd charge coming from Pillar.

In his book, Pillar explores the U.S. missile strikes against the al Shifa pharmaceutical plant near Khartoum, Sudan. The Clinton administration attacked the plant on August 20, 1998, in response to the bombings of U.S. embassies in East Africa on August 7, 1998. In one lengthy paragraph, Pillar lays out the evidence:

Certain aspects of the security of the plant and public information about it suggested that it was engaged in more sensitive activity than just the production of pharmaceuticals; that a sample of soil collected outside the plant--unlike samples collected at other suspicious sites in Sudan--contained a chemical that is a precursor to the nerve agent VX (there are other conceivable reasons for the chemical to exist, but none that was a plausible explanation for it to be present at this location in Sudan); that there were reasons to believe the al Shifa plant was part of Sudan's larger Military Industrial Corporation, the center of Sudanese work on the development of weapons, including unconventional weapons; that bin Laden contributed financially to this corporation (part of his substantial ties with the Sudanese regime dominated by Hasan al Turabi's National Islamic Front); that there were other, more direct links between bin Laden and the management of the al Shifa plant; and that there were other intelligence reports that bin Laden's organization was attempting to acquire a chemical weapons capability (not to mention bin Laden's public statements suggesting the same thing).

Pillar omits several significant facts: the U.S. intelligence community had evidence that suggested the VX precursor (known as EMPTA) was of Iraqi provenance; the U.S. government had intercepted phone calls between administrators of that plant and an Iraqi chemical weapons expert named Emad al Ani; the CIA had intelligence that Iraqis had worked with the Sudanese, and through them bin Laden, to develop chemical weapons at several sites throughout Sudan.

Consider: In a January 23, 1999, article in the Washington Post, then-National Security Council counterterrorism director Richard Clarke, no friend of the Bush administration, defended the Clinton administration strikes on al Shifa and said that "intelligence exists linking bin Laden to al Shifa's current and past operators, the Iraqi nerve gas experts and the National Islamic Front in Sudan." In an email he sent on November 4, 1998, to National Security Adviser Sandy Berger and made public by the 9/11 Commission, Clarke concluded that the presence of Iraqi chemical experts in Sudan was "probably a direct result of the Iraq-Al Qaeda agreement," whereby bin Laden promised not to agitate against the Iraqi regime and Saddam Hussein pledged assistance on weapons development.

Senior Clinton administration and intelligence officials defend the strikes to this day by citing Iraqi connections to the plant. President Clinton's secretary of Defense, William Cohen, testified before the 9/11 Commission that there were "multiple, reinforcing elements of information ranging from links that the organization that built the facility [al Shifa] had both with bin Laden and with the leadership of the Iraqi chemical weapons program." Said Cohen: "The owner of the plant had traveled to Baghdad to meet with the father of the VX program."

In an interview with THE WEEKLY STANDARD in October 2004, former chairman of the National Intelligence Council, John Gannon said: "The consistent stream of intelligence at that time said it wasn't just al Shifa. There were three different [chemical weapons] structures in the Sudan. There was the hiring of Iraqis. There was no question that the Iraqis were there."

9/11 Commission co-chairman Tom Kean made the same points in a separate interview with THE WEEKLY STANDARD. "Top officials--Bill Clinton, Sandy Berger, and others--told us with absolute certainty that there were chemical weapons of mass destruction at that factory, and that's why we sent missiles." Kean added: "We still can't say for certain that the chemicals were there. If they're right and there was stuff there, then it had to come from Iraq. They're the ones who had the stuff, who had this technology."

How is it that Paul Pillar could write about the al Shifa attacks without making mention of the facts of Iraqi involvement with the plant? Simple: They are inconvenient to his theories about the relationships between states and terrorists.

Paul Pillar's political attacks on the Bush administration's use of intelligence are not particularly surprising. They are not entirely accurate and, given that he has leveled the same charges for years--both in private and in public--they hardly qualify as news.

My God, you are Dumb Dr. DaviD.

Antwar.com Editorial Director Dennis "Justin" Raimondo is a Neo-Fascist

http://www.discoverthenetwork.com/individualProfile.asp?indid=1894

Runs the website Antwar.com

Presents the Ba'athist party-states in Iraq and Syria as victims of the malicious West

States that September 11 was "an enormous defeat for the U.S.," and thus the source of President Bush's alleged "fascism" [Sounds just Like Dr. DaviD Rickets!]

Believes that the Great Satan is America, and the Little Satan is Israel

Author of The Terror Enigma, a pamphlet that insinuates, with no serious evidence, that the Israeli government had prior knowledge of 9/11 but failed to warn U.S. authorities

Dennis "Justin" Raimondo is a minor celebrity in the U.S., thanks to a 10-year career as an amateur demagogue in the libertarian milieu of the San Francisco Bay Area, a political environment where anything goes and nothing matters. He has the familiar personality traits of the type: "sentimental formlessness, absence of disciplined thought, ignorance combined with gaudy erudition." He poses as a conservative but runs a website, "Antiwar.com," that features anti-Americans like Noam Chomsky and is hugely popular with the left - not surprisingly since it views America as an incipient fascist state.

Raimondo is a confused and confusing person, who seeks to be the master of the confusion he creates. Born plain Dennis, he renamed himself Justin, while attending the Cherry Lawn School, a defunct prep school in Darien, Conn., which he graduated in 1970.

Raimondo unquestionably encompasses many contradictions. Now past 50, he features a photo of himself on his website with a cigarette dangling from his mouth, in a fey (and failed) pose as an homme fatale. He is flamboyantly gay, but promotes himself as a Buchananite conservative and was in fact Buchanan's San Francisco campaign spokesman during the "culture war" that other gays took personally, many elections ago. The entire package is deceitful, and it is a calculated deceit.

The movement that Raimondo has cobbled out of opponents of the Iraq war, who are drawn into his site, is unabashedly fascist. Justin Raimondo personifies an American "red-brown" alliance, like the one that surfaced briefly in the 1930s when Communists and Nazis combined forces to bring down the Weimar Republic. This alliance was revived after the fall of Russian Communism, when Stalinists and fascists around the world united on an old platform - war against the Jews - of which more will be said further on.

Raimondo's own understanding of fascism - a word he himself throws carelessly around when defaming political enemies and disarming potential critics -- is utterly superficial. In a preposterous column titled "A Fascist America," (March 3, 2005), he defines fascism as follows:

1) "The idealization of the State as the embodiment of an all-powerful national will or spirit;

2) "The leader principle, which personifies the national will in the holder of a political office (whether democratically elected or otherwise is largely a matter of style);

3) "The doctrine of militarism, which bases an entire legal and economic system on war and preparations for war."

Of course. applied to America this is absurd. Outside the neo-Nazi fringe, no Americans, least of all Republicans, idealize the state. The "leader principle" is not only not in evidence, it is almost absent in a political season when the President has been attacked more viciously than any chief executive in memory; and it is pretty difficult to refer to American "militarism" when the country's security rests on a military that is voluntary and under attack. In the same column, while attempting to draw a parallel between opponents of the anti-war crowd and fascists, Raimondo even lends credibility to Hitler's fairy tale that the Nazi seizure of power was a response to "the imminent danger of Communist revolution" - a particularly absurd assertion since the Communists actively colluded with the Nazis in their attacks on Weimar's democracy and passively supported Hitler's accession to power.

In an attempt to smear America even further (as if that would be possible) Raimondo throws in Augusto Pinochet, the left's favourite example of an American puppet. But Pinochet never idealized the Chilean state, or promoted a cult of himself as a leader, or prepared for war or waged war against any foreign country, as required by Raimondo's fascist model. Pinochet even organized a democratic referendum that removed him from power. Indeed, Pinochet was no more than a typical, short-term military dictator of a type seen all over Latin America, bereft of charisma or serious ideology. His rise to power was the consequence of historical accidents, not of ideology or mass mobilization, and he left behind a thriving democracy.

Raimondo attempted to become a Republican leader in San Francisco but was quickly dumped after boring the small party group in that city with his pretensions and diatribes. He took over a new conservative tabloid in San Francisco and soon put it out of business by turning every front page into a showcase for headlines about himself. About these ventures, Raimondo writes,

"National Review was my bible as a teenager, and I actively campaigned for Barry Goldwater for President in 1964. From there I joined Young Americans for Freedom (YAF), and then founded my own youth group, 'Young Radicals for Capitalism.' We had a huge chapter at Wayne State University, and put out a single issue of a magazine, The New Radical, that was filled with denunciations of the New Left. From there I joined the Libertarian Party during the presidential campaign of Roger MacBride (1976) and subsequently ran for office (Congress, state legislature, etc.) several times in California under the LP banner. I left the LP in 1983."

Raimondo has always wanted to be considered an author and journalist, no less than a political figure. At about 13 or so, he seems to have imagined himself as a science fictioneer. But he never had the discipline or stamina to apply himself to any profession aside from that of absurdist publicity hound. He has failed as a journalist and political commentator, exactly as Hitler failed as a painter, as Mussolini failed as a socialist leader, and as the most notorious fascist of the left, Fidel Castro, failed as a lawyer.

Like his models, when Raimondo never engages intellectually with opponents, but relies on invective, insults, and innuendo. Notwithstanding his bizarre and vulnerable persona as a gay Buchananite, he glories in violating the privacy of others. He is obsessed with exposing neoconservatives as "Trotskyites," a largely spurious claim, since the most famous example among the original neoconservatives, Irving Kristol, was a Trotskyist for only a year, nearly seventy years ago, and only a handful of recent ex-leftists - almost entirely ex-Democrats - are leading neo-conservatives today.

The psychological term for Raimondo's posturing is "projection." He is obsessed with rooting out alleged political, ideological, and even religious chameleons, with the unconscious intent of advertising his own political transvestism. This pattern is evident in all his activities: he claims that America is becoming a dictatorship, the better to justify his own ambitions for power. He defends the establishment media against criticism by conservative weblog authors, although without the rise of the "blogs" he would be nothing. Until the launch of Buchanan's unreadable (and soon to be defunct) American Conservative, his only place of publication was the paleo-conservative Chronicles.

Posing as a war-hater, Raimondo defends murderous dictators like Milosevic, who unleashed the only wars in Europe over the past half century. He presents the Ba'athist party-states in Iraq and Syria as victims of the malicious West and openly wished that Japan had won the Second World War, while fiercely alleging his patriotic motivations. When it comes to America's present wars, he revels in a repellent defeatism. The heinous attacks on America on 9/11 become for him an explanation of American "fascism."

Taking a leaf from his comic-book canon of political wisdom, Raimondo describes fascism as a product of "the traumatic humbling of a power once considered mighty." He cites Germany defeated in the First World War, while ignoring that Italy, where fascism originated, was a victor in that war, as was the third Axis power, Japan. Perhaps this omission can be ascribed to

the fact that Raimondo idolizes Japan, which was at the height of its power when it attacked Pearl Harbor. As he wrote so eloquently, in an article titled. "Hiroshima Mon Amour: Why Americans Are Barbarians," posted to his site on August 8, 2001, "the idea that America is, in any sense, a civilized country is easily dispelled." By contrast, imperialist Japan, which slaughtered millions in East Asia, is his idea of paradise. He believes "the wrong side won the war in the Pacific." It is, by the way, extremely doubtful that Raimondo has ever set foot on Japanese soil.

The upshot of Raimondo's mishmash is his charge that September 11 was "an enormous defeat for the U.S.," and thus the source of Bush fascism. Many fascist movements have been expansionist and imperialist, but others were historically known for their promotion of disaffection and demoralization, such as those in France and England before the Second World War, and the isolationist legion in America at the same time, which Raimondo seeks to revive. The Rosetta Stone of his philosophy is Buchanan's idea of the betrayed "American republic" - betrayed by democracy that is - an ahistorical trope which echoes prior fascist movements.

Classic fascism has other characteristics that resonate in Raimondo's agendas. He is a fanatical rumormonger, asserting that U.S. war plans against Syria and Iran are nearly operational, while Bush administration policies toward these states have been notably circumspect. He was among the most active disseminators of the legend that an innocuous document, titled "A Clean Break," having to do with Israeli foreign policy, was actually a blueprint for the invasion of Iraq.

If, as Mary McCarthy said, every word written by the Stalinist Lillian Hellman was a lie, including "and" and "the," Raimondo is a prevaricator down to the placement of commas, periods, and semicolons. One of his favorite tricks is the mendacious use of hyperlinks, giving the impression that his statements are backed by other sources. These are usually his own articles, immodestly declared by him to be "classics," which in fact have little or nothing to do with his latest ravings, but lead to more lies through more links. This, too, is not original with Raimondo; it is the Chomsky method of meretricious citations.

Raimondo calls Abraham Lincoln "the closest to a dictator that any American president has ever come." A couple of days later, forgetting or ignoring that statement, he labels President Franklin Roosevelt the "predecessor" of today's "fascism," and declares that Harry Truman and Winston Churchill were also "fascist heroes." At the same time, he tenaciously defends Milosevic - a dictator who freed no slaves - and, equally insistently, denies the occurrence of the 1995 massacre of Bosnian Muslims at Srebrenica. He also defames the Albanians, and encourages others on his site to do the same, and then denies being an apologist for Serbian war crimes. He has called the Kosovars "the Shi'ites of Western Europe" - meaning, Muslim friends of America, who deserve to be slaughtered. He fervently hopes for a new war between Slavic Macedonians and Albanians, since nothing warms his heart so much as the thought of dead Albanians except, perhaps, the dead "Zionists" buried in the Twin Towers on 9/11.

Calumny is Raimondo's Socratic method. He refers to David Frum and Richard Perle, two intellectuals who have no governmental authority whatever, as "strutting martinets." When I myself attempted to clarify the status of Islam in Uzbekistan, an American ally, while criticizing obstacles to democracy there, he labeled me a defender of torture. He accused me of "rationalizing the same sort of regime in the U.S." as in Uzbekistan - based, according to him, on "torturing dissidents, shutting out all political opposition, and arresting thousands on account of their political and religious convictions."

In his latest ridiculous column, "The Specter of Fascism," dated March 9, the Raimondian style of revisionist history is in full display. In a single paragraph, he refers to the leftist New York tabloid PM, published in the late 1930s and 1940s, as "Communist Party-controlled," which will certainly come as a surprise to Arnold Beichman, a long-serving anti-Communist and former leading editor of the paper. PM was famous as a battleground where Stalinists and anti-Stalinists fought for influence, but was never under Communist control. For one thing, unlike the real Communist press, such as the Daily Worker, PM did not promote an "antiwar" alliance, during the Stalin-Hitler pact, with the Nazis, of the kind Raimondo wishes to revive today - which is why PM, a newspaper that went out of business in 1948, still provokes Raimondista rage. Raimondo refers to PM's identification of pre-1941 isolationists as a "fifth column," which Dennis shrieks was "scurrilous and untrue." He's wrong. Calling the pro-Axis rabble in America then a "fifth column" was accurate reporting, just as it is accurate reporting to describe Dennis Raimondo as a sympathizer of America's enemies now.

Sometimes Raimondo posts other leftwing fascists to do his slandering for him. He has done this with Kevin Keating, infamous for hoisting a banner during the anti-Iraq demonstrations in San Francisco that read: "We Support Our Troops When They Shoot Their Officers." If a critic of Saudi Arabia's support for Wahhabism enters his sights, he will accuse them of fomenting war against the Kingdom. He has, in fact, insisted that the neo-conservatives in the government are actually preparing military action against the Saudis. Raimondo's protective attitudes towards the Saudis derive perhaps from the fact he and the Saudi princes share a commitment to the fable of "Zionist" involvement in 9/11.

For Raimondo, the Great Satan is America, and the Little Satan is Israel. He has written a screed called The Terror Enigma, that is a kind of Protocols of the Elders of Zion for the War on Terror. Raimondo's tract - it's only a pamphlet issued by a vanity press - insinuates, with no serious evidence, that the Israeli government had prior knowledge of 9/11 but failed to warn our authorities; that because an Israeli lived in the same neighborhood as a 9/11 conspirator they were naturally complicit; Israelis selling art on the streets of the U.S. were actually big-time spies engaged in undermining our government; that here, there, and everywhere, the omnipotent Israelis control everything, so why not the attack on the Twin Towers as well? The next step from this conspiracy logic is, of course, the claim that Israel was in on 9/11 with the Bush administration.

On October 29, 2004 Raimondo wrote a piece under the headline, "Bush and Kerry put Israel first." It claimed that, "the Jewish state keeps an entire people captive in the twin concentration camps of Gaza and the West Bank;" and "the Israelis love to torture and berate [Yasir Arafat] far too much to let him die a natural death." Referring to the Protocols of the Elders of Zion, he wrote, "one needn't refer to fiction when the relevant facts are so readily available." (In other words, the Protocols may be fake, but they tell the truth.) According to Raimondo, "Today, the word 'fascist' is the political equivalent of the 'f'-word, rendered virtually meaningless on account of its degeneration into pure epithet. Yet, Israel in its present trajectory fits the classic definition of fascism." And: "Israel, far from being our faithful ally, is potentially an enemy."

Almost as intense as his hatred for the Jewish state is Raimondo's loathing of democracy. Some may have been taken aback by the volume of his bile when he denounced the "orange revolution" in Ukraine as well as the current democratizing efforts in Lebanon. But not those who have followed Raimondo's prominent association with the Russian Jew-baiting website, Pravda.ru, and its American contributor, the neo-Nazi Bill White.

Bill White has followed the predictable career of neo-Nazi agitators. He is a Jew-hater and a compulsive liar, frequently inventing "facts" about those he targets. Posing as a "libertarian socialist" with a site at www.overthrow.com, he recently distinguished himself by hailing the murder of the family of the judge in Chicago who had the temerity to order payment of a fine by a neo-Nazi leader. The Roanoke Times reported on March 3, "As authorities investigate the killings of a federal judge's family in Chicago, a Roanoke white supremacist on Wednesday applauded the murders as justified violence against Jews and the federal government. 'I don't feel bad that Judge [Joan Humphrey] Lefkow's family was murdered,' William A. White, editor of The Libertarian Socialist News, wrote in an essay Tuesday on his Web site, Overthrow.com. 'In fact, when I heard the story I laughed. 'Good for them!' was my first thought.'"

While sorting out the love affair between antiwar.com and overthrow.com is akin to diving into a sewer, Dennis Raimondo and Bill White were eager contributors to the Pravda.ru site until the "patriotic" admirers of both bridled at their association with a journalistic enterprise associated, in the mind of most Americans, with old-fashioned Communist propaganda. Articles by both Raimondo and White have been widely recirculated by the Saudi-funded Council on American-Islamic Relations (CAIR). In the "red-brown" logic, Jew-baiting works equally well for fascists, Communists, and Islamo-fascists.

Raimondo's website consistently published propaganda generated by Randall (Ismail) Royer, a former CAIR employee now doing a 20-year federal sentence for terrorist activities. Recently, one of Royer's associates, Ahmad Omar Abu Ali, was charged with plotting to assassinate President Bush in collaboration with al-Qaida. Before his arrest, Royer distinguished himself between with a campaign to harass and intimidate critics of the jihadists - myself, and the Saudi dissident Ali al-Ahmed among them - in the Washington region. Raimondo gleefully recycled Royer's Jew-baiting rants on his

website. CAIR, which employed Royer, joined in the campaign by redistributing the Raimondo screeds. CAIR - which pretends to be an anti-defamation organization - also disseminates the neo-Nazi propaganda of Bill White.

CAIR poses as a civil liberties advocate, Raimondo poses as "antiwar," White poses as a "libertarian socialist," and their comrade-in-arms Kevin Keating poses as a "revolutionary." The technique is familiar to any history student: the Nazi party called itself the socialist party of the German workers, while plotting to suppress the labor movement and enslave wage-earners.

The law recognizes that some conspiracies are real: one such is the common effort of Raimondo, CAIR, Royer, Abu Ali, White, Keating, and others to silence the critics of Islamist extremism and intimidate the supporters of America's leadership in the global war on terror. Of that leadership, Raimondo has written, "Go F*ck Yourself, Mr. President." (November 26, 2003).

Raimondo has taken on the role of a pre-1941 Axis agent in America, lashing the Jews, giving comfort to the country's worst enemies, defaming the president, and, in general, seeking to undermine faith in democracy. He also craves martyrdom, and dreams that he will be arrested and tried for sedition the way some of his heroes were. He is so reckless in his provocations that he may some day get his wish.

On his Antiwar.com website, Raimondo wrote in August 2005: "The invasion of Iraq was itself a great diversion, in that it had nothing to do with the alleged attempt to crush al-Qaeda. Instead, it had everything to do with the preconceived agenda leading neocons took with them to Washington when they were brought in by the Bush administration to run American foreign policy. They hijacked that policy to engage in an ideology-driven adventure, one that - having achieved, like so many government programs, the exact opposite of its stated intention - is ending in bloodstained tragedy."

Indeed, this radio is for the program listener who wants to give his/her ears a rest from the ol' headphones. Panasonic, Philips/Magnavox and Grundig made quite a number of nice sounding receivers during the 1980's. The D2999 was one of the best in this regard. As I recall, it was described by some reviewer or another as the poor man's Satellit 650 (the Satellit 650 retailed around $1000 in its day).

I have an Allied Radio Corporation Spring Summer 1941 catalog here.(1941,the year I was born) 180 page catalog,including the front and back cover pages.Lots of nice looking old Radios in my catalog.Cameras,cell phones? Nothing like that is listed in my Allied Radio Corporation catalog,but that was sixty four years ago.Spring Summer 1941,A Day Which Will Live In Infamy haden't gotten started yet in U.S.A.I was one month and two days old on that day.

My radios directly drive passive bookshelf speakers from Radio shack or
circuit city as examples. Simple as can be as most radios have a speaker
jack and they sound great.

These days I am using Sony speakers, which have a 4.5 inch speaker and a
tweeter in them. They were about $20 each.

(You are a tool)

During the second week of the Iraq invasion, the Israeli newspaper
Haï¿½aretz interviewed several intellectual supporters of the war. The
New York Timesï¿½ Thomas Friedman (who backed the war despite being
haunted by its similarities to Israeliï¿½s 1982 invasion of Lebanon,
which he saw firsthand) suggested that this was very much an
intellectualsï¿½ war. ï¿½Itï¿½s the war the neoconservatives marketed. Those
people had an idea to sell when September 11 came, and they sold it.
Oh boy, did they sell it. So this is not a war that the masses
demanded. This is a war of an elite. ï¿½ I could give you the names of
25 people (all of whom are at this moment within a five block radius
of this office) who, if you had exiled them to a desert island a year
and a half ago, the Iraq war would not have happened.ï¿½ Then Friedman
paused, clarifying, ï¿½Itï¿½s not some fantasy the neoconservatives
invented. Itï¿½s not that 25 people hijacked America. You donï¿½t take
such a great nation into such a great adventure with Bill Kristol and
the Weekly Standard and another five or six influential columnists. In
the final analysis what fomented the war is Americaï¿½s over-reaction to
September 11. ... It is not only the neoconservatives that led us to
the outskirts of Baghdad. What led us to the outskirts of Baghdad is a
very American combination of anxiety and hubris.ï¿½

That kind of ambiguous conclusion about the Standardï¿½s and the
neoconsï¿½ role in starting the war is what the undisputed and public

evidence will sustain. The Standard was important. It amplified the views of ï¿½the 25ï¿½ the way luncheon seminars at the American Enterprise Institute and other neocon think tanks never could have.

Its role can be likened to the Yellow Press, the Hearst papers and Pulitzerï¿½s New York World, which did everything they could to instigate a war against Spain over Cuba in the 1890s and boosted their circulation mightily in the process. In the wake of 9/11, the Standard didnï¿½t have to create the martial atmosphere artificially, just divert it from Osama to Saddam.

Without the Weekly Standard, would the invasion of Iraq taken place? Itï¿½s impossible to know. Without the Standard, other voicesï¿½including those of the realist foreign-policy establishment, which had been dominant in the first Bush administration and which opposed a precipitous campaign against Saddamï¿½would have been on a more level playing field with the neocons. That would have made a difference.

So in a sense the Iraq War is Bill Kristolï¿½s War as much as it is George W. Bushï¿½s and Dick Cheneyï¿½s, and the Standard is the vehicle that made it possible. It should go down in history as Rupert Murdochï¿½s War as well, and thus becomes by far the most significant historical event ever to be shaped by the Murdoch media.

How ironic it would be if it were not, in the end, a war Rupert Murdoch particularly wanted.

Ahem. Fry's is only in CA, AZ, OR, and a couple other stores. Even in
CA, if you're outside of LA, Silicon Valley, or Sacramento (one store),
it's a LONG way to a Fry's. I believe that there's only a handful of
Fry's outside CA. I'm lucky to have a Fry's nearby. But most people
don't have that luxury. In a lot of places, if Rat Shack closes down,
there will be NO sources for electronic parts. Most mail order places
require a minimum order, since to ship one resistor is too much trouble.

Reading the biography of this Raimondo guy that you posted, it is certainly possible. They seem to share similar qualities: they both claim to be "Goldwater conservatives" while pushing far left dogma, for example. Raimondo is nuts. But not any more nuts than the neocons.

This is America's choice: between the quasi-fascism of Bush and Co. or the quasi-communism of the far left. Both seek to oppress the working people in favor of the elite, both hold up the mantle of representing the working class while showering favors on an elite few. America has forgotten how to be a democracy, and soon it will no longer be a democracy.

Half the country supports the left-communists, half supports the right-fascists. Everybody wants to banish free speech and other freedoms in favor of "freedom for me but not for you". IOW, freedom if you agree with the self-proclaimed gods of the movement, oppression if you don't. Truly freedom loving people find themselves forced into one of the unfree boxes presented as their only options, or forced into the wilderness, stripped of a voice.

All Americans have displayed a preference for having their thoughts preformed by their respective elites. Maybe it's because schools don't teach independent thought anymore, or teach much of anything. Half of Americans are functionally illiterate, more than a third haven't graduated high school, and those that have aren't very educated. America is increasingly a massive ghetto of the uneducated and ignorant, vulnerable to being told how and what to think because they literally don't know any better. The result is that a great mass of childlike people has been given deadly weapons to play with.

Algor is just frustrated that his party isn't able to destroy America
and America isn't asking for an apology from Bin Laden for letting our
buildings get in the way of his hijacked planes. It is very true that
Al Gore is of an anti-America (not just anti-American) ilk. This doesn't
mean that all Democrats are anti-America (e.g. Scoop Jackson nor JFK
were anti-America.) However, Fat-Teddy Kennedy, nutty Al Gore and
their supporters are disgustingly anti America (not so much pro-Bin Laden.)

Part of the reason for nutcase Al Gore's breakdown is that he cannot believe
that the rest of the country isn't as crazy has Al Gore or his supporters.
Algor feels cheated -- but I suspect that the devil and Bin Laden each feel
cheated also when people reject each of them also.

Algor is obviously supporting Al Queda, and it is definitely not true that
those who are against Al Queda (and Al Gore) are nazis. Al Gore does probably
feel like he is disliked, but Al Gore and his supporters should feel that they
are indeed justifiably disliked by anti-Islamist Americans.

< Snip >

The final determination would be whether Raimondo listens to short wave
or XM radio. If Raimondo listens to XM you just might have a match.

Let's see what Doctor Zebra has to say regarding Sureshot Deadeye dick "here's Shotgun Pellets in your body,Harry" cheney.
www.doctorzebra.com
I dont take any meds at all,(knock on wood) but if I did or if I was taking any meds and the directions on the meds bottle(s) said dont operate any machinery,y'all wouldn't catch me operating any machinery.Shotguns,Rifles,Handguns (even Fishing Reels) can definetly be considered to be machines because they have moving metal parts.(The Machines of War) Loaded Firearms (I believe y'all will agree) are definetly very dangerous machines.In my opinion,cheney has no business handling any Firearms at all.

its a nice radio but over rated. the sound is no where near that of the
Satellit 600, and the performance is no where near the Sony 6800 orange. I
think that even the Panasonic RF-2900 sounds better on shortwave. and on FM
my upgraded satellit 800 sounds better.

I have one in my collection and I don't think it lives up to the legendary
status it has obtained.

it is a very impressive radio to look at though !

I got a Toshiba 20" TV for $109 on closeout at Fry's. Only better deal
was some cheapo POS at Wally World. I live a couple miles from the
Sacramento Fry's, so I like to go in there and look around. Fry's has
THE BEST selection of HDTVs, including LCD TVs. They also have a lot of
LCD monitors and some computers, although their computers are rather
pricey.

Well,at least I have better judgement to not drive my vehicle if I am drunk.That is why I do all of my drinking right here on Blueberry doggys couch and I never get behind the steering wheel unless I am stone cold sober,driving while intoxicated is just as dangerous as handling loaded Firearms whether sober or not sober.Speaking of that,I went to the American Automobile Insurance (Inshorance) Agents office at 1900 Higway 80 West (it's catty corner across from the Bel Air shopping center,just a short ways from the Coca Cola bottling plant on Highway 80 West) this afternoon and got liability inshorance on my raggity old 1978 Dodge van for $175.00 every six months because my other inshorance policy with Traverlers ran out today.I saved about $100.00 every six months.Travelers,Shove It! Allstate wanted $517.00 every six months.Allstate,Shove It!

I totally agree with the statement expressed below. It's a pretty accurate
picture of America society in these times.
It's the same old conservative versus liberal BS spun. And when you don't
agree with either, then you're called names from all sides.

>> Billions For Iraq Reconstruction Unaccounted For
>>
>> (CBS) NEW YORK
>>
>> Some $8.8 billion dispersed for reconstruction efforts in Iraq is
>> unaccounted for, says the U.S. official in charge of tracing it.
>>
>> For a report to be broadcast this Sunday, Feb. 12, at 7 p.m. ET/PT, 60
>> Minutes correspondent Steve Kroft investigates the billions spent on
>> reconstruction-related work, particularly money paid to a contractor,
>> Custer Battles, now being sued for fraud.
>>
>> Stuart Bowen, special inspector general for Iraq reconstruction, says
>> $8.8 billion is unaccounted for because oversight on the part of the
>> Coalition Provisional Authority, the entity governing Iraq after the
>> war, "was relatively nonexistent."
>>
>> The former No. 2 man at the Coalition's transportation ministry, Frank
>> Willis, concurs.
>>
>> "I would describe (the accounting system) as nonexistent."
>>
>> Without a financial infrastructure, checks and money transfers were not
>> possible, so the Coalition kept billions in cash to pay for its
>> multitude of projects.
>>
>> "Fresh, new, crisp, unspent, just-printed $100 bills. It was the Wild
>> West," says Willis.

>>
>> Such an atmosphere made it possible for billions to go missing and
>> companies to defraud the Coalition.
>>
>> Custer Battles, a company quickly formed after the war to get
>> reconstruction contracts, goes on trial next week, accused in a
>> whistleblower suit by an ex-employee of bilking the U.S. government out
>> of $50 million.
>>
>> "(Custer Battles) wanted to open fraudulent companies overseas and
>> inflate their invoices to the U.S. government," says the whistleblower,
>> Robert Isakson.
>>
>> He says he refused to go along with the scheme and "two weeks later,
>> apparently I heard they began exactly the fraud they described to me,"
>> he tells Kroft.
>>
>> Willis remembers Custer Battles, which was formed by former Army Ranger
>> Scott Custer and a failed congressional candidate, Mike Battles, who
>> claimed to be active in the Republican Party and have connections to
>> the White House.
>>
>> "They came in with a can-do attitude, whether they could or not," he

They don't enough sense to see how the handwriting is on the wall. Of course, when this overinflated housing bubble begins to deflate and people who have been in the refi boom, then you'll see the proverbial SHTF. Because you can't sustain housing prices at this level without incomes and paychecks improving. Not to mention millions of jobs being outsourced.

3 million manufacturing jobs lost

Outsourcing computer professionals jobs to Bangalore, etc.

GM, Ford, and all the auto suppliers hanging on by a thread while benefits are cut and more jobs leaving.

Gee, if these guys actually knew the facts of what exists outside their walls and houses, they might actually learn something. Saudi Arabia has a large underclass of people who are Islamic and poor. The riches of the country have been squandered over the years on building extravagant lifestyles for the monarchy. That's why you have the people there quite disillusioned with the situation.

Right, one shouldn't expect the audio quality of a Satellit 600/650
w/the D2999. The RF-2900 comment is interesting, though. I have to
say that I have a soft spot for the RF-2900 and 2600, myself, despite
the drift on these models.
In terms of size, layout, and technology/features, I guess the
Panasonic RF-B600 would be the radio which would be most reasonably
placed in the D2999's peer group. I've never owned an RF-B600. I've
wondered how it would stack up against the D2999, though...

BS,

Gee 'you' forgot to mention the Sand, Yes Saudi Arabia
has plenty of Sand. Sand all over the place that's why
they call it the Desert Kingdom. Most of Saudi Arabia
is Sand {Dirt} Poor : But under the Sand is Oil. Yes, in
Saudi Arabia their is a Rich Under Class who live off the
Oil which is Under the Sand.

BS - Did I mention that Saudi Arabia has plent of Sand . . .
I think now I will take off my Shoes and Empty-Out
all the Sand from our journey around Saudi Arabia.

BS - Thank You for Sharing this Wisdom about Saudi Arabia,
and their Poor Sand and Rich Oil with me - Because of 'you'
Now I Know - For I have Walked a Mile in 'your' Sandy Shoes.

bs - did i mention that saudi arabia had plent of sand ~ RHF

I noticed that Radio Havana's 6000 freq was subject to loud pops and abrupt changes in signal level tonight around 0400. 9820 was not affected, but was too weak to listen to. The loud popping followed by rapid oscillation in signal level made Cuba impossible to listen to. Did anybody else notice this? Could this have been thunderstorms in the northeast?

Greg,

Let me repeat myself - The Federal Government Agencies :
The US Secret Service and FBI along with the Department of
Justice has Primary Jurisdiction for any an all Investigations
related to the President and Vice President.

NOTE - It has been that way ever since the Secret Service
was assigned responsibility for the Protection of the
President under law by Congress and since the FBI was
created by Congress.

Greg - Yes 'other' "Agencies" may, because of Jurisdictional
Responsibilities participate in and contribute to the Investigation
- But - It is the Secret Service and FBI that Direct and Lead
the Investigation. * * * * It Is Simply A Matter Of Law * * * *

Greg,

Yes - What Vice President Cheney did was both
"Dumb-and-Stupid" in simply not getting the Story
Out in a "Joint Press Release" with the Accident Victim
and the Ranch Owner immediately after the Victim was
Safely in the Hospital.

HeadLines VP Cheney Says :
"There Has Been A Hunting Accident . . . "

NOTE - That within the Week : Everything has been
Corrected Now {The Truth Is Out There} and the
Accident Victim is out of the Hospital and Home Resting.
- - - Let Us All Pray For His Full Recovery - Amen

Greg - With Respect to then President Clinton :
1 - Clinton Stone Walled "The Press"
2 - Next Clinton Lied on TV to the American People
3 - Then Clinton Lied Under Oath to the Federal
Investigators.
The Whole Process Took Many Months {A Year ?}

Cheney Is No Clinton and Clinton Is No Cheney [.]

Greg - I Am Glad We Had This Conversation :o)

Whittington Leaves Hospital, Says He Was `Lucky' in Accident
http://www.bloomberg.com/apps/news?pid=10000082&sid=alv29t4MmKnk&refer=canada
Harry Whittington said, 'deeply sorry for all that
Vice President Cheney and his family have had
to go through'' in the aftermath of the Feb. 11
shooting during a quail hunt.'

Cheney Shooting Victim: 'It Was an Accident'
http://abclocal.go.com/kgo/story?section=nation_world&id=3917089
"Accidents do and will happen, and that's what happened,"
Whittington told reporters during a brief news conference today.

Man shot by Cheney: 'Accidents do and will happen'
http://www.cnn.com/2006/POLITICS/02/17/cheney/index.html
http://i.a.cnn.net/cnn/2006/POLITICS/02/17/cheney/story.whittington.speaks.jpg

Man shot by Cheney: 'Accidents do and will happen'
CORPUS CHRISTI, Texas (CNN) -- Harry Whittington said Friday he was
sorry for what Dick Cheney and his family has "had to go through" after
the vice president shot him in a weekend hunting accident.

The 78-year-old Bush-Cheney campaign donor [the never give up huh? ;-)
-ed] spoke briefly to reporters upon his release from a Corpus Christi
hospital, but he took no questions.

Cheney sprayed Whittington with birdshot on his face and upper torso in
Saturday's hunting accident. Whittington suffered a mild heart attack
Tuesday, doctors said, after a piece of birdshot in his body migrated
to a heart muscle.

"We all assume certain risks in whatever we do," Whittington said.
"Whatever activities we pursue and regardless of how experienced,
careful and dedicated we are, accidents do and will happen."

Whittington, wearing a suit and tie, appeared with several bruises on
his face and neck. His discharge from the hospital came earlier than
expected.

"My family and I are deeply sorry for all that Vice President Cheney
and his family have had to go through this week," Whittington said.

READ - Debunking Cheney-Gate Myths {Liberal Lies}
The Smoking Gun has a Copy of the Official Police Report
on the Dick Cheney Hunting Accident.
http://wizbangblog.com/archives/010288.php
- - - Here's what they're not telling you...
The reports shoots down two of their latest talking points
about the Cheney shooting.

Myth {Liberal Lie} # 1 - Cheney was drunk when he shot
his hunting mate - 78-year-old lawyer Harry Whittington.
http://wizbangblog.com/archives/010288.php

Myth {Liberal Lie} # 2 - Because Cheney was drunk, he
(or the Secret Service) prevented the local police from
entering the ranch until Sunday - a full day after the
Accident - to allow him time to sober up.

Well I have had this radio for about a week now, and I am quite impressed
with it. It works great for me here in the UK, I can hear stations that I
never could before, I can't fault it myself.
I obviously can't compare it to the newer top of the range receivers as I do
not have one. but against my Sony7600GR/ATS909 and DX394, the Icom blows
them away, no contest.
Just my observations mind
cheers
Rikk

3071. (OT) : Global Climate Change (Not Global Warming) is a Completely Natural Occurrence . . .

Newsgroup: rec.radio.shortwave

MnM,

Dispite the Kyoto Protocol's "Global Climate Change" is a concern
for All Humanity and All Living Beings and Things on this Planet.

WHY - Because in spite of the Causes for "Global Climate Change"
Mankind Must Adapt or Face Extinction or at least greatly reduced
Populations for hundreds or Thousands of Years or more.
- - - Consider the Dinosaurs - Now Start Planning for a Very Hot
and/or a Very Cold Future for All of Mankind around the World !

Global Climate Change (Not Global Warming) is a Completely
Natural Occurrence that occurs in Random-Cycles throughout
the Life of a Planet and the Life of a {Planets} Sun.

GLOBAL CLIMATE CHANGE IS VERY REAL [.]
{ Not Withstanding the Kyoto Protocol's }

However, Global Climate Change is not the same as the
Pseudo-Science Theme of "Global Warming" which tries
to put the 'cause' of Global Climate Change on the current
Activities of Mankind.

NOTE - Much of the Kyoto Protocol's is based on the
'pseudo-science' of "Global Warming" that is often a
Political Issue / Cause {Tool} Marketed by the One
World Liberal Elitist Socialist {The OWLES}

Then again Global Warming is simply "The Weird Science" of
the Environmental Wackos !
{ People With A Cause - Be-Cause ! }

In the Reality of Global Climate Change Mankind's Role of
"Global Warming" may only be the Speck-on-the-Gnats-Ass
(Less Than 1% of the Real Total Assignable Causes.)

Yup, there's been hotter and colder times than normal. But those natural changes also take longer times to occur.

Look at the earth now vs. just 100 or 200 years ago. If you don't think we've made a tremendous impact on the resources of the planet then you are blind. It took millions of years to create the thing we call oil, and only a matter of a 100+ years to wipeout half of it. Another 50 years and we'll finish off the rest.

It's less of a pseudo science everyday as more and more evidence points to it being a real phenomenon.

Hiya....

I'm not surprised that you like it. The R72 has gotten some bad press because it wasn't an advance on the R71A. People who say that it is a bad radio IMO are off base. It is not a better radio then the R71A, but it isn't a bad radio in general. You can do good work with it. For the most part, when a radio gets a reputation for being very good, like an R8, everybody jumps on the bandwagon and talks it up. Including, people who have never used it. It is the same for a radio that gets a bad reputation, like the R72. People who have never used it are quick to say how bad it is. Though, I have to say... When you compare it against the Sony 7600GR and say that the R72 is better, you aren't comparing apples to apples. The R72 is a tabletop that sold for $ 600.00 to 700.00 new. The Sony7600GR is a portable that sells new for $120.00 to $140.00. Compared to other tabletops in its price range the R72 is average. Compared to other portables, the Sony7600GR is superlative. I've used the ATS 909, I own the GrundingYB400, Sony7600GR, PL-500, KA-1102 and a host of other portables. I can tell you that the 7600G is the best portable available. The R72 although a good radio and undeserving of heavy criticism is not the best tabletop available.

The problem on this board is that DXass reigns supreme, intimidating everyone on any subject, from receivers to politics. His comebacks are 100% invective, with no substance... he uses DXing as a way to propagate his ugly attitudes towards others. What needs to rest is his use of his computer.

Hauser is occasionally wrong, too. We all are on occasion, but, unlike you, we learn and move one.

In this case, it appears that Hauser took the mistake perpetuated in WRTVH, which inserts a comma, to be the "correct" way to write the name of this station. Of course, it is not, but I would assume that Hauser would say, "OK, I did not know that" when advised that there is no comma there. Particularly strong is the simple logic that no radio station is going to be called "Radio Station" alone.

Of course, there once was an MW station in Santo Domingo called "Radio Radio" but that was intentional. And there is to somewhat odd "Radio Caracas Radio" at 750 AM as opposed to "Radio Caracas Televisi&#65533;n" which is a TV network. These oddities have explanations and names, as incongruous as they are. Your case has no explanation other than being a mistake.

www.accuweather.com 5 day forecast and there is a 15 day
forecast.Yesterday,it was nice warm,sunny weather here.Last night the
weather started turning cold.Now it is even colder,cloudy and rainy.But
hey,it's the weekend,go figure.No snow or sleet or ice here though,I am
thankfull for that.

3092. DaviD Rickets and The "Conservative" Party

Newsgroup: rec.radio.shortwave
Date: 2006-02-18 14:33:40 UTC
From: SeeingEyeDog <lookin@u.org>
Message-ID: <11vec4sh1t3f556@corp.supernews.com>
Source record: 63393

The "Socialist" Democratic Party

[Pay attention to the stealth & morphing techniques of the "new" Socialist Democratic Party supporters and their candidates and how they masquerade as "conservatives" - Just like DaviD Rickets masquerades. This is exactly how Adolf Hitler came to power - by the support of the Communists in their hopes that a popular revolution against Hitler would usher in Communism. THAT IS EXACTLY WHAT DAVID RICKETS IS SELLING IN HIS PROPAGANDA POSTS.]

�For me, this is a second betrayal,� said Iraq War veteran Paul Hackett on Monday, announcing his withdrawal from Ohio�s Democratic primary for the seat of Republican incumbent Senator Mike DeWine.
...
How and why this happened reveals much about the puppet masters and special interests who from behind the scenes control today�s Democratic Party.

Only months ago Hackett was seen as a rising Democratic star, a popular military veteran of seven months� duty in Iraq who polls said could win a special election in the open 2nd Congressional District of Ohio in Cincinnati.
...
�The original promise to me from Schumer [chair of the Democratic Senatorial Campaign Committee] was that I would have no financial concerns,� Hackett told Associated Press on Tuesday. �It went from that to Senator Schumer actually working against my ability to raise money.�

According to Hackett, �My donor base and host base ON BOTH COASTS [I thought this was an Ohio election?] was contacted by elected officials and asked to stop giving.�

Democratic bosses [Communist Cadres] had decided to place their Senate race bets on another horse, seven-term Congressman Sherrod Brown of the unlucky 13th District who represents heavily unionized northeast Ohio rustbelt area from Akron to the industrial outskirts of Cleveland. [Somebody please tell the unfortunate Union members that they are supporting Socialist/Communism.]

Brown is a member of the far-Left "PROGRESSIVE" Caucus in the House. He took the same side as Fidel Castro in working to undermine the pro-U.S. government in Colombia, and he was a leading opponent of the North American Free Trade Agreement (NAFTA) and Central American Free Trade Agreement (CAFTA) [The agreements allow these countries to compete against cheap Communist Chinese labor.] He advocates �National Health Care� (socialized medicine). He voted against America�s incursion in Iraq [a Communist State], and voted against reducing America�s dependence on foreign oil by drilling on a scant 20 acres in Alaska�s Arctic National Wildlife Refuge (ANWR).

Brown has chalked up a 95 percent voting record from the left-wing Americans
for Democratic Action (ADA).
...
Fellow "PROGRESSIVE" Caucus member Dennis Kucinich rushed to endorse Brown,
undercutting Hackett's support and helping to drive him out of the race.
...
The 2006 Democratic plan in Ohio, as elsewhere, is to mount a massive
negative smear campaign against Republicans while Democratic candidates run
STEALTH campaigns as "moderates" advocating a vague, undefined "better way."
...
THIS COMPLETE STORY ABOUT THE "NEW" DEMOCRATIC PARTY AND ITS
LEFT-WING-LIBERAL-"PROGRESSIVE"-SOCIALIST-COMMUNIST STEALTH SUPPORTERS like
DaviD Rickets here:

Yep, they've always a 'plan', a 'better way', but as stated neither is
articulated in any way.

I always LMFAO everytime John 'Fraud' Kerry said the he had 'a plan' during the
last campaign, or stating that he 'could do it better'. He never did say what
his plans were, nor in what way he could do things better.

Liberalism is a mental illness.

The New York Times company is ultimately commanded through preferred Class B "voting" stock - 91 percent of which is controlled by Sulzberger family members. Since 1997 the company's Board Chairman has been Arthur Ochs Sulzberger, Jr., who succeeded his father. In 1992 Sulzberger also succeeded his father as Publisher of The New York Times.

The New York Times Company is the media conglomerate that owns The New York Times. It also owns the Boston Globe, the International Herald Tribune (IHT) and 16 other newspapers, most of which are in the Southeastern United States and California.

It owns two New York City radio stations. It owns eight network affiliate television stations in various cities. It owns 50 percent of the cable satellite television DiscoveryTimes Channel.

The company is part owner of the Boston Red Sox baseball team and the New England Sports Network (NESN) through New England Sports Ventures LLC. It also owns a minority share of two companies in the paper-manufacturing business.

The company owns and operates more than 40 web sites associated with one or another of the above entities.

Friday, 17 February 2006

Ernest Partridge, Co-Editor
The Crisis Papers

December 13, 2005

Dr. Howard Dean, Chair
Democratic National Committee

Dear Dr. Dean,

Every week I get dozens of solicitations from the Democratic National Committee, from the Democratic Senate and Congressional Campaign Committees, or from various Democratic candidates and office-holders, each of them asking for contributions.

"You can help us achieve victory next November," I am told.

If by "victory" is meant a majority vote cast at the polls, then the Democrats achieved "victory" in 2000, 2002 and 2004.

And yet, the Republicans remain in control of the Congress and the White House.

Small wonder!

Republicans build the voting machines, Republicans write the secret software, Republicans count and compile the totals.

The Republican machines allow no auditing of the vote totals they report.

So Republicans have the ability to "win" elections, regardless of the will of the voters.

There is compelling evidence that they have done just that.

And so, if nothing is done to end the privatization of our elections and to introduce reliable verification, the Republicans will "win" again in November 2006 and then in 2008.

Today, eleven months before the mid-term election, the outcome is fore-ordained -- as certain as Soviet elections under Stalin, and Iraqi elections under Saddam.

For, as Stalin said, "Those who cast the votes decide nothing, those who count the votes decide everything."

In the United States today, the GOP counts most of the votes, and there are no means to verify up to 80% of those votes.

In view of this dreadful situation, when the Democrats ask me for a contribution I must reply:

"What's the point? It's already been settled! What remains is an empty charade."

The evidence of election fraud is overwhelming.

You, Dr. Dean, are doubtless as aware of that evidence as I am. In fact, along with millions of fellow citizens, I watched the video clip of you sitting at a table with Bev Harris, as she simulated with a computer, in just a few seconds, a "fix" of an election.

If I were to elaborate the evidence of fraud, space restraints would force me to halt after I had scarcely begun, and I would never get to other issues I wish to discuss in this letter.

Suffice it to say that several independent statistical analyses have put the probability of an honest 2004 election as one in several million.

The thirty-plus-point polling discrepancy in last month's Ohio election reform initiatives are off the probability scale -- in effect, impossible as random error.

Attempts to explain away the 2004 exit poll errors are risibly lame.

(For example, the theory that Republican voters were more reluctant to speak to exit pollsters is supported by no independent evidence, and fails to explain why this alleged phenomenon was confined to districts with paperless e-voting machines, and not found in paper-ballot districts).

Reports of machine failure and error during the 2004 election were overwhelmingly to the advantage of Bush/Cheney.

No one has come forth with a plausible explanation of how Bush gained an additional eleven million votes over his 2000 total.

The evidence of voting fraud and election theft is no secret -- it is out in the open for all to see who are willing to see.

In 2000, millions watched as Republican thugs, recruited by Tom DeLay from Washington congressional offices, stormed and shut down the voting recount in Miami.

The published text of the majority opinion in Bush v. Gore that handed the 2000 election over to George Bush is a self-refuting travesty.

Books, articles and reports by Steven Freeman, John Conyers' staff, Fitrakis and Wasserman, Mark Crispin Miller, and the Congressional Government Accountability Office, to name just a few, all testify convincingly to the vulnerability of the election process and the

illegitimacy of the election results.

Occasionally a virtual confession of guilt is blurted out by a careless GOP operative.

For example, as the votes in the 2004 Presidential election were still being counted, Republican Congressman Peter King was caught on camera saying "It's all over but the counting. And we'll take care of the counting." (You can see it here).

There is no cogent rebuttal to this evidence of voting fraud: there can't be, for the e-voting machines and compilers have been designed to forbid rebuttal.

The software is secret and there is no independent record of the votes.

Accordingly, so-called "verification" is nothing more than a re-run of the suspect tallies.

Lacking substantive evidence of the reliability of the voting and compiling machines and software, all that remains for the defenders of e-voting is a pathetic plea, "just trust us!"

That and ad hominem attacks on the skeptics: "get over it!," "sore losers," "conspiracy theorists."

The response of the mainstream media in the face of all this?

Total silence.

The response of the Democratic Party?

Total silence.

The response of the media and the Party to the GAO report validating the concerns of the critics?

More silence.

Why!?

Admittedly, with total GOP control of the executive and congressional branches in Washington, federal investigation and legislation are, for the moment, out of the question.

But elections are administered on the state and municipal levels where, in many cases, the Democrats are in control.

So I ask again:

Where are the criminal investigations?

Where are the civil lawsuits, e.g., by Max Cleland in Georgia, Walter Mondale in Minnesota, Al Gore in Florida, John Kerry in Ohio?

Why is appropriate state-level legislation not proposed and enacted by Democratic majorities?

Why is the national Democratic Party not publicizing the GAO report?

I am told that some Democratic politicians are concerned that if the Party raises a ruckus about voting fraud, the Democratic base will be discouraged and will stay at home on election day.

Well, so what?

If the fix is in on election day, what difference does it make whether or not the voters go to the polls?

Why bother to close the gate after the horse has been stolen?

We also hear that the crime of stealing a national election is so enormous that the GOP wouldn't dare to attempt it.

Why would they not?

Computer experts have shown us that the theft of a national election can be carried out by very few individuals:

the programmers who write the secret software and a few centralized hackers working in "real time" as the returns start to come in.

We are also told that they can do this without leaving any trace of their crimes.

Might the perpetrators be deterred by moral qualms or loyalty to our political institutions?

Get Real!

We are speaking here of a pack of scoundrels who have lied to the public in order to launch an illegal war costing tens of thousands of innocent lives,

who have openly violated treaties and condoned war crimes,

who have suspended the civil liberties guaranteed by the Bill of Rights,

who have absconded with the national treasury and have put our children and their children in permanent hock,

who have sullied the good name and reputation of the United States before the community of nations.

In the face of such manifest evil, stolen elections are moral chump change.

And consider in addition the stakes faced by these traitors:

billions of dollars from the public treasury "appropriated" into private accounts and massive tax breaks for Bush's "haves and

have-mores" while the rest of us face an increased tax burden and a slash in public services.

And for many now in the Bush administration and in the Congress, defeat in the 2006 and 2008 elections would bring Congressional and Justice Department investigations and indictments followed by hard time in the federal slammer.

In the face of all this, who can doubt that, if given the opportunity, they would fix elections in order to keep their ill-gotten booty and their immunity from prosecution?

And it is abundantly clear that they have this opportunity.

When the defenders of e-voting bother to respond to these concerns, they are heard to demand:

"where's the evidence of this alleged fraud?"

As noted above, we have the evidence, compelling at least, and many believe, conclusive.

But such demands radically misconceive the correct burden of proof.

Private citizens and organizations should not have to take upon themselves the obligation to prove their franchise either secure or fraudulent.

The free citizens of an authentic democracy have the right to a secure and verifiable vote, and it is the proper task of the criminal justice system to secure that right.

So there you have it, Dr. Dean.

A massive and ongoing crime is being committed against our democracy -- a democracy which has now, in effect, been set aside and shut down.

A democracy which can only be restored if we the people rise up and take it back.

Where, in this coming struggle, is the Democratic Party?

Is it an ally of the people and a defender of our Constitution?

Or is it an accomplice to the crime?

The American people are entitled to an answer.

Continuing silence by the Democratic party is, in effect, an answer.

But it is not the answer to which the free citizens of a democracy are entitled.

Respectfully,
Ernest Partridge, Ph.D,
Co-Editor, The Crisis Papers.

I 've found that most RS stores in the Baltimore metro
area are poorly staffed, with people who
have no knowledge of rven rudimentary electronics. Last trip to the
nearest one, I had to wait what seemed forever while the one
sales "associate" spoke with his girlfriend and when I called the
regional office I was told that the regional manager didn't "have the
time tospeak to any customers". Finally I called Texas direct and was
told that they have very littlecontrol of anything but a criminal
matter involving their regional managers. They need to close ALL their
strore and reorganise so that everyone is trained proerly and leave the
cell phones and such to those who really know their product and at
least have a person available at the regional office that can help with
a real quesyion . Oh - they send me a 5 dollar certificate in the mail
for a discount on any 149 dollar cell phone.DUH

i recently bought a mini 300 radio. i previously was using a mini 100 at work but it didnt last long. the 100 was fragile and not suited for any but the most delicate use. i would NEVER consider buying another 100 under any circumstances. the 300 seems to be of higher quality. first, the plastic is designed better. the case is very nice, with great fit and finish. the surface is dense and shiny, almost like it was polished. there are no mold marks or swirls or flashing marks anywhere! the display is large and simple. all buttons and switches are captured by the case so that nothing can pop off and be lost. the painted lettering seems to be epoxy or similar paint. it is thick to the extent that the lettering is slightly raised by the thickness of the paint. all lettering including the miniscule band and frequency information is crisp and hard and very well printed. the case feels good with rounded corners and smooth seams. it feels sturdy with no flexing or the tick and pop of cheap thin plastic. now on to its performance... the buttons are stiff and at first dont seem to work but this is not as it seems. all buttons require a firm solid push to respond and so are not easily actuated while holding and fiddling or jangling in your pocket. the exceptions to this are the volume and tuning dials. tuning is very fast and delicate. fine tuning takes small slow movements of the thumb wheel that approach the limits of my ability. (but then consider that i am an old and arthritic construction worker with carpal tunnel syndrome and numbness of the extremities!) the entire band is covered by three strokes of the wheel. tuning is VERY fast! sensitivity is very good all things considered. it seems like this radio hears off its whip as well as my sangean ats 505 and ats 606 radios, and MUCH better than my ats818 is off its own whip. selectivity is another matter. this filter is as wide as the big blue sky! the slot is about three tuning steps wide on sw! holy crap!! well, its not as bad as it sounds. the wide filters are a bonus because of the drift! holy crap! (did i already say that?) this thing drifts like a sailboat! a channel is like a message in a bottle! at first i was put off by the wide selectivity and the gruesome drift but after using this radio for a while it really is not too bad. the wide selectivity compensates for the frequency drift to an extent and allows for the best audio response possible. all things considered i think its a good compromise. the drift settles down in a while and the digital display makes it easy to touch up the tuning. after all it is a cheap analog radio. the sound is fair for a two inch speaker, and its loud! so loud in fact that its easy to distort and overload the audio. the headphone jack is loud too. it really needs attenuation. on the other hand the high power output available at the headphone jack allows the use of an outboard stereo speaker. a mono plug does not work at the phone jack, stereo only. am reception is good for a miniature radio, better than many. one odd thing is that the fm/sw whip seems to be

active on am also! under certain conditions, like in the car for instance when am reception is difficult just extend the whip and am improves noticeably and seems omnidirectional! very odd. fm is pretty bad. it needs a local/dx switch or attenuation. fm front end overloads badly in town. out in the country it is much better. battery life is great! the cheap Chinese generic batteries included are still going strong after three weeks. all in all i am very happy with this radio despite its shortcomings. its a very fun radio to play with. it has easy bandscanning and all that charm that analog sw radios have, yet looks and tunes like a cheap 60's am 6 transistor radio. it comes in several outrageous colors (i bought yellow) or the traditional basic black for the more conservative among us. the price was kind of salty by my standards ($40) and ordinarily i NEVER pay full price for a sw, but still i am satisfied with this purchase. this radio is handy to carry, is good looking and fun to use. seems like a good buy. if it hold up on the job remains to be seen.

I wish there was a Fry's and a Staples store here in Jackson.There are three Office Depot stores and one Best Buy store and one Circuit City store and one CompUSA store and one Office Max store in Jackson (and about five million other kinds of stores,gas statins,eat joints,etc) that I know of,that I have been to before.There might be more by now,considering how fast the suburb cities that surround the Jackson area are growing.I haven't been to any of those suburb cities around here in a million years,that includes down town Jackson too.Mostly the only places I go to anymore is the Goodwill thrift store which is right on my way to the Wal Mart store food department at the intersection of Greenway Drive (the Wal Mart store is on Greenway Drive,there are about seven more Wal Mart Supercenter stores and one Wal Mart Sams store around here too) and Highway 18 and once in a while I go visit my old buddy and his wife in Richland,Mississippi.Yep,there is a Wal Mart store across Highway 49 from their house too.I dont hardly go nowhar no more and I dont wants to go nowhar nomore neither.I am glued to doggys couch and my tv sets and my radios.

What is the difference between tv sets that are tv sets and those monitors that look like tv sets that are parked right next to them tv sets in the stores? Reason I ask is because I am thinkng about buying a new Philips HDTV 30 monitor ($549.00,was $638.00 at the Wal Mart store) with Active Control (whatever that is?) flat screen monitor.I assume the 30 means 30 inches diagonal measure of the flat screen and I assume I can connect the cable from my DirectTV set top box (or cable tv,if I ever go back to cable tv) and watch my favorite old,old,old tv movies on the monitor and I assume if I connect a DVD player/recorder set top box to the monitor,that will work ok too.I assume the HDTV means the monitor is an HDTV ready monitor.The more I read about that stuff www.tvpredictions.com the more confused I get.No wonder so many people look at those HDTV sets in the stores and they walk away empty handed and more confuesed than ever.By the way,when I buy a new tv set or monitor,it will Definetly be a CRT tv set or monitor.

I very rarely ever have a reason to go to any of the Radio Shack stores around here.Not often is it that I need to go to Metrocenter Mall across Highway 80 from me. www.metromalljackson.com Unless I want to buy something from the Sears store.There is a Radio Shack store about two stores from the Sears store and I will look in that Radio Shack store to see if there in anything new that might interest me.

They have a brand called "Great Quality" or something that is really
cheap. I'm talking about their HPs and brand name computers. I prefer
not to buy name brand computers anyway. I'd rather go to a local shop
and get a custom built clone for a great price.

You get David Kaye to say that these non-existant weapons were
secretly moved with non-existant airplanes and I might pay attention.

This is all just anarchy anyway. BushCo is plundering the treasury.
Everything else is backstory.

From: cuhulin@webtv.net
Message-ID: <981-43F75D0F-1747@storefull-3254.bay.webtv.net>
Source record: 63621

That is why I bought a new Velocity Micro ProMagix tower computer (it has a biggggg window on it,I can see everything in there) ($1,290.00) from www.velocitymicro.com about three years ago.I dont care that much for brand name computers that have propietary systems and cheap OEM parts.Sort of like that time in Atlanta,Georgia in 1971 and a guy had a 1968 Jaguar car for sale,he had replaced the Jaguar engine with an inline six cylinder Chevrolet car engine.I wound up trading my 1968 Ford Mustang car plus $340.00 to a guy in Lawrenceville,Georgia for a 1957 Ford Thunderbird car.The exahaust system on that Thunderbird car was shot,I had to drive with the windows rolled down and about every 100 miles,put a quart of oil in that Thundebird car.The front end needed lined up too.There was a half circle dent in the left rear tail fin as though a pipe had fell and dented the tail fin.

Hi
Then simply do not rise to his bait, ignore him if you are getting upset
I never bother to argue with anybody on the newsgroups, it's simply not
worth the effort.
I just get on with learning about shortwave (of which I know very little)
the best I can from the very informative people on here.

Patriot DaviD Rickets' "Record"

"In the past days we have witnessed the elaborate war machines of the
imperialist powers, prepared over a period of years, swinging relentlessly
into action, thrusting with inexorable power the shuddering and reluctant
European masses into the line-up for the world conflict. Blindfolded by
secret diplomacy, deeply distrustful of the propaganda showered upon them,
the peoples of Europe have shown no enthusiasm for this war, no sympathy
with its declared aims."

Allied has not been owned by Tandy for decades. If it had, they would
not have set up their Tech America (then Radio Shack Plus) industrial
distributor experiment, (8-10 years ago), that they have since shut down.

Allied was part of Avnet, last I knew, but who owns what industrial
distributor at any one time is best described as a game of musical
chairs.

There goes that damnable reading comprehension problem of yours yet again.

The main point is *not* about "the rest of us" or "JFK". You've dodged
and danced and avoided the point yet again.

The main point *is* for you to explain why all the items I outlined
above are what you consider to be a "great job" by beloved leader.

Although, I'm sure you won't address the actual issue... and it looks
like David Eduardo hit the nail on the head when he said:

> The problem on this board is that DXass [thinks he] reigns supreme, intimidating
> everyone on any subject, from receivers to politics. His comebacks are 100%
> invective, with no substance...

...how true.

Might as well just keep on dodgin' and dancin', boggle boy of no
substance. You certainly don't seem able to defend your position of
Bunnypant's "great job".

Lots of writers work outside of conventional rules of composition:
e.e.cummings, Kerouak, Joyce, for example. Curiously, hack writers who
churn out mountains of pointless drivel seem to always follow "the
rules." Don't let grammar get in the way wnen you have something to
say. There is a class of pecksmith critics who love to pick at writing
errors while missing the whole point of the communication. That's why
good writing teachers at elementary school encourage writing efforts
that probably contain lots of errors.

I'm receiving 15580 khz at 1905 UTC. I checked primetimeshortwave.com
and hfradio.org, and they both list this as a Voice of America
frequency during that time. But what I'm hearing sounds more like a
hip-hop radio station that one might find on FM. A guy is interviewing
a singer and playing her songs. I'd say the SIO code is 544, and I'm
based in northern California. I'll keep listening for a station id.
Anyone know what this broadcast is?

Well, I should have believed them I guess. I never heard any kind of
id during the music program, 1905-2000 UTC. But after it was over,
there was a VOA id: "Africa service of the Voice of America," along
with the fact that Nightline Africa was on next.

That music program was the most interesting thing I've heard from VOA
so far.

It's a matter of common courtesy to use some visual anchors when you
cannot control the final appearance of the work. The font and spacing
on web pages, various newsreaders, etc. is not rigidly fixed, versus
a roll of UPI paper in a Hermes typewriter.

< Snip >

The goal of posting is to provide news. The goal is not to argue with
people. Post news and then clarify it if someone replies. This is a
"news group."

Think of yourself as a newspaper writer. This can include opinion, which
people can argue with but facts are facts so if you post factual
information you will steer clear of arguments.

Posting questions is good idea also as many people reading the news
group want to help others further their interest in short wave.

High Marks isn't written in stone,far from it,in fact.I own a Panasonic RF-600 AM/FM/Shortwave radio www.google.com DXing.com Panasonic Radios I bought it brand new about 25 years ago at a Service Merchandise store.Straight out of the box,that radio drifts like crazy,tune it to a station and you can see that tuning knob move counter clockwise about one eighth of an inch or more all by itself every single time,I used to stick a thin piece of cardboard like a calling card between the metal ring on the tuning knob and the plastic cabinet to help hold the radio on station.And not long after I bought the radio,the earphone jack worked loose all by itself,I never have used that earphone jack before.The only way I can get the radio to turn on,light up and work is to stick a little thin piece of plastic wedge between the metal outer body of the earphone jack and the plastic cabinet.I do not give High Marks to that radio at all.Frankly,Panasonic radios never have impressed me as far as quality is concerned,especially build quality.Of course it could be my Panasonic RF-600 radio I bought turned out to be a Lemon.Humph! GPX Radios are better than Panasonic radios,in my opinion. cuhulin

Just sticking with a program you can usually figure it out. Most
stations will ID on the hour. Other convenient times are when a program
segment ends in 10, 15, 20 and 30 minutes.

Another way to identify a station is most have for lack of a better word
"bumper music," regular announcements, bird calls and the like that you
can use to identify them when they are in another language you don't
understand.

Quite correct. Paragraphing is an important part of writing. And so is inductive development, knowing that the gerund always takes the possessive case, and so forth. But the average poster to this site is not a professional writer. The best writing you can hope for here is from the guys who took 'bonehead Engish 101 for engineers" or at the Tech Skule. Actually, the post objected to is an an example of "stream of consciousness" technique which has many adherents in that it flows similar to the way people talk and think. Lincoln's Gettysburg Address (composed on the back of an envelope) is one of the best examples of written language designed for speech.

Yep, VOA mostly plays music nowadays, and soon that will be disappearing too. Music is far cheaper than producing actual programming. Also, the US doesn't have a domestic radio service from which the VOA can draw programming, like RCI does with CBC radio. US radio consists of music on FM, and conservative talk on AM. What news stations exist are local in scope. In short, since nobody is willing to give IBB any money, they are forced to resort to playing music.

Actually when you look at the path this nation is taking it looks strikingly similar to the Weimar republic at least in economic terms. That collapsed government brought about the rise of Hitler and his fascist dictatorship. That corporate fascism is what turned Germany into a military power until their defeat at the hands of the Allies. Those who forget this history are doomed to repeat it

Just like clockwork, the WWCR mixing product showed up at 2200 on 4915.

I emailed WWCR earlier this afternoon, alerting them to the problem. Guess we'll see how long it takes them to get it sorted out.

Here's a quote from your homepage, homeboy:

"The common goal of DXers was to receive letters or "QSL" cards verifying that
the reception did, in fact, occur."

http://www.davidgleason.com/

I guess whatever QSL's you may possess mean nothing as well.

Germany also used debt to finance its massive military expenditures.
Germany had so much debt, in fact, that I once read an estimate that if
Hitler hadn't been defeated at the hands of the US, the crushing weight
of Germany's debt would have ruined the economy by the late 40s and
probably would have led to conditions that would have created a
revolution. Today, the only thing that keeps the US solvent is the fact
that China keeps shoveling yuan down our bottomless pit. If the Chinese
ever stopped, the US economy would vanish. It would be 1932 except a
million times worse. And it would drag the rest of the world down with
it. At least the Republican and Chinese Communist Parties would probably
be overthrown, but the bad part is that both countries would end up like
Somalia or Afghanistan.

You can buy a Degen for $50 on ebay that has digital tuning and much
better build quality. The Grundig/Eton is made by Tecsun, and one of
their cheaper models. If you're paying US prices for a radio, you're
paying too much and/or are getting too little. Ebay is your friend.

Note the keyword "was." I was referring to events of 45 years ago or so.
Today, the meaning of a QSL or verification has changed, due to the
internet, the decline of the hobby and other factors. Today, a QSL has lost
most of its value in proving reception, in fact.

Chile con carne is a Texan cowboy thing... so you are using the wrong
evidence to start with. You conveniently snipped the point I made about
that.... chile ocn carne, burritos, etc. are not Mexican... they are
American. even the spelling of "chile" is wrong (it's "chili" in Spanish).

If you see no difference between them, that doesn't matter.

If you do see a difference between them, that doesn't matter.

Whether you see any difference between them is utterly insignificant.

3249. Anybody remember Radio For Peace International?

Whatever happened to Radio For Peace International? I seem to remember some story about them being locked out of their studios, but I don't remember the whole story. They were the best source of left wing looniness on shortwave, along with RHC. And they were created by the UN! Their slogan should have been: "RFPI: Proving Joe McCarthy Right With Every Transmission!" :) Now I have to log on and read David Rickets's posts. I wonder what RFPI would have said about, say, Iraq?

Here's the full story of how they got locked out, from a left wing magazine. If you can stand a little left wing pontificating (ie the idea that it's all W's fault) then it makes for interesting reading.

http://www.earthisland.org/project/newsPage2.cfm?newsID=539&pageID=177&subSiteID=44

Apparently somebody brought in a new president of the university who wasn't aligned with the vision of RFPI or former University for Peace leaders. Since RFPI was operating under a questionable agreement with the university, all it took was for somebody to stand up and say "hey, you're not legally entitled to be here" for the roof to cave in. Also notable is the fact that it only cost them $200k to build the station. Even in inflation adjusted dollars that's not very much.

3260. Anybody remember a clandestine station that ran on coconuts?

Newsgroup: rec.radio.shortwave

I seem to remember hearing about a rebellious island somewhere in the South Pacific (although I'm not sure where, or who they were rebelling against) that had an "official voice" that ran on coconuts. Every year they'd harvest the coconuts, eat some, then burn the rest to keep the tx going for a while. Then the coconuts would run out, and they'd have to shut down until next year. This was necessary because the govt they were rebelling against had a total blockade in effect. I think the station was called Radio Bougainville or something. Anybody know what I'm talking about?

It is certainly a fine radio, but its a scanner.
as far as the HF is concerned, i find the yb400pe and the sony7600gr much
better for sw and they are portables. only costing 100-140 bucks

I've posted a short recording of Radio Free Bougainville, from the time I heard them at a Grayland, WA DXpedition. The date was June 16, 1993, and the time was 1120 UTC. Listen for the two IDs in Pidgin:

Hi, David/Dennis. You, like your sockpuppets, Sdaniel, me, Seeing Eye Dog, and the rest of the Goober Nation are utterly insignificant to the people in power. We are just toilet paper to be shat on, wadded up, and flushed. Get used to it. Unless you want to start a revolution.

>> most of its value in proving reception, in fact.
>
> Your opinion of course.

No, not an opinion. More like a consensus.

The value of a QSL is related to the value of a reception report. In the past, a report could not be generated and send in a timely form without actually hearing a stations. Today, web pages with streaming, tunable remote web receivers, and easy and cheap telephone connections make a reception report easy to make without ever having to hear a radio station on (one of) its frequency (ies). In the 60's, the only doubt involved MW DX reports that could be faked by listening to the same station on SW. Today, nearly every report on every station could be suspect as there are more and easy ways to hear stations that do not involve the use of a radio and aerial.

For this reason, many DXers have ceased to report DX (in part, of course, due to cost, low response, etc., also). Many of us prefer recordings to QSLs

and find it more entertaining to listen to a CD of catches than to look at slips of cardboard called QSLs.

In the days when I was most active in reporting, I got above 2300 verifications from 87 countries, on MW. Today, I do not report at all.

Yes, I believe that was the reported power... a 100 watt transceiver cranked down to 80 watts to preserve the final in the tropical heat.

A Google *Groups* search on keywords "Radio Free Bougainville Power" brings up a message thread from 1995 with more information on the coconut oil subject. People were executed for gathering coconuts for this purpose!

I don't know about yours, but on mine if you tune to a frequency and
press freq lock it stays dead on that frequency. The tendency to sift
up or down by 100hz seems to settle down at least on mine after about
10 minutes.

The original retail price on those radios was ridiculous...something
like $600.00, which would have gotten you close to the price of a
Kenwood R5000!!. At a price of $200.00 or so they provide pretty good
performance for the money in my experience. The filters both wide and
narrow are much better quality than those found on many portatops.

I put some radios to the test for sound quality

the RF-2900 with one of my upgraded filters
the D2999
my satellit 800 with special upgraded filter as described on my web site

the surprising results are that the 800 sounded a LOT better than either of
the others !!

much smoother and fuller sounding and less noise !

3281. RF-B600

Newsgroup: rec.radio.shortwave
Date: 2006-02-19 01:54:34 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <BtKdna-A-cp8UmrenZ2dnUVZ_sSdnZ2d@comcast.com>
Source record: 63681

according to the magnificant Ranier Lichte in his marvelous book, more radio receivers chance or choice, says this about the B600:

"has below average performance on SW"
"in a hurry to market a competitive receiver"
"a proplerly handled 2010 is vastly superior"
"even the R-600 performed better"
he says the filter are POOR
uncanny amount of images (on shortwave)

so the 600 is at this point in time only for collectors, and that is why it sells for such high prices (usually over $300)

Well I hope you had 'real chile' ..... you know, the stuff made
with chunks of meat and no beans (as I recall from when I lived in
Michigan the 'chile' used kidney beans and was more akin to goulash).
If you have the stuff like you get at Wendy's you would have to be a
fake fake Hispanic.

Hmm, I've heard a few tales on where chile originated; Texas, New
Mexico, Mexico and the truly specific "someplace in the Southwest."
The only common thread is that it was made by cowboys (vaqueros) who
were trying to find a way to make their meat more palatable. I hope
you serve the beans as a separate entree.

3288. When the Going Gets Tough.....I Reach For My Sony SW7600G

Newsgroup: rec.radio.shortwave
Date: 2006-02-19 02:33:16 UTC
From: "ve3..." <ve3iut@hotmail.com>
Message-ID: <1140316396.236813.166690@g44g2000cwa.googlegroups.com>
Source record: 63688

I was reading a post from the Levant that stated that short wave signals were very strong in the Near East and that fading was not a problem. The main requirement of a sw radio in that area was selectivity: the ability to separate powerful stations that were close in frequency. I had assumed that the horrible fading I have to put up with up here on the edge of the Laurentian shield was typical of all places. So my remarks are aimed at those people in North America and elsewhere who are bothered by serious fading.
Boy, do I have fading. There is a long selective fade where the carrier disappears and a minute or two of Quack Quack is unreadable. There is a pulsating short fade that sometimes is associated with the long fade. There is also an Aurora gargle which defies description. I have way too many shortwave radios to choose from, each with their own strengths, but the only one that sorts out the fading problem is my 10-year-old Sony SW-7600G. It is remarkeable how its synchronous detector locks in to a station and clears up the modulation. When sync detector cannot hold on to a weak or fading signal, there is one last trick to get the signal: turn on the BFO. The Sony is so stable that you can zero-beat the weak sgnal and inject carrier from the radio itself and it will not drift. Since the Sony has a good filter, you do not get both sidebands fluttering and interfering. You can select either USB or LSB depending on the conditions and you will generate a steady carrier free of fading. I cannot use this method on any of my other radios because of their wide filters.
In addition, the Sony has clear audio, good sensitivity, and the new models have more memories.
With the low suspot cycle, I find myself reaching for the Sony more and more and I would recommend it as the number one choice for a first radio if you can handle the ~$150 cost.

Where they say:

After digesting the section 4 contents you'll get the undeniable feeling
that the RD500 is primarily an HF receiver (which is a direct result of
its original design as an HF receiver) which we'll get into later.

That turned up a lot of info on the Frenchman who was the first
Westerner to set foot on the island-and for whom the island was
named-but little on the revolution. The best I could find was this:

http://www.eco-action.org/ssp/bougainville.html

Very pro-Bougainville, but the best synopsis I could find. Apparently
they were rebelling against a Western-owned mine that destroyed their
environment. They are part of Papua New Guinea. The blockade lasted for
most of the 1990s. Today, the revolutionaries rule the center of the
island, where the mine was located, but the PNG govt rules the coast.
They used coconut oil for EVERYTHING, not just powering the transmitter.
This website doesn't mention the radio station, but I presume that
eventually the transmitter conked out-it was probably found in the stuff
that the miners abandoned when the Bougainvilleans kicked them out.

Off-topic: ever notice how the Gilligan's castaways supposedly remained
plump and groomed after years on the island? You'd think that they'd
look like Tom Hanks in Castaway-dirty, unkempt and rail thin. Yet
another unrealistic TV show from the 60s.

That's a pretty good assessment of the situation. If we weren't captive to RED chinese capital, then we would be a much more free and prosperous society. Not to mention the general indebtedness of the US population. Housing costs are at an all time high while wages and profits are stagnating. Record budget deficits, record trade deficits. Let's see these if these so called conservatives and liberals can defend this bullshit

The virtue of patience, that is...

It would appear, at least in my case, that the ease of finding out just exactly WHERE you are on the dial has reduced greatly the time spent at a given frequency. Before digital displays, I'd spend at least the time required to get call letters, country and frequency.

Now,the program has to be interesting or, at the very least, I have to be in the 'fire and brimstone' mood to put up with the US televangelist types with the Southern Drawl.

Anyone else find that while digital displays are very fine things to have,. they just MAY have induced an instant gratification syndrome?

Especially when the University for Peace stations guards armed with machine guns around the station and effectively barricades the staff inside, forcing them to subsist on canned food thrown over the barbed wire fencing. Doesn't sound very peaceful to me. So much for nonviolent conflict resolution. They cut off the water, forcing station staff to drink rainwater. Finally they took a machete to the power lines-after five months (duh!)-and the staff emerged. I guess starving them is peaceful (as long as it doesn't involve gunfire) but as anybody who has been starving knows, there's little that's peaceful about a starvation death. And the notion that UfP leaders were willing to kill the RFPI staffers to evict them makes their idea of "peace" a laughingstock. Typical lefties: peaceful until you rub them the wrong way, then the long knives come out.

I think a true clandestine targeting the US is needed. It needs to be totally secret (not broadcast on WRMI) and dedicated to the overthrow of the US govt, and indeed all govts. I tried to buy a transciever clandestinely several years ago, but everybody wanted to see my ham license. I didn't get anything then, and I sort of dropped out of pirate radio, but now I think that Bush's crimes are so severe, and coverage so limited, that a clandestine station is needed.

Original RD500's were only HF.
It's only in the later production runs (and model No change) that a
separate VHF/UHF board was fitted and this was on the bottom side of the
radio and completely independent of the HF section.
The "Fairhaven RD500-VX is one of the few radio's I have found that give
very good all-round reception from DC to Light (nearly).

All the very best, Ken, G4KIR.

3333. Orwell wrote Bush's script

Newsgroup: rec.radio.shortwave
Date: 2006-02-19 12:30:50 UTC
From: David <rickets@knac.com>
Message-ID: <t6pgv19i2o6ufd5i8c08olcom3v5nvvrha@4ax.com>
Source record: 63734

Orwell wrote Bush's script

Ryan Blethen / Seattle Times | February 18 2006

The resemblance grows between the Bush administration and the sinister, monolithic political party INGSOC, from George Orwell's novel "1984," with every twisted and evasive defense for the violation of American civil rights.

Bush and Co.'s battle against terrorism has turned into a power grab and a war on Americans. Fear and contorted language are the weapons of choice.

The administration's assertive actions after 9/11 might have made sense in the raw aftermath of nearly 3,000 dead. With time and distance comes perspective. Those new presidential controls awarded to help ensure the safety of Americans now look more like the political clubs wielded by INGSOC.

Orwell might have got the year wrong, but his nightmarish vision of a super-nation at perpetual war, dominated by a government only concerned about control and party preservation, could gain purchase in 2006.

I hear more of Newspeak, the restrictive language created by INGSOC, with every presidential explanation as to why the government feels compelled to spy on Americans. Orwell wrote that the idea of Newspeak was to restrict the language to the point that people would have to think in the limited language of the party.

In true INGSOC fashion, the administration has used Bushspeak to spin a story broken by The New York Times about a domestic-spying program run by the National Security Agency and approved by executive order soon after 9/11 into a necessary program needed to weed out the deeply integrated terrorists living next door.

The timing was curious when, last week, Bush revealed that a terrorist plot was thwarted in 2002. Bush talked about the plot the same day stories surfaced about the doubts a secret surveillance court judge had about the legality of domestic spying. Of course, an administration spokesperson danced around the question of whether the NSA program was involved in stopping the terrorist plot.

The use of powerful and well-placed words and images worked for INGSOC. Its slogan ï¿½ war is peace, freedom is slavery, ignorance is strength ï¿½ fits like a truncheon in the cradle of shattered bone with Bush's recent State of the Union address:

War is peace

"There is no peace in retreat."

Freedom is slavery

"The terrorist surveillance program has helped prevent terrorist attacks. It remains essential to the security of America."

Ignorance is strength

"... We have benefited from responsible criticism and counsel offered by members of Congress of both parties ... Yet, there is a difference between responsible criticism that aims for success, and defeatism that refuses to acknowledge anything but failure."

Political doublespeak is nothing new, but has become a real threat to democracy in the hands of this administration. Bush has taken communication strategy to new heights, said David Domke, associate professor of communications at the University of Washington.

"This administration has become preeminent in crafting messages for political gain," Domke said.

The Republicans have made no secret about what they will run on this year. A recent Pew poll showed that Americans believe the Democrats could lead the nation better on every issue except national security. Bush aide Karl Rove has given speeches about national security and the president skips across the nation talking about the importance of spying on Americans to keep us safe.

This strategy works only if the electorate is fearful that a hostile world is ready to overrun America. Bush's fear-mongering resembles a version of INGSOC's Two Minutes (of) Hate, in which party members watch a video of legions of the enemy army marching behind a bleating political enemy.

American democracy has buckled under the weight of Americans voting scared, a weak press diluted because of consolidation by mega-public companies, and no real political alternative.

It does not matter that the administration and, by extension, the Republican Party are only doing what is needed to hold on in November and again in the 2008 presidential election. Their actions are beginning to eclipse our civil rights, potentially reducing freedom to a dim flicker.

You don't need a digital display to see exactly where you are on the
dial. You just need a calibration chart of bandspread indication.

I have a D2999. It's generally a nice rx for broadcast listening, very nice sound, easy to operate, well built. But it can't compete with, say, the Sony 2010 for sensitivity and DX performance. You can hear SSB stations, but the BFO is not as good as a true SSB product detector. But, as I said, the D2999 is a very pleasant radio for broadcast listening. In fact, it would probably be my favorite portable if only it had a synchronous AM detector and a carying handle (I hate those stupid carrying straps!). I also wish the display lamp were a lot brighter.

This thread has some comments about Panasonic portables. Never owned an RFB-600, but I did have an RFB-65, which was a very nice radio, probably the best built portable I ever had. Performance was acceptable, but again, no synchronous detector.

WTF do you need clandestine anti-Bush stations for when you already
have ABC, CBS, NBC, CNN, MSNBC, PBS, NPR, etc, ad nauseum?

The problem with that logic is that world economic trade is far more
interdependent today than it was in the 1930's.
If the US economy sneezes the world will get the flu - especially Communist
China and all the social implications that it will incur.

> >> That collapsed
> >> government brought about the rise of Hitler and his fascist
dictatorship.

Thank Communists from Eastern Europe for his rise. Just like the
masquerading Left-wing-Liberal-"Progressive"-Socialist-Communists that now
have stealthy HighJacked the Democratic Party - Deja Vu in Germany.

> >> That corporate fascism is what turned Germany into a military power
until
> >> their defeat at the hands of the Allies.

"Corporate fascism" is a term used by the Communist Party Intl.

> > revolution.

That was precisely why Russian Communists facilitated Hitler's rise. They expected the masses to revolt and peacefully usher in the Communist Party. That is the same plan of the masquerading Left-wing-Liberal-"Progressive"-Socialist-Communists, to stealthy highjack the Democratic Party. And the masses are falling for it.

> > Today, the only thing that keeps the US solvent is the fact
> > that China keeps shoveling yuan down our bottomless pit.

The US does not buy Yuan. It sells Treasuries - the most secure paper security in the world.

> > If the Chinese ever stopped, the US economy would vanish.

Hogwash! The US holds the most significant portion (over 60%) of its reserves in gold than any other nation on earth.
China and the rest of the world would suffer significantly worse. But, it will never happen.

> > It would be 1932 except a million times worse.

I would rather be living in the US than any other place if that ever occurred. But it won't.

> > And it would drag the rest of the world down with it.

When you say "it" you are saying China. Because it would have to be China selling its most secure paper security - US Treasuries - to attempt to start a global economic collapse. Knowing Communist Chinese Party history, they would not think twice if it meant the last means of survival for that hideous murderous dictatorial regime. Nevertheless, the U.S. has many economic allies ready and willing to purchase Chinese sold securities on the open market.

> > At least the Republican and Chinese Communist Parties would probably
> > be overthrown,

The hopes of the Communist Party International is an overthrow or revolution of some type within the U.S. political system in order to usher in Socialism and ultimately Communism - Deja Vu: Hitler's rise in Germany 1930's.

> > but the bad part is that both countries would end up like
> > Somalia or Afghanistan.

Hardly. The little Tiger nations in SE Asia will be more than willing to step in and replace China as the factory of the world. It was only a decade ago when the SE Asian Tigers and Japan were THE economic power house of the world. That was until Communist China devalued the Yuan currency around 1995(?) which ultimately brought about the 1997 Asian currency crises and gave China the lead in sucking in investment dollars. Add in Impeached Clintoon's idiotic MFN trade status for Communist China and you have sealed the Asian Tigers and Japan's fate. All carefully studied and planned by Communist China. And it worked better than they expected because the Chinese Communists know that Capitalists will always follow the profits instead of morals and ethics. However, China's economic success may just as well be the unraveling of the Chinese Communist Party. You can not be a Communist and Capitalist at the same time - period.

If you don't know history correctly you look like a fool!

Sitting behind my kitchen door,in my den/junkroom is a big rounded top solid wood "radio".It is very thick and heavy and unpainted.It is about the thickness and height (or a little larger) of a one gallon jar and about one and a half times the width of a one gallon jar if the jar was laying down on it's side.It has solid wood "knobs" attatched to the "radio".I bought it at a Goodwill store about ten years ago.I never do have any problems with that "radio"

This is a digital transmission mode with a carrier modulated with two tones. One tone represents "0" and the other tone "1." You have to tell the decoder several things. First you need to tune it so it properly discriminates the two tones and give the decoder the right shift. Then you have to tell it which tone is the "0." Then you need to pick the data rate. You get all that correctly and if the data is not further encoded then you can read the text being sent but these days most of it is encrypted by the military so you will not be able to read it. If you use a computer sound card the software can do everything except maybe tuning the radio. Tune in a RTTY and several other modes and the software will figure the other parameters out and decode it if not encrypted.

You can read some ham transmissions, ship to shore and maybe the combination ham /military network that sends personal messages from the troops if it is still around with the Internet email. You can still get weather fax sent to mariners.

I used to listen to the news services over HF that used RTTY modes. It was another way to get world news before anyone else but that all went to satellite and under the ocean cable with the Internet years ago.

''Here in America we are descended in blood and in spirit from
revolutionists and rebels - men and women who dare to dissent from
accepted doctrine. As their heirs, may we never confuse honest dissent
with disloyal subversion''.
-Dwight D. Eisenhower

"God forbid we should ever be twenty years without such a rebellion.
The people cannot be all, and always, well informed. The part which is
wrong will be discontented, in proportion to the importance of the
facts they misconceive. If they remain quiet under such
misconceptions, it is lethargy, the forerunner of death to the public
liberty. ...

And what country can preserve its liberties, if it's rulers are not
warned from time to time, that this people preserve the spirit of
resistance? Let them take arms. The remedy is to set them right as
to the facts, pardon and pacify them. What signify a few lives lost
in a century or two? The tree of liberty must be refreshed from
time to time, with the blood of patriots and tyrants.
It is its natural manure."

If you're on record, that doesn't matter.

If you're not on record, that doesn't matter.

Whether or not you are on record is utterly insignificant.

You have to exercise responsibility for any right or liberty. What was advocated above is not responsible. There are a few things you can't say and I'm not listing them here as you already know what they are but don't listen to me and you just might get more attention than you bargained for. Going forward I'm not responding to any more of your posts on topic or not. That goes double for the other guy in the thread that you replied too.

Yep, many American industrialists financed Nazi Germany. It wasn't just the Bush family-Henry Ford did business with the Nazis even after it became illegal. He only stopped when threatened with prosecution for treason. IBM sold the Nazis computing equipment that helped them wipe out millions of people. And that's just the US-Swiss bankers eagerly financed Hitler's military adventures. World War 2 was in a very real sense everybody's fault. Just like the world's thirst for oil and disregard for the common people sitting on that oil was part of the reason for the war on terror.

If you and your family wish to accept blame for WWII then that's certainly OK,
but please don't try to bullshit anyone here by trying to say that it was
'everybody's fault', dipshit.

U.S.Army Air Force lost over 450 men Bombing two ball bearing factories in Germany.Volvo (the name Volvo means,I Roll) took up the slack supplying ball bearings to Germany.Switzerland was working both sides of the coin,building and repairing equipment for the Allies and the Axis.I have an old hard back book here,Into The Wild Blue Yonder or maybe the book is titled The Wild Blue Yonder,it's around here somewhere.The book is printed on World War Two era recycled paper,the book says so.Very interesting book,it is about who was dealing with who during World War Two.Maybe Powells Books might have a copy of the book if you are interested.I bought my book at the Salvation Army thrift store many years ago.

Cuhu,

In my little town of Farmington, we have a photographer known as the "Hillbilly Snapshooter". He's world famous and had stuff published numerous times in Life Magazine and other national publications. You remind me of him a bit.

You should gather up all your various ramblings that you posted here on the web and publish them. I'll bet you will make a fortune. It'll be Filet Mignon for old Blueberry and you...

Last Wednesday afternoon,I went to the Wal Mart store.(food department) Just as I was putting my bags of grub in the back of my van,a black (they are really a dark grey color) Helicopter flew low over the parking lot heading in a North/Northeast (mostly North) direction.Yesterday morning,a black (dark grey) Helicopter flew low over my house,I think it was heading in a West (mostly West) Northwest direction.But those Helicopters fly low over millions of people's houses every day.

Possible. I can see a depression era diner or homemaker using beans
to stetch the meat - makes sense, as well as a musical after-dinner
session. Don't know if you've ever visited a chili cook-off, you
show up with beans and thats's it.....you're outta the
competition. However, the meat need not be beef - elk and venison are
also acceptable.

Sunday, 2-19-06, from southeastern Wisconsin. Satellit 800 off the whip. My first posted radio log, so be gentle with any criticisms.

9760. 22:15 UTC. Ethnic music, male anncr. Man and woman then talking (drama show?). Good volume, some fading. Radio Cyprus?

9855. 22:18 UTC. Music. Man and woman having discussion, then music. S6 or so with some fade. Radio Kuwait?

9870. 22:22 UTC. Had to tune using LSB. Strong interference. Man and woman speaking, sounds Arabic. About S5. Probably Voice of the Kingdom of Saudi Arabia.

9885. 22:25 UTC. Sounds Spanish. Male anncr. Phrase "Afro-American" heard multiple times. Mention of Los Angeles. Good signal with slight interference. About S8 here.Not sure, but I think it was VOA, not sure which site.

9895. 22:27 UTC. S8 signal. Mention of Hamas and Mahmoud Abbas. Not sure of the language. Two male anncrs talking, then "oldies" type music heard at 22:29. I know Radio Netherlands runs on this freq, but Passport lists nothing for this time...

9990. 22:30 UTC. S7. Female anncr, very quiet audio. Radio Cairo, almost certainly. Sounds like reading news in English, but very hard to undertand. Followed by Arabic-sounding music with female singer.

For the time being. China holds so much debt that any attempt to flood
the world economy with US debt in order to start a global economic
collapse might well work, or cause a lot of problems.
>

I doubt that the US will turn into a communist nation. I know it keeps
you up at night, but after 60 years of being told how evil communism is,
the American people are not about to put the Communist Party in charge.
The Democrats' shift towards communism has been accompanied in a drastic
decline of Democrat political power. Now, I think that a revolution in
the US is certainly possible within the next 20 years, but I doubt that
the commies would take over. A Somalia type situation is more likely.
That would certainly make the CCP happy, but it's far short of world
communist revolution.

Carter, didn't you know that for a large segment of people nowadays, that ignorance is bliss. The more ignorant you can be, it's really something to be proud of. I mean, look at DxAce, the sock puppet, every time someone posts something relevant to freedom and democratic rule, he poor mouths those who do it. Of course, being the ignorant being he is, would you expect less? After all, in totalitarian regimes like North Korea, China, and others there is no freedom of expression other than what the ruling masters want us to believe.
I guess maybe they will wake up when their last six pack is confiscated and that Chinese shortwave radio they bought last week.

3438. Re: RF-B600

Newsgroup: rec.radio.shortwave
Date: 2006-02-20 00:14:21 UTC
From: junius <junjunius@yahoo.com>

Hey, Mike, did Lichte by chance cover the Philips/Magnavox D2999 in that book? If so, what's his take (pros and cons) on the D2999? Also, while it seems apparent from this sampling that the author took a negative view of the RF-B600, what, if anything, did Lichte like about the RF-B600?

With regard to shortwave portables, Sony was the real trend-setter in the 1980's. Next to the ICF-2010, both the D2999 and (I would guess) the RF-B600 would pale in terms of DXing capability....not to mention the fact that the '2010 came in a much smaller (and thus more realistically portable) package. Sony's ICF-2002 also made a significant impact on the shortwave portable market in accelerating the trend toward much more compact, travel-worthy portables. By 1988 or so, both the RF-B600 and the D2999 must have very much seemed yesterday's shortwave sets. Not too surprising that those looking to buy a portable in the late 80's would look toward the '2010 or ATS-803A / DX440. Also with the RF-B600 in particular being priced so high, there would be little reason for one not to look toward similarly priced communications receivers, such as the Yaesu FRG-8800 or Kenwood R-2000. Where the D2999 had any advantage was in its top-mounted 7" woofer.

Thanks.....that sounds good. In the meantime, I will also give John a
call over at Drake tomorrow. This receiver has fought me all the way, but I
finally have it completed, except for the enclosure.
Thanks again!

Pete

3442. Re: Anyone ever use a Magnavox Philips D2999 ???

Newsgroup: rec.radio.shortwave
Date: 2006-02-20 00:34:17 UTC
From: junius <junjunius@yahoo.com>
Message-ID: <1140395657.588841.289150@g43g2000cwa.googlegroups.com>
Source record: 63892

Well, I would be surprised if you didn't find better sound quality in
the Sat 800. Three nicely chosen bandwidths, synchronous selectable
sideband, etc translate into a better capability in handling incoming
signals (what, we're pitting a 1980's Philips/Magnavox portable against
the technology of the following decade's Drake SW8!). Couple that with
even the stock speaker of the Sat 800, and I would expect a better
sounding radio than the D2999.

Hey, I very much like my D2999, and I will praise its virtues; it truly
IS a nice radio for program listening, in my opinion. But make no
mistake, I prefer my Drake SW8 w/selectable sync!

The problem is that Communist China tends to be largely a enemy of the
United States. Therefore, Japan and Great Britain may hold more debt but
they are less likely to dump that debt too. Because by and far the US is
still the best place to invest. Safest too.

>> Not to mention the general indebtedness of the US population.
> Now decreasing, while "savings" have been going into IRA's which is not
> considered "savings" by the statisticians.

> The so called negative savings rate is a fallacy.

When you consider IRAs, that's a good point. However, when you look at say
1993 versus now, there are parallels.
>
>> Housing costs are at an all time high while wages and profits are
>> stagnating.
> Free market. Wage controls and price controls are >always a disaster.

For all practical purposes, the US is not at this point a free market
society say versus the 1920s. I wish it were so since obviously we have a
large dose of socialism and bureaucracy. The United States has became a tax
and spend society using YOUR money. Therefore, you are taxed at every avenue
of savings, investment, income, property, and everything in between. Yes, in
general terms the US may be a more free market than other countries say
China, Japan (a planned economy to some extent), and other socialist
countries. In fact, you could consider 3/4 of the worlds nations to be under
some sort of state socialism.

>
>> Record budget deficits, record trade deficits.
> That's what needs to be worked on. But it won't happen overnight.

The question is, how? I can't see where importing a vast majority of our
products for consumer consumption from China, which is still a

socialist/dictatorial communist country. It's a profitable relationship for corporate America because they can get cheaper labor and less taxes and bureaucratic bullhsit than here. Yes, some goods may be cheaper now, but not all. One could make the argument that lower costs overseas makes for lower product costs here. However, I don't see that as the case in all situations. One problem is that they do not open their markets the our products like we do theirs. Not to mention that you have a Wal Mart on every corner here now and its basically the company store.

Vastly much has changed economically since the 1930s. Especially that you can consider the effects of containerization, shipping, and communications changes.
Closing everything off isn't going to help matters. Because in general trade is good. But when you cannot produce your own military boots or industrial equipment, then you've lost your economic independence. Not to mention that you now dependent on others.

> have stealthy HighJacked the Democratic Party - Deja Vu in Germany.

That is true, Hitler did rise because of a fear of Communism. He hated Communism. Why else would he have attacked the Soviets and Poland. Hitler built Germany back into a nation of largely economic self sufficiency. Which was the after effects of World War I and then hyperinflation of the Weimars in the 1920s and 30s. That is why the people got behind his rule. They were pretty much down and out.

Debt is not an evil as long as it is used responsibly. You cannot gain
ownership over anything practically without some debt. Whether that is
housing, automotives, or anything else.
>
>> > Germany had so much debt, in fact, that I once read an estimate that if

:>for .it.

The masses are falling for it. But the problem is that it's not a political
solution. Republicans and Democrats, neither have a solution to any of the
real issues.

There is a guy in Ohio I think (Jeff Covelli???--advertises in 'Electric
Radio") that repairs them. He should be easy to find (web search for
Drake repair or call Bill Frost-if he is still around- at Drake) and
they can tell you who fixes the "sticky paint" problem. BTW, my TR-7 had
the sticky paint, but I just lived with it. Good luck!

Bought mine locally from an 80 year old that wanted to clean out his
place. On eBay, they seem to be all over the board, anywhere from $600
to $1200.

Too bad you missed 'em. But you really don't need a tower or amp (altho they certainly help). I'm in their log 5 times on RTTY and CW, one time with the amp off, all to a 20 foot high dipole (due to zoning and subdivision covenant limitations). Also, tougher to work them early in the game when the pile ups are a mile deep. Try them towards the end of their stay--it gets quite a bit easier.

Yes. I'm sorry, I left my brain in the other room today. What was I thinking? It's a D2935 that I have right now, not a D2999!!! This is what happens when one owns too many radios.

However, I once played with a D2999, and found it to be an excellent radio. But no synchronous detector.

I apologize for any confusion I may have caused.

I think if you were to check the finances of politicians you wouldn't
see that much difference between the two major parties. As to looks,
again it know no party boundaries other than when you hear somebody
say things that are objectionable to you they do not seem as nice
looking as they did before the mouth went into gear.

Source record: 63954

For One and All,

ABOUT - The Philips Magnavox D2999 General Coverage
'portable' {Port-a-Top} Communications Receiver
http://groups.google.com/group/rec.radio.shortwave/msg/9883533badc431db

NOTE - Recently a Philips Magnavox D2999 Radio
"Sold" on eBay (UK) for US $216.65 with Eleven (11) Bids.

PLUS - Another Philips Magnavox D2999 Radio
http://www.rffun.com/used/sold136.html
was Sold-By Universal-Radio . Com - Price $599.95

With 54 Bids and a Closing Price of $635 the eBay
Seller must be very happy.

The Modern Shortwave Radio Survey gives a 'used'
Price Range of $275-400 for the Philips Magnavox
D2999 General Coverage Receiver.
http://www.dxing.com/rx/d2935.htm
The eBay Auction Listing description made this
Philips Magnavox D2999 General Coverage Radio
sound like it was in 'nearly' "Mint" Condition.

The last few Bidders would most likely be Collectors
considering the Prices that they were Bidding for this
Philips Magnavox D2999 General Coverage Radio.

hope the seller and buyer are both happy ~ RHF

Why yes G.T. or should I say, "Starsky"? I have listened. I heard
you key up on top of a pirate doing a broadcast. You keyed up on top
of WBNY. If you are such a big fan of pirate radio, why would you key
up on a pirate doing a broadcast?

Now G.T., tell us, why would you support one retard, who keys up on
pirates broadcasting? Tell me, why can't you homosexuals find
someplace else to discuss your gerbil fixation? Isn't there a place on
the internet you can discuss gay politics without interfering with
pirates broadcasting?

Message-ID: <Tc2dnUFH2sYXXGTeRVn-gQ@comcast.com>
Source record: 63965

Hello:

Saw a can of what is apparently a "liquid rubber" type of product at HD used for coating wires, and general electrical insullation. Think it was by 3M, but don't remember.

Anyone familiar with this stuff ?

Think it would be as good, or possibly better than, something like "Coax-Seal" to use on outdoor Balun terminals, Coax connectors, etc. for weather sealing on a receiving antenna setup ?

Sure looks a lot easier than Coax-Seal, and possibly better in getting into voids, etc. ?

Pros and cons ?

Bob

From what I've found out so far it seems the fellow in Wisconsin is out of them.

Guess you could contact Hartzell Manufacturing. They made the cabinets and they
will re-do them. http://www.hartzellmfg.com/

Worst case is trying to refinish it yourself I suppose.

Will let you know if anything else shows up today.

Air America is way more real Conservative values than your average
Neosocialist Limbaugh type.

The ''Right Wing'' is the most anti-American force out there. They
are surrenderring our sovereignty to the highest bidder while robbing
the Treasury. And yakes like you blindly play along.

I have a can of it -- got it from Home Depot. Mine is called Liquid
Electrical Tape, by Star Brite, and it comes in your choice of fashion
colors :-)

It works fine for sealing connections where it's clumsy to get in with
tape or heatshrink. It seems to work best if applied in layers. Apply
some, wait a few minutes to dry, apply some more.

I'm not sure how easily it would come off, compared to Coax Seal. And
it might not work as well on larger coax connectors like a PL-259,
especially if you want to unscrew it, later on. I've used it mainly on
small, soldered connections. But it is handy stuff.

WOW !!! I expected it to go for at most $400.00. Perhaps it is hard to find
one in such good condition, both functionally and cosmetically ??? This one
seemed to be in near perfect shape. May be that was the reason....

Hi people,

Recently I came across "The Conet Project" which I am sure you have all heard about, and now I am so damn intrigued that I want to be able to hear these numbers stations too... it's hard to find out on the net exactly what kind of radio I would need for this, but I've managed to find out a few things that I will need on the radio, for example it has to be capable of SSB and a general coverage reciever etc. Anyway I found this on ebay:

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=5862269053&rd=1&sspagename=STRK%3AMEWA%3AIT&rd=1

I was hoping some of you could take a look at it and let me know of this will do the trick? I have never used a shortwave radio before and so I don't want to spend too much on my first radio, all I want to be able to do for now is tune into these numbers stations!

Thanks in advance for any help/info.

Different things have different age requirements to be antiques. Most,
if not all of your vehicles are now antiques. The hundred year age
applies only to certain things. Kinda makes you feel like a fossil,
don't it?

http://en.wikipedia.org/wiki/Antique_car

I wonder what my old Gestetner is worth. No, dxFMAO, it's NOT a German
machine gun.

In the Flesh

So ya
Thought ya
Might like to
go to the show
To feel the warm thrill of confusion
That space cadet glow
I've got some bad news for you sunshine
Pink isn't well he stayed back at the hotel
And they sent us along as a surrogate band
And we're going to find out where you fans
Really stand
Are there any queers in the theatre tonight
Get 'em up against the wall
That one looks Jewish
And that one's a coon
Who let all this riff raff into the room
There's one smoking a joint and
Another with spots
If I had my way I'd have all of you shot

Waiting for the Worms

Ooooh you cannot reach me now
Ooooh no matter how you try
Goodbye cruel world it's over
Walk on by
Sitting in a bunker here behind my wall
Waiting for the worms to come
In perfect isolation here behind my wall
Waiting for the worms to come
Waiting to cut out the deadwood
Waiting to clean up the city
Waiting to follow the worms
Waiting to put on a black shirt
Waiting to weed out the weaklings
Waiting to smash in their windows

And kick in their doors
Waiting for the final solution
To strengthen the strain
Waiting to follow the worms
Waiting to turn on the showers v And fire the ovens
Waiting for the queers and the coons
And the reds and the Jews
Waiting to follow the worms
Would you like to see Britannia
Rule again my friend
All you have to do is follow the worms
Would you like to send our coloured cousins
Home again my friend
All you need to do is follow the worms.

I doubt that i would buy an FRG-7 under any circumstance. A highly overrated radio.

I know this is not shortwave and I haven't seen this posted before,but I thought some of you might like to know "Saint FM" is streaming live on the internet at:

http://www.saintfm/listen_live.htm or...

http://www.live-radio.net/africa.shtml

I sent them a reception report for their Oct. 23, 1999 final shortwave broadcast and an e-mail follow-up report a few years later,but no joy.... :(

I have heard good reports about the DE 1102 but I have no first-hand information about the radio. I would be concerned about the warranty on it because of the cost of shipping and the manual might be written in Chinese. I am biased in favour of the Sony SW7600G but is more expensive. I would study the offerings in ebay a bit more to get a better feel for the market and read some of the old postings on this site to get opinions. We're not all smart asses on this site. Good Luck.

If you can manage to find a Radio Shack DX 394, it will have everything you need to hunt for numbers stations. On the waym you may find some interesting broadcasts as well on the shortwave bands. You will need to ground the radio (any shortwave receiver you buy will need to be grounded), and an antenna. If you can get some insulated multistrand wire into the air about 100 feet or so (30 will do if you can't do more), you will have a better chance of finding what you are looking for. You might want a "Preselector" to help tune the antenna. There are lots around, and you should be able to find them with a Google search :) Best of luck in your pursuit of the shortwave listening hobby.

www.google.com Perazzi Brescia Shotguns

I reckon those Eyetalians do make some fine Shotguns,and probally quite expensive too.Yep,I know about Snakeskin boots,mostly,they are for people who like to show off.If I was going Hunting,I would wear regular boots or if it's rainy wet weather,I would wear my rubber boots.Good enough for the Irish in Ireland,good enough for me.

I don't know where you get your news; but when I watch or listen to ABC, CBS, NBC, CNN, MSNBC, PBS, NPR etc. it is an unusual day that I don't encounter items which not only find fault, they regularly accuse them of incompetence, dishonesty, and just about everything; except perhaps incontinence.

You must be very selective in your choice of "news".

On page 5 of this .pdf document is some stuff regarding do-it-yourself repainting:

<http://www.wb4hfn.com/DRAKE/DrakeArticles/TechTips/62-DRAKE_TECH_EXCHANGE01.pdf>

I also noticed something about Hartzell charging $25 for the repaint job so that may be a good way to go.

Always wear boots and 2 pairs of pants when in the wild. Walk with a
stomp as snakes hear through their bellies. Never step where you
can't see. Same for the hands.

The 7 was intermediate technology, somewhere between the old fashioned analog dial and the digital dial. It was an attempt to make analog dials more exact, and it was pretty good for its time, but it was quickly overshadowed by the more precise digital technology. With so many digital dial receivers out there, there's no reason to buy something like an FRG-7.

www.google.com Mississippi Quail Hunting
and google,Bobby Cleveland Hunting and Fishing Archives Clarion Ledger
Jackson Mississippi

I an not sure if I have eaten Quail before,although I might have in
years past.I have eaten Pheasant before.I once shot a Pheasant when I
lived in Montana in 1956 and when I went to Sioux Falls,South Dakota in
November 1971 to buy my 1914 T model Ford car,the guy I bought my car
from had gone hunting the day before and shot a Pheasant,his wife cooked
it up.I assume Quail are similar to Pheasant as far as eating them is
concerned,absolutely fantastic delectable eating,scrumpticious Delicious
eating,those Birds are.Birds are descended from Dinasaurs,according to
an article I read last year.I haven't been Hunting since the 1950's,I
would have to learn all over again.

You mean snakeboots like these:

http://www.snakeboots.com/

Before they were snake boots they were just a tall tough leather boot.

That disputable. The alleged oldest commercial corporation in the world, the Stora Kopparberg mining community in Falun, Sweden, reportedly obtained a charter from King Magnus Eriksson in 1347.

Actually they hear through their ears. Rattlers are pretty rare up here,
though not unheard of. Being somewhat allergic to bee stings I worry more
about those lil bastards.

I watch Fox News, CNN, MSNBC (next to each other on the cable TV
lineup) very sparingly (and never for facts 'cause none of them would
know a fact if it bit them on the ass). I listen to NPR and the BBC
World Service, which while biased toward the sane, generally are very
responsible with the facts.

River Oaks would be snakeskin finished by Max Lang or some other
hi-end leatherboy.

Snake boots are more like...

"Viper Cloth is the ultimate fabric used in snakeproof boots. It is
made of DuPont Cordura nylon and has been rigorously tested by Ross
Allen, world renowned herpetologist, at Alligator Town USA in Lake
City, Fl. Viper cloth is guaranteed snakeproof against all North
American poisonous snakes."

[snippage]

Hi Chaostrophy.

The 1102 is a nice little portable, as is the DE1103 also sold by the vendor in your link.
The DE1103 is even better in my opinion, and could even cost a bit less.

In fact, the DE1103 is the best portable SW radio in terms of cost/performance on the
market.
(Also "my opinion". Others may or may not agree)
It's a fantastically sensitive/selective SSB capable performer, and next to investing
bigger money
in a tabletop
receiver I'd venture to say you can't do better for the pounds/dollars spent.

Dunno...maybe they were snake boots he bought in Texas. And maybe it
was a term some p.r. guy thought up on the fly. There are snake bite
resistant boots nonetheless.

Now that is indeed an unusual auction, because the high bidder wanted
the radio more than the second highest bidder.

www.google.com History of Cowboy Boots

The History of Boots dates back millions of years when some people migrated out of Africa and into Europe and into cold weather Country.They had to do something to help prevent frost bite to their feet.Perhaps at first they tied straw (or whatever they could use) around their feet and legs and then Leather.

NO NO SCAM - MAKE MONEY FAST - PLEASE READ
NO NO SCAM - MAKE MONEY FAST - PLEASE READ
From: "$$$ RICH GUY $$$" <A
HREF="mailto:jplaforge@hotmail.com">jplaforge@hotmail.com</A>
Date: Sun, Jan 11, 2004 9:46 AM
Message-id: <CldMb.59276$IF6.1343190@ursa-nb00s0.nbnet.nb.ca>

I found this on a bulletin board and decided to try it: A little while
back, I was browsing through news groups and e-mails, just like you are
now,
and came across an article similar to this that said you can make
thousands
of
dollars within weeks with only an initial investment of $6.00!! So, I
though
t,
"Yeah right, this must be a scam," but like most of us, I was curious,
so I
KEPT reading. Anyway, it said that you send $1.00 to each of the six
names a
nd
addresses stated in the article. You then place your own name and
address in
the bottom of the list at $6.00, and post the article in at least 200
news
groups. (There are thousands) No catch, that was it. So after thinking
it ov
er,
and talking to a few people first, I thought about trying it. I
figured, "Wh
at
have I got to lose; except six stamps and $6.00 right, right?" Then I
invest
ed
the measly $6.00.

WELL GUESS WHAT!!!
Within seven days, I started getting money in the mail!! I was
shocked!! I
figured it would end soon, but the money just kept coming in. In my
first we
ek,
I made about $25.00. By the end of the second week I had made a total
of mor
e

than $1000.00!! In the third week I had more than $10,000.00 and it's still
growing!! This is now my fourth week and I have made a total of $42,000.00 a
nd
it's still coming rapidly. It's certainly worth $6.00 and six stamps, and I
have spent more than that on the lottery without ever winning!!!

Let me tell you how this works and most important, why it works..... al so
make sure you print this out NOW, so you can get the information off of it,
as
you will need it. I promise you that if you follow the directions exactly th
at
you will start making more money than you thought possible by doing somethin
g
so easy!!

Suggestion: Read this entire message carefully!! (Print it out or download i
t)

Follow the simple directions and watch the money come in!! It's easy. It's
legal. And, your investment is only $6.00 (Plus postage)!!!

IMPORTANT:
This is not a rip-off, it is decent; it's legal; and it is virtually no risk
-
it really works!! If all the following instructions are adhered to, you will
receive extraordinary dividends.

PLEASE NOTE:
Please follow the directions EXACTLY, and $50,000 or more can be yours in 20
to
60 days. This program remains successful because of the honesty and integrit
y
of the participants. Please continue its success by carefully adhering to th
e
instructions. You will now become apart of the Mail Order business. You are
in
the business of developing Mailing Lists. Many large corporations are

happy
to
pay big bucks for quality lists. However, the money made from the
mailing li
sts
is secondary to income, which is made from people like you and me
asking to
be
included in that list. Here are the four easy steps to success.

STEP ONE: Get six separate pieces of paper and write the following on
each
piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 U.S.
$1.00 bi
lls
and place ONE inside of EACH of the six pieces of paper so the bill
will not
be
seen through the envelope (to prevent thievery). Next, place one paper
in ea
ch
of the six envelopes and seal them. You now should have six sealed
envelopes
,
each with a piece of paper stating the above phrase, your name and
address,
and
a $1.00 bill. What you are doing is creating a service.

THIS IS ABSOLUTELY LEGAL!!!!!
You are requesting a legitimate service and you are paying for it!!
Like mos
t
of us I was a little skeptical and little worried about the legal
aspects of
it
all. So I checked it out with the U.S. Post Office (1-800-238-5355) and
they
confirmed that it is indeed legal!!

Mail the six envelopes to the following addresses:

1) L.Lessard
40 Martins Ferry Rd
Hooksett,NH 03106

2) J. Safian
6950 W. Forest Presrv. Dr., #115
Norridge, IL 60706-1324

3) R. Sears
812 Michelle Court

Montgomery, AL 36109

4) Q. Huda
1212- 1315 Bough Beeches Blvd.
Mississauga, Ontario, L4W 4A1

5) M. Atkinson
1950 Lois Pointe
Smyrra, Ga. 30080

6) G Ojijo
1333 W McDermott Dr # 100
Allen Tx 75013

STEP TWO: Now take the #1 name off the list that you see above, move
the oth
er
names up (six becomes 5, 5 becomes 4, and etc.) and add YOUR NAME as
number
6
on the list.

STEP THREE: Change anything you need to but try to keep this article as
clos
e
to original as possible. Now post your amended article to at least 200
news
groups. :
(I think there are close to 24,000 groups) All you need is 200, but
remember
,
the more you post, the more money you make!! This is perfectly legal!!
If yo
u
have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal
Lottery la
ws.
Keep a copy of these steps for yourself and whenever you need money,
you can
use it again, and again. PLEASE REMEMBER that this program remains
successfu
l
because of the honesty and integrity of the participants and by their
carefu
lly
adhering to directions. Look at it this way. If you were of integrity,
the
program will continue and the money that so many others have received
will c
ome
your way.

NOTE: You may want to retain every name and address sent to you, either on a
computer or hard copy and keep the notes people send you. This VERIFIES that
you are truly providing a service. (Also, it might be a good idea to wrap t
he
$1 bill in dark paper to reduce the risk of mail theft). So, as each post is
downloaded and the directions carefully followed, all members will be
reimbursed for their participation as a List Developer with one dollar each.
Your name will move up the list geometrically so that when your name reaches
the #1 position you will be receiving thousands of dollars in CASH!!!
What a
n
opportunity for only $6.00 ($1.00 for each of the first six people listed
above) Send it now, add your own name to the list and you're in
business!!!

*****DIRECTIONS FOR HOW TO POST TO NEWS GROUPS!!!*****

STEP ONE: You do not need to re-type this entire letter to do your own
posti
ng.
Simply put your cursor at the beginning of this letter and drag your cursor
to
the bottom of this document, and select 'copy' from the edit menu. This will
copy the entire letter into the computer's memory.

STEP TWO: Open a blank 'notepad' file and place your cursor at the top of th
e
blank page. From the 'edit' menu select 'paste'. This will paste a copy of t
he
letter into the notepad so that you will add your name to the list.

STEP THREE: Save your new notepad file as a text file. If you want to do you
r
posting in different settings, you'll always have this file to go back to.

STEP FOUR: You can use a program like "postXpert" to post to all the
newsgro
ups
at once. You can find this program at <http://www.download.com>.
Use Netscape or Internet Explorer and try searching for various new

groups (
on-
line forums, message boards, chat sites, discussions.)

STEP FIVE: Visit message boards and post this article as a new message
by
highlighting the text of this letter and selecting paste from the edit
menu.
Fill in the subject, this will be the header that everyone sees as they
scro
ll
through the list of postings in a particular group, click the post
message
button. You're done.

Congratulations!!!!!!

THAT'S IT!! All you have to do, and It Really works!!!

Best Wishes

They also have audio problems. They are at times under-modulated, over
modulated and splattering adjacent frequencies, missing the high end
audio or just plain distorted. The defective audio changes with program
content and the transmitter being used so appears to be related to both.

well, right now, the bid is $53.00 (which is more than reasonable for this device).

that power cord looks to be a replacement, but if wired correctly, I don't see a problem with it.

However, the description in the ebay listing is, for the most part, misleading. since when does "exceptional condition" include marks on the speaker grill, misalignment of the plastic rim and the metal body and that glaring replacement power cord.

Ditto... this is my coax and connector sealer of choice the last 5+ years.
Much easier to remove, too, than "Coax Seal".

Guy

Hey Mike
That is one very impressive collection you have there, I bet it took you a while to get that lot.
I have taken a shine to the FRG-7 you have there, I would certainly like that radio..
Well done on your collection.
regards
Rikk

It is carried around here on KIST 1340 talk radio out of Santa Barbara
and I have listened to it. I have been sorry every time I have so far.
The programs are nether informative or entertaining. The programs are
boring and most of the time the air personality just takes cheap shots
at politicos and generally don't back up their views.

The worst criticism I can level at them is the repetitive nature of the
speech. For instance one person said the word "stupid" about a dozen
times over a couple minutes time. I want to throw a shoe at the radio at
that point. I don't even remember who the air personality was (male) or
who he thought was "stupid" but I just could not listen to it anymore. I
hope people reading this understand that it has nothing to do with his
opinion just that I hated the delivery similar to hearing the same

insipid commercial for the one hundredth time.

It's too bad I'm about to move to a new house, Junky, but don't think I've forgotten about you. When I get back, I'll be dying to know all the gory details of your drug abuse. It's interesting that you didn't include any mention of that in all the off-topic crap you post to this group.

I guess if you don't want to talk about shortwave, at least now we'll have something else to talk about that's halfway interesting.

I bet that their equipment is the SAME STUFF that was installed by the
USSR in the early 60s when Cuba first went communist. It is old, and it
is likely close to failing. The former Soviet Bloc is full of old,
half-dead former propaganda blowtorches that now broadcast various paid
programming and Russian domestic stuff at half the original power.
Considering Cuba's dire circumstances, such as concrete buildings that
are held up solely by wood beam props, it wouldn't surprise me if the
Cubans were cannibalizing dead tx's to keep the living ones going, like
they do in Laos.

Actually, the station is in Thornton, a near northern suburb of Denver and farther from Boulder than Denver. It broadcasts out of the Clear Channel cluster facilities in Denver, and behaves like a Denver station. It is not in Boulder.

Still having trouble with your radio stations, I see.

It suprises the hell out of me at the self proclaimed outdoorsmen here that
didnt catch the "Bullshit" in the actual article he provided a link to..

reffered to as a "Over and Under shooter" ??????????

Refers to the gun....not the actual shooting!

You can shoot a double barrel side by side.

You can shoot an over and under...vertical stacked version of a double
barrel.

You can shoot an automatic or a pump shotgun.

You can shoot a single shot.

This article is bullshit....The people ot beretta can tell you the same
thing! I own several.

Nice try Disease! (Rickets)

But as DXACE would say...

Wrong as usual TARD!

There is a Modern Liquid rubber called GOOP sealant/adhesive in the glue section of the hardware store

I LOVE it! It STICKS things together irrevocably. I use it to repair evrything.

It IS goopy, but in the 12 hours to takes to harden it "flows" and self levels.

The SAME stuff is sold as SHOE GOO and I use it to repair the "tennies" Dries to pure rubber.

In outdoor applications a UV resistant variety is offerred as Marine goop

Both Japan and the UK hold more US debt individually than China.
What Communist China would get for selling its US Treasuries would be either
a fistful of US$ or some other currency.
Paper for paper. Those Treasuries sold on the open market would be
purchased by another country like Japan, UK or EU or...
.
The net result of a massive China sell out would be the economic collapse of
China while the US blows its nose. China's economy is small compared to the
combined economies of the US, Japan, UK & EU. But again, it is unlikely to
occur.
Although the Communist Party is in power in China the main Chinese Communist
Party players are more interested in remaining in power to make money.
Selling US Treasuries will certainly threaten if not significantly reduce
their profits.

> That would certainly make the CCP happy, but it's far short of world
> communist revolution.

Communism won't "take over" like you describe. The prelude to Communism is
Socialism which is how the Democratic Party can now best be described. If
you dig into the background and "connections" of many Neo-Liberals now in
office (Calif. for example) and those attempting to nudge there way into the
Democratic Party you will find disturbing relationships with known global
Socialist and Neo-Communist organizations.

Try putting Cindy Sheehan's name in www.discoverthenetwork.com and click all
the inter-related links and you will find
die-hard Communist organizers among her campaign.

The DE1102 is probably a decent enough selection. If all you're
wanting to do is to listen to number stations, I wouldn't sink too much
money into a radio. Go with something relatively inexpensive like
this. If for some reason these number stations continue to hold your
interest over the longer term, then you could consider upgrading later.

My personal shortwave listening experience goes back a couple of decades, having owned at least two dozen portables and several tabletop receivers.

Having used mine extensively, I believe that the DE1103 is the best performer in its price class by far... there isn't even anything close that I'm aware of (except for maybe its little brother, the DE1102!). For around $50.00 US for the direct-from-Shanghai version, you absolutely cannot go wrong. Yes, there are receivers out there that'll blow away the DE1103 on their worst day, but be prepared to shell out mucho dinero for them.

I was recently lent a Sony ICF-SW7600GR to play around with for about a week. This receiver is often touted as one of the best portable performers. It's got the sychronous selectable sideband feature that the DE1103 lacks. Yes, the Sony is a very good performer, but it's also 3x the price of the DE1103.

After the good-performing portables are taken into consideration, the next step up in performance will have you looking at paying perhaps 10x the price of the DE1103 for a good tabletop receiver. You can spend anywhere from $500 to $5,000 in that category.

Piracy is a BIG problem in China. If you have ever spent some non-tourist
time in China you would know.
Almost all Chinese owned businesses use pirated Microsoft products.
Individuals have access to and are even encouraged to use pirated software
from the US and elsewhere. ANYTHING not made in China that can be pirated
or copied is done so. There is no enforcement or following of the "Rule of
Law" in China. Occasionally you will see token enforcement but that is
insignificant. Intelectual poperty rights has no meaning in China. It is a
completely foreign concept to the Chinese. This is not fair trade or even
free trade. It is simply robbery!

Nobody said anything about protectionism. We need to more effectively use our economic clout as a consumer of Chinese products in our foreign policy towards the Communist regime in Beijing. The problem is that the current administration is affraid to upset the corporate profit apple cart.

> But when you cannot produce your own military boots or
> industrial equipment, then you've lost your economic independence. Not to
> mention that you now dependent on others.

The products the Chinese manufacter are not unique to China. The majority of Chinese products are low end to mid level manufactered products which any country could relatively easilly ramp up into production. I can't think of a single Chinese product that has the remotest possibly of crippling the US if it were made not available. But this point is moot since the Chinese economy would collapse much sooner and quicker than any well developed Western economy if severe economic perils washed onto their shores.

The US has so far weatheredEnron, the Internet Bubble of the late 90's, 9/11, two on going wars, Katrina and other major weather diasters, all in the last 6-8 years. What makes you think China has any serious strategic stranglehold on the U.S. is beyond my comprehension.

The Communists in Germany had some clout. The Russians instructed their German Communist counterparts to "allow" Hitler to take power. If it weren't for the Russians it is very possible that Hitler would have lost the election.

Yes, that is what I believe also. HOWEVER, the Democrats are moving in the
completely wrong direction.
They are increasingly and are dangerously close to becoming a "Socialist"
party. While I am not completely in favor of the hell bent on "Capitalism"
that the current administration seems to heartily endorse, I find them far
less innocuous in terms of my well being and personal economy. Unless you
live in Venezuala or pan-handle on the streets of San Francisco I am sure
you would agree.

Saddam and al-Qaeda

The proof has been right in front of you the entire time. Documents available on the internet, which pass the smell test and are probably genuine, show the link between Saddam and al Qaeda.

http://www.americanthinker.com/articles.php?article_id=5267

The documents referenced in the above article, as well as these http://www.ctc.usma.edu/aq_harmonylist.asp give you a window into this movement, where mujahideen network across Iran, Syria, Palestine, Bosnia, Afghanistan, Europe and elsewhere. The cartoon riots have shown us how skillfully these instigators can find and manipulate fellow travelers among their coreligionists.

I personally know listeners in mainland China who regularly tune in Sound of Hope. They often tell me about news stories that are never even mentioned by the Communist regime. If you would like to have even a small impact on the collapse of this hideous Communist regime in China please donate what everyou can.

Sound of Hope's Daily Broadcast into China Increases to Six Hours
...
Sound of Hope also has plans to broadcast for 24 hours every day into mainland China. The plan intends to collect donations from society that will pay for short and medium wave broadcasting timeslots. By broadcasting 24 hours a day, Sound of Hope's believes it will provide "24-hour Hope Waves" for all the Chinese people, who, under the dictatorial CCP regime, are denied all freedoms of the press and airwaves.
...
http://www.theepochtimes.com/news/6-2-19/38343.html

Please - make a donation to Sound of Hope for short-wave broadcast to China:

Don't matter about the paper China holds.. what would wreak havoc on not only the US but most western economies and probably all eastern ones would be if they just quit supplying us with cheap goods. Sure, it would hurt them, but it's not like they haven't been there before..

I should point out that Sound of Hope is headquartered in "Calipornia",
that place you hate so much. I heard them in the wee hours of the night
one time about two years ago when they broadcast on the upper end of
31m. At that time, Passport said they broadcast from Palau. Apparently
they have moved to Taiwan to better cover China. Risky, considering
Taiwan's precarious position, but they can always move if needed.

The point would be to flood the market with US debt, thus making it impossible for the US to sell any more debt. Although I should note that just refusing to buy any more debt would have a similar effect. Strange how you scream about Communist China's threat to the US, but when presented with a way that China could realistically cripple the US without the use of "molecular nano superweapons" or some other fantasy, you are quick to discount it. China is the second or third biggest holder of US debt. Any action by China to destabilize the US debt load would have serious consequences.

> Socialist and Neo-Communist organizations.

Well, yes, but communism has always advocated an abrupt "people's
revolution" in order to seize power. Read up on the Russian revolution
of 1917, and how the communists forcibly overthrew a democracy
established just a few months earlier, then brutally suppressed popular
opposition in order to stay afloat, THEN deliberately created a famine
in order to subjugate the people. There are communists who have
advocated Israeli-style gradualism, but the idea of violent revolution
in order to create an instant "workers' society" has been and is very
powerful in communism. Marx himself advocated a rapid and violent
overthrow of capitalism. Even in China the Maoists wore down a
democratic government by waging a civil war up to the point where the
govt was weak enough to be forcibly overthrown. Make no mistake, the CCP
would prefer to see violent world revolution rather than wait decades
for the communists to worm their way into the existing govt.

The profit comes from the labor "savings" generated by firing high paid
workers elsewhere and hiring low paid Chinese. Basically, we are buying
tons of Chinese products while China is buying zero of ours (as you
noted, they pirate and copy with impunity).

I think you are overestimating the flexibility of the American economy.
The problems that the US has faced in the last decade are miniscule
compared to the Great Depression. A nation with massive debt and
producing virtually nothing is not very stable.

> live in Venezuala or pan-handle on the streets of San Francisco I am sure
> you would agree.

And there lies the problem. There is no serious alternative to the
current state of affairs. Both parties are big spenders and thieves.
There is simply no alternative to wealth redistribution. The Republicans
want to give the people's wealth to the rich, the Democrats want to give
it to themselves. We desperately need a third party in America. Israel
is facing the same problem, and if it hadn't been for Ariel Sharon
starting a third party, they wouldn't have a choice either. Most of the
opposition to the robbing of the treasury by a favored few comes from
communists who want a piece of the action. You're just replacing one
favored few with another.

3661. What's wrong with my radio?

Newsgroup: rec.radio.shortwave

My Yaesu FRG-8800 has been acting strangely. Tonight while listening to the BBC on 5975 I had blasts of static interrupt the broadcast. Finally around 0310 the broadcast became inaudible. This is a problem with my radio, since ALL stations all across the spectrum are now inaudible. I tuned up to 6050 khz as well as checked WWV on 5 Mhz and everything has gone deaf. I suspect that my troubles with listening to Cuba are related to the same problem. A week ago I had a brief problem where a very staticky Radio Australia swamped the spectrum. What could possibly be wrong with my radio? How can I contact Yaesu? I had their contact info years ago when I had to send my radio in for repairs twice, but I lost it.

I very much prefer analog radios for DX'ing. For one thing, they've enough
more tuning versitility to allow me to pull in a station from underneath the
ubiquitous jamming that pervades MW and SW over here. I had an FRG-7, ended
up letting someone talk me into selling it. I've regretted it ever since..
and will be getting another one someday..

They haven't been communist in years. Look up 'The Corporate State'.
Mussolini and fascism. In that scenario, the corporations have almost
free reign while the government controls the work force. It's a business
man's dream come true.

70 bucks??? That's too much IMHO. The d1875 is a little known gem on shortwave (ultra sensitive off the whip without many birdies) with mellow sound but it's just an analog portable after all.

I pulled my Degen 1102 out of storage, and everything is fine on that
radio. I unplugged my Yaesu and plugged it back in after 15 minutes, and
suddenly it was ok. It is definitely the Yaesu, maybe a corroded
connection. At least I have a backup. But listening to Cuba is
frustrating on the Degen, since the limits of the Degen's circuitry
exacerbate the problems with Havana's audio, making mush out of most of
the broadcast. Tonight they were talking about the secret terror suspect
shuttle service, and how terrible it was that America has 12.5% of its
population living in poverty while the rich build giant shopping malls.

Thanks for drawing it to my attention. It was difficult to find it at the link you provided - here is the direct link http://strategis.ic.gc.ca/epic/internet/insmt-gst.nsf/en/h_sf05378e.html .

I did explore the file a bit with a hex editor and extracted a sample question:

```
.........................................
B-008-01-05 (2)
When the signal from a transmitter overloads the audio stages of a broadcast
receiver, the

transmitted signal:
is distorted on voice peaks
can appear wherever the receiver is tuned
appears only on one frequency
appears only when a station is tuned
.........................................
```

The correct selection is stored in the parentheses and refers to the line number after the colon or question mark that marks the beginning of the answer selections.

You can easily find the beginning of the question set by searching the file for this marker: [TEXT]. Then you have to page down until you find it changes to French, or carry on if you want that, too.

A free Hex editor is XVI32 at http://www.chmaas.handshake.de/delphi/freeware/xvi32/xvi32.htm . I used its Block Mark and Copy functions to paste the selected data into a new file created by XVI32. For whatever reason, its clipboard copy does not paste into Notepad.

Thanks Mike,

Jerry Strawman sent me the contact information this morning. I ordered one
of his last two items.
Thanks again!

Pete

Thanks Steve,

I was able to get one ordered at 8:30 this morning. A friend of mine checked his website at around 9:30 and the listing for this item was removed from his website.
In the meantime, I purchased a sandblaster.....I intend to glass-bead blast the two covers I have right now and make them available to those who might need them. Both of them appear to have been repainted over the gooey stuff, so I need to get them clean, down to the metal.
Thanks to everybody on this NG!

I had also thought about that, but since I will be stripping the finish off by glass-bead blasting it, I might take the enclosures over to an auto body paint shop and have them sprayed with a powder coat finish.

When you are glass beading or sand blasting,be sure to wear a good respirator that has good filters and a face shield.Unless you do the work using an enclosed box.There are plans on the internet about how to build your own sand blasting box.Silicosis of the lungs isn't a good thing.

DaviD {Oh 'you' "Snake"} - Caught By His Own "Skin" . . .
Giving the "Boot" to the Truth

Yes - DaviD - Posting another Liberal Lie {Half-Truth}

Yes - DaviD - Manufactured Left-Wing Distortion

DaviD - 'you' are the "Dan Rather" of this NewsGroup :o)

DaviD - The Truth Be Told the Washington Post OnLine
NewsPaper Article that 'you' Posted used the Term :
Texas "Snake Boot" (two words)
http://www.washingtonpost.com/wp-dyn/content/article/2006/02/18/AR2006021801147_pf.html

DaviD - Point-of-Fact - The Word "SNAKESKIN"
was never, Never. NEVER ! Used in the Article.
http://www.washingtonpost.com/wp-dyn/content/article/2006/02/18/AR2006021801147_pf.html

Yes - Just Two 'simple' Words DaviD :

SNAKE - {Texas Rattlesnake) Any of various Venomous
{Poisonious Deadly} Snakes of the genera Crotalus and
Sistrurus, having at the end of the tail a series of loosely
attached, horny segments that can be vibrated to produce
a rattling or buzzing sound.
- - - VENOMOUS - Secreting and transmitting venom :
a venomous snake. - VENUM - A Poisonous secretion
of an animal, such as a snake, spider, or scorpion,
usually transmitted by a bite or sting. - POISON -
A substance that causes Injury, Illness, or Death.
http://dictionary.reference.com/search?q=Rattlesnake
http://dictionary.reference.com/search?r=2&q=Snake

BOOT - Protective Footgear (Footwear), as of leather
or rubber, Covering the Foot and part or all of the Leg.
http://dictionary.reference.com/search?q=boot

Nothing Fancy DaviD - Just a good old "Snake Boot"
that is designed to help the Wearer {Hunter} to "Protect"
against Snake Bits while in the Outdoors.

ABOUT - "Snake Boots"

The 8800 is known to be kind of squirrelly. Every one I have had or
played with locked up, or went deaf suddenly. Resetting or unplugging it
seems to solve it. My old 8800 would lock up to the point I had to take
the batteries out and put them back in to get it to come back to life.

I wish Yaesu had come out with a true competitor to the R71A or JRC 525.
The 8800 just didn't cut it. I did like mine though.

My mistake G.T.:

However, if you would check the facts before you make assumptions, you'll see that "Starsky" has been answering his own thread, that is until you poked your big nose into it. Now can you stay focused long enough to answer the questions? Or is that too much to ask. Clearly you must be on some "meds" or you could stay focused long enough to answer. You jumped into this, with your snotty comments, so respond like a big boy, ok? If you will re-read my post, I never said you were involved with WBNY, but then that would take some degree of comprehension, which you clearly lack. I said that (if) you're Gay Starsky, you "Keyed up" on WBNY. Big difference. So try to answer the question and not read too much into it.

Why do you support this retard(Starsky) who keys up on pirates who are doing broadcasts? If you girls are such big pirate fans, why would you key up on one while they are doing a broadcast?

Too tough a question? Or do you just want to throw your ignorant 2-cents in and not be responsible for your involvement? Interesting that your response if similiar to "Starsky" and "Sparky", who by the way, are the same person, as they have the same IP. Haven't checked yours yet. But I will. Now go back to your tinker toys little man and leave "Starsky" to explain why he is keying up on pirates, to him. If you don't know why, then go away, this isn't your fight.

If you want to have a battle of wits, come better than half prepared. (get an adult to explain this to you)

You may want to remove the cabinet screws and get some freeze spray
handy. Next time it happens cool each component one at a time to see
if you can isolate the anomaly.

Hello Bob.

As those radios, when new in the late 1950s, sold for about $250.00,
adjusting for inflation and taking into account that this particular
unit was a "demonstrator," an equivalent price today would be about
$2000.00.

If you are a collector, or formerly owned one and you want to
"recapture your youth," anything under $2000.00 would be a good price,
in my opinion.

But think - for $2000.00 you could buy a "loaded" AOR AR7030 Plus which
will "run rings" around the Zenith Trans-Oceanic in reception
performance, sound quality, and overall reliability.

But, I suppose, those two radios would be attractive to two different
markets.

Best,

Joe

Remember, EVERYTHING that Radio-Mart sells is in "exceptional"
condition, the finest he's ever seen, yadda yadda yadda.

After all, that allows him to use "private auction" feature :-).

All that said, he does manage to buy stuff at E-bay prices and resell
it (sometimes cleaned up, sometimes repainted, always described in the
most ridiculously hyped up condition) at E-bay and presumably is
turning a profit. Most folks who would attempt this in any category of
merchandise would wind up losing money, or at most making a few bucks
an hour for the effort (less than you could make pushing carts at
Wal-Mart realistically). If Martyn is doing better than that and
manages to have time to play with and enjoy the radios he buys and
sells, maybe that's good for him.

I know that some of my favorite sellers of radio stuff on E-bay are
basically part-timing as dealers too (although usually not buying on
E-bay, usually picking up stuff from estates etc.) although they don't
do the hype+private auction+stupid terms etc. of Martyn.

Tim.

3718. 20 Meter Dipole - instant DX!!!

Newsgroup: rec.radio.shortwave
Date: 2006-02-21 16:35:32 UTC
From: Radio TexMex <ke5ckrIGNORECAPS@gmail.com>
Message-ID: <dK-dnaQIc_uG3GbeRVn-iA@giganews.com>
Source record: 64170
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.antenna

For the last 6 months I've been using a 1/2 wave 40m dipole sloping from an oak tree in the back your to a peach tree in the front. This has worked great for 40. I use this for amateur activity as well as SWL stuff with an MFJ tuner. I always noticed that on some bands, particularly around 20 meters, I couldn't receive as well I thought was possible. The closest thing to DX I've worked was a station in Costa Rica.

Well I finally got around to stringing up a simple 1/2 wave dipole with a 4:1 balun, cut just for 20 Meters. I strung one end from the same point the in the oak tree that my 40m dipole uses but I wanted to keep them angled at least 95 degrees away from each other to keep them from interacting. Because of this, I ended up sloping this fella down into the backyard between the oak and another tree and tied it off to a martin house. I was worried about the fact that I couldn't position this dipole any better away from the trees - and/or higher.

I finally got a chance to try it out yesterday after all the above ground power line noise dyed down, and wouldn't you know it, ACTIVITY EVERYWHERE on 20!!! Way more than I'm use to hearing with my 40m and the tuner.

The 3rd station I worked was in Serbia!!! And I can only squeeze 50 watts out of my Yaesu FT101B on 20m.

Moral of this story: I've learned you can only get so much performance out of an unmatched antenna with a tuner.

Cheers! - Matt

The D-1875 is a decent little radio. But there are many other radios at $65.00 that will provide full coverage, comparable if not better performance and useful features like digital tuning, memories, filters, etc.

Generalizing by the same sort of problems with my Kenwood R-1000,
I'd first look at the power supply cabling and connectors. 1980 era
Japanese radio designers thought those 2.5 mm connectors were really
neat and managed to design stuff that tried to put way too many amperes
through one really small contact. Look for connector shells turning brown
or pins in the terminal strips/headers that have desoldered themselves
from the PC board.

Yeah. I remember when I spoke with a RS employee
who'd become a manager after I'd left,
he was talking about all the perks and other items
adding up to around 35k a year. This was in the
mid/late 90's. When I was working there 5-7 years
earlier, they used to tell managers the same thing
(even the same dollar amount). When the tech
bubble came along around that time, was there
any wonder that the people who were tech savvy
would skip on a Radio Shack and go straight to
an IT position at another company?

When I was there, I knew managers and full time
employees who had been there since the 70's, who
had actually built an Tandy Model 1, and were
clamoring for things like more ham equipment,
better electronics stuff, and more audio and video
component materials for cars. Those guys and their
expertise are long gone, as the emphasis at RS has
long since changed.

3730. Sony SW100 + KA31/DE31 active antenna ?

Newsgroup: rec.radio.shortwave

From: Charly <No.Emails@No.Spams>
Message-ID: <43fb5d00$0$17374$626a54ce@news.free.fr>
Source record: 64181

Dear all,

I'm wondering wether I can use my Kaito KA31 active antenna (aka Degen DE31) with a Sony SW100 radio... The manual says not to use any other antenna (at least connected to the antenna jack) because of the 3v DC the radio supplies to the AN100 antenna designed for this radio...

I don't want to blow up the antenna or the radio...

Any advice around there ???

Thanks in advance,

Charly

At one time you could count on a Radio Shack store having a reasonably complete collection of electronic parts, various components and an extensive collection of batteries. And store managers that in some cases understood something about the goods they sold. But no more. R.S. stores look more and more like the consumer electronics department from a Target Store without the good prices.

I don't think they could have made it this far if they remained a store that catered to electronic tinkerers. There are fewer home tinkerers to sell little bags of expensive parts to these days. R.S. has to re-invent itself, but I'm not sure what niche they should fill.

I've been using RG-8X the entire time. I have some 450 ohm ladder line laying around. Would you suggest trying that, or something other than the coax?

For new shortwave listening hobbyists. You can often make an identification more quickly if you
can identify the language being used. While it is not an absolutely foolproof technique, it is helpful. Some countries, such as Britain and France, transmit programming in the languages of their target audiences. Some stations transmit programs for countries and organizations who cannot afford the same kind of facilities for themselves, so a separatist movement in a place such as Ethiopia or Somalia may send their broadcasts pre-recorded for transmission by way of another country such as Britain or Russia who have transmistting facilities that are capable of reaching all around the world.

Some countries use shortwave the way we use medium wave. Brazil is a country that uses shortwave to reach its most distant inhabitants with news, sports and weather. Their signals may not be the strongest, but they can reach all the way up here in Seattle. It may take a bit of listening over a period of time to make the identification given listening conditions, but eventually you should be able to score.

It can take a while to appreciate the difference between Japanese and Korean, but they are sufficiently distinctive. African languages such as Arabic and Swahili are frequently used in Africa, but then so is French. Many nations that are now independant were colonies of european countries and they learned to speak the language of their colonizers, so when France broadcasts to countries they once colonised in Africa, they will use French. An interesting language used in the Phillipines is Tagalog which is a native language that is sprinkled with foreign words immediately recognised, including English.

Pick up a copy of Passport to Worldband Radio. They post the schedules of just about every shortwave (HF High Frequency) broadcaster in the world showing graphically which language they use and what power output as well as the timeslots they use and the origin of the broadcast. In addition they post news about receivers and accessories as well as the latest trends. They also discuss receiving conditions and review equipment so you can make an informed choice of receivers and equipment.

I hope this little tidbit will be helpful.

I've never owned that particular small radio, but a ton of others. If I was a betting man, I would bet your results would be poor using an active antenna. Probably 8-10 feet of long wire is about all that little radio can take before overloading the front end. More than that and you'll hear images and junk all over the spectrum. An active antenna would be much worse!

Try a few feet of simple wire and see what you get. Sell the active antenna on eBay to finance the wire if you have to - he he. You'll still have left over $$$.

I would! Use the ladder line and get rid of the balun. Much more
broadbanded solution. You CAN use a tuner at the rig to tune the
antenna, but if all you do is receive, it will work quite well. I
currently use a 200 foot dipole with ladder line and a tuner in the
shack. Works great just about anywhere I go. No coax and no balun
makes that possible!

-Tim

You could make a simple box out of plywood and cut two holes for long vinyl heavy duty industrial type of gloves (cut a couple of plywood rings and use screws to fasten the gloves to the box in case you ever need to replace the gloves) for your hands and mount a piece of glass or rigid plastic (check out some auto junk yards) on the front of the plywood box and have your own sand blasting/bead blasting cabinet.Perhaps add a hole on the rear of the box with a piece of plastic or metal tubing and put the vacuum hose to an old vacuum cleaner on the pipe.A rig like that,you would probally find handy to use many times.

Wire in a series capacitor to block the DC from the radio. A .1 uF 16V
should do fine.

Yeah, someone just pointed out, via email, the jack-assery I have going on by using that balun. I just did some much needed reading and clarified to myself *again* exactly what baluns do. And in this case, there's no need for a 4:1 balun. I'm going to take it off and I *should* still get the desired results.

Thanks! - Matt

So what happened? The auction was pulled with no other information when
I used the link.

If located in the shack the tuner only causes the combination of coax
and antenna to look like a 50 ohm impedance to the transmit output.
This is good for the transmitter output but the antenna does not
radiate or receive any better. A dipole will load very poorly at 2X the
frequency it resonates at.

Lately the the MUF has been somewhere in the 18 to 21 MHz range and a
good operating frequency would be about 80% of the MUF.

Tuners in the shack are just band-aiding an antenna loading problem. A
tuner at the antenna input is better but nothing takes the place of the
antenna itself being the right electrical length.

Before someone beats me too it, I've already had somebody point out the
goofy flaw with my new super awesome 20M dipole. And after doing some much
needed reading on baluns, I've concluded that the 4:1 balun *isn't* needed.

Readers: Please be patient. Learning process taking place here.

Thanks Tim for the advice...

I tried the wire and the active antenna with an ATS 909 : The wire does a great job when you can extend it in an "open area"... In some buildings or hotels made of steel+concrete you must put your wire outside... when you can open windows !

With the small active loop, you just put it in front of the window...

In general, the active antenna (at least the one I own) outperform the wire in most cases... and it can also help keeping noise level a bit lower than with a wire.

That's why I'm asking with the SW100...

Charly

I also own a nice little Toshiba model number RP-F11 AM/FM/Shortwave radio.It is about the same size of my Magnavox D1875 radio,but not quite as thick front to back.It has 11 bands,the signal meter doesn't work and it wasen't working when I bought the radio at a Goodwill store for about four dollars.Other than the signal meter not working,the radio does work ok.It has 11 little push buttons for selecting whichever bands and one push button for Power Off and one slide switch on the right hand side of the radio for Saftey/Hold/Release.

On the left front side there is a slide switch for Volume and below that is a slide switch for Tone/H/L/Voice.On the left edge side there are three jacks for Rec Out and and Phone and DC IN 6V.On the back of the radio there are two screws for antenna connection and antenna ground connection and on top there is a whip telescopic Antenna.It is really a nice little radio,it works ok.I would like to find some reviews on the internet of my Magnavox D1875 II Band Receiver radio and my Toshiba RP-F11 radio.Anybody?

Oh great, another one of these. Alex Jones is already doing everything you mentioned. He gets re-broadcasted on little FM micro-broadcasters all over the US. No-one (FCC) seems to care, or has the time to care about all of these so-called Part 15 Micro-broadcasters. The ones here in Austin are *clearly* using more power than whatever the FCC states is legal for Part 15 transmitters - and have been for a few years. It seems like the FCC isn't going after these guys (Radio Free Austin) like they use to.

If you're gonna do the pirate thing, why not at least be somewhat original. Play some Frank Zappa or something weird. Do something that will catch a browsing listener's ear.

I think Alex Jones has all your conspiracy broadcasting covered.

Cheers,
Matt

Well, there's been no mention of BPL here. No big announcements,
nothing. I SUPPOSE it could be computer related, since my PC is in close
proximity to my rx and is on while I'm listening. I have an ethernet
setup that was just recently installed, and this is my first time
listening to SW since I got the ethernet installed and started leaving
my PC on all the time, so I suppose it could be something to do with the
PC or the ethernet. I'll turn off my PC and unplug the network cable
tonight and see if that helps. By the way, most schools have an ethernet
setup, not BPL.

RSA Johannesburg had a great interval signal, with chirping birds and a delightful string instrument tune, probably a guitar or similar instrument. Last time I heard that was back in the 1970's. I doubt if we'll ever hear that again on-the-air.

And of course Brother Scare would come up on 6090 right at 2205.

Though I don't currently have a sound card, that interval signal is, I believe,
available on this site:

http://www.intervalsignals.net/

Enjoy.

Haven't checked in the daytime. Last time I checked 11 Mhz band, it was totally dead. This was around 2000 UTC. I did notice a LOT of birdies however, which I attributed to my computer. It seems that I'll have the Yaesu go dead, I'll turn it off and unplug it for 15 minutes, then it will be fine. I haven't noticed any similar problems on my Degen.

> you don't know why, then go away, this isn't your fight.

Do you have a job? Do you ever leave your radio and/or computer and
interact with people in the real world? Do you make a habit of turning
every conversation into a confrontation?
>

> If you want to have a battle of wits, come better than half prepared.
> (get an adult to explain this to you)

Again you obviously have mistaken me for someone else. You seem quite upset over the actions of "Starsky" or "Sparky" or whoever; however I suggest you direct your anger at the right person. Unless you are afraid of that person. You are correct when you say this isn't my fight, so unless you flame me again, this is where I step off the train.

Radio Havana's jazz music, CRI's "People in the Know," and many of Radio Netherland's interviews and documentaries. It's pretty much a safe bet that if exotic indigenous music is on, I'll stop and listen to it.

Don't feel bad, I never even sent for my QSL! I was busy the day of
the last broadcast, but knowing it would be the last I left my radio
connected to my VCR and recorded the entire thing. Then the tape got
left with my other videotapes and somehow I just never got around to
listening to it! I found it a few years ago but I figured there would
be no point in sending a report that late.

All kidding aside, I will state that it is gratifying to see that classic SW radios can be sold for a great deal of money IF they are in new or like-new shape. It behooves all of us to make sure that we keep our radios in as pristine condition as possible and also to keep all boxes, packing material, manuals, and even orginal advertisements/catalogs, etc. to offer someday to a subsequent purchaser. I have done this and I've told my wife that she should try to sell my radios, hopefully for a good price, after I go to the great "Radio Shack in the Sky."

I sincerely hope the person who buys this Trans-Oceanic truly appreciates it and gives it the care it deserves.

Best,

Joe

The Sony SW100 (excellent radio) does indeed put a voltage on the antenna jack. You will need to place a capacitor in series to block it. However, a Sony AN-LP1 will work just fine but you have to turn it on manually with the SW100.

With one hour to go, the bid is up to $1050.00. Actually, considering the radio is new-old stock (never sold) and its 1958 price was $250.00, this price is quite reasonable. A collector would be getting a bargain as its price, if the radio is kept in its current advertised condition, will only go up, possibly way up.

But it would certainly not be a good buy if this radio were to be intended for everyday use.

Best,

Joe

WWCR has a lot of Alex Jones and Bill Cooper type programming. I believe their website is wwcr.com, you can probably find a program guide there. Lots of lesser-known kooks broadcast on SW. I wonder if WBCQ is still on, they have some quirky stuff produced by former pirates. For the king of the rabid dogs, search the net for clips of Steve Anderson, a militia member who had a pirate station called United Patriot Radio some six years ago. He's now in prison for trying to kill a cop.

Universal has a couple of RP-F11 Toshiba radios for sale too. If you
know someone with a stack of old Monitoring Times magazines check there
for a review. I'm about 90% sure Magne reviewed both.

Which sorta implies an antenna for each frequency you wish to listen to. I don't have room for an antenna farm, so I have to make do with one (external) antenna that works for as many frequencies as possible. I currently have an Eavesdropper C attached to the side of the house, which seems to be working well, BUT I have a homemade dipole which seems to work just as well! (used with a RadioShack DX-394). So far I've logged over 200 frequencies since Christmas with the dipole, since I just hooked up the Eavesdropper today. So far I've picked up another dozen new (to me) freq's on the Eavesdropper.

What I *really* need is the ability to filter receptions; I seem to now be getting a lot of multiple receptions since plugging in the Eavesdropper . . .

In the Era Before Ebay, I owned a NOS Sony transistor radio from 1962. It was spotless in the box with every single accessory. It even had the original 20 cent C type batteries, without a spot of corrosion. I got it from a baby boomer who was given it as an 18th birthday present but for some weird reason had just stashed it on a shelf. Hard to believe that I got just $35 for it when I sold it in 1996.

> Eavesdropper . .

Depends on the type of antenna as some are more broadband than others
but for reception you get the majority of the benefit of a resonate
condition for a band of frequencies. For the most part higher bands
than what the antenna was cut for will be some multiple of it and still
work well so generally you put up the biggest one you have room for.

A dipole will not work well on a band that is 2X the one it is cut for
so avoid that situation and make sure the bands fall on the odd
harmonics.

I'm not sure what you mean by multiple receptions? Some transmissions by a station are simulcast on several frequencies or do you mean that your radio is getting false images of some sort?

If you have the false image problem than you can use a pre-selector. You tune it to the frequency of interest and other signals above and below it are reduced hopefully to the point the image is not heard.

Just discovered that Wordpad can open the icp.exe file whereas Notepad hangs. So you just search for [TEXT] to find the start and then hold the Shift key down while you page down until you hit the French. Copy and paste to a new document and fire away with reformatting, modifying the questions and answers to suit your needs. I daresay it might even be possible to modify the Q&A in the program.

What a great set of questions! Good luck with your adaptations!

That is a very special SATIN backdrop, liberated by RabidoMart while buying the very best in ham equipment at a New Orleans brothel estate sale. It appears many aging hams die while in the premises and any equipment they bring in with them reverts to the management, who cleanse it professionally and tune it right up.....

One night when I was in New Orleans at the French Quarter,there was a guy sitting on the curb in front of Houlihan's and there was loud jazzy music and people were dancing in the street.(Bourbon Street) The guy had an old Zenith Trans-Oceanic transistor radio sitting by him.He would get up every few minutes (he was drunk just like a lot of those other people were drunk too) and dance a few steps and then sit back down on the curb for a few minutes.Oviouslly the radio didn't work because the round dial thingy that is for tuning in stations kept falling out of his radio on the curb.

I turned off the computer. I was listening to BBC English on 5975 when, ten minutes into the broadcast, loud popping noises started going off rapidly causing abrupt changes in signal level, like I reported before. I immediately switched over to the Degen, and I had no further problems for 20 minutes until I turned the radio off. The fact that I experienced the problems ONLY with the Yaesu and not with the Degen rules out BPL or some other external RFI source as the problem. I opened up the Yaesu and cleaned it with compressed air since there was some dust inside, but I still had the problem. It IS the Yaesu that is causing the problem, not the computer or the ethernet connection or BPL or some other external source. I did not experience these problems while tuning through the 15Mhz band earlier today. It appears that once the Yaesu heats up that some connection fails. It appears that continued listening on one frequency for about 10 minutes causes this heating up and failing. Any ideas?

I suspected it wasn't long for this world, so I saved the page on my office computer, and it was still up when I went home for lunch so I snagged another copy there.

Personally, I thought it needed more puffery, private bidding and a story of someone drinking tea with a lemon just like this one while some important historical event took place.

My favorite line in the listing was:

"If the item received is not as expected please CONTACT ME, before leaving negative feedback, as I always try to retaliate."

That pic with the multimeter reminds me of a picture of Scientology founder L. Ron Hubbard hooking up an electrical meter (called an E-meter in the cult) to a tomato via a nail driven through said tomato in an attempt to "audit" the vegetable. (For more info visit xenu.net and search for this pic.)

I like hearing news that I don't hear in the mainstream media, and cultural information such as tourism info, popular food or restaurants, traditions, differences with American culture, and music shows. Right now my favorite stations are Radio Havana Cuba, Radio Taiwan International, and Radio Netherlands. I wish I could reliably receive more European and Middle Eastern broadcasters such as Spain, Sweden, Germany (Deutsche Welle), Israel, and India.

Body handling: HTML body converted to readable text

Hi Brian,

I've only found one local (Seattle area) source for this, and it is at a smallish hardware store chain called McClendons. All the old-timer contractors go there, and they have nuts, bolts, and do-dads that the big chain stores (Lowes, Home Depot) do not carry.

I suggest checking around at the hardware and electrical supply stores in your area that are known to carry a larger stock of items for electricians. This 3M brand "putty" tape is also called "rubber tape" in some circles. It likes to be stretched as you apply it, and you get about 1/3 more coverage due to the stretching. Once you try it, you'll be hooked. I've been impressed with the condition of antenna connections that have been covered 1-2 years with this stuff, even after rugged weather extremes. The only thing it doesn't seem to like is constant exposure to bright sunlight... I notice it starts to weather faster in the summer, and develop little tears and pinholes on the outer layer. The solution, though, is to just use ample wraps so that the layers beneath are "fresh".

You can probably find this 3M tape on the internet, too.

73, Guy

It sounds like your PLL is going out of lock.....could be a faulty
trimmer capacitor that is used to warp the reference crystal on frequency.
Check the phase detector input for the reference frequency.

I have all the packaging for my Degen 1102, including Hong Kong Post envelope with brightly colored Hong Kong stamps and Degen rechargeable batteries (never used). I've been saving boxes/packaging of radios for 15 years in some cases in the hopes that one day they will be worth something. I have a whole garbage bag full of boxes. Everybody thinks I'm crazy. I've seen how much original in box stuff goes for. I have a Westclox Big Ben alarm clock with original box that I bought in January 2001 during California's power crunch to use in case of power failure. The box has been opened, but it's in good shape. The clock was only used a few times. Six months after I bought the clock, Westclox went bankrupt and went out of the clock business. I bet that clock will be worth some money. Oh, and by the way, keep all your receipts too if you can. If you're lucky, the blue ink won't fade over time and leave you with a blank paper. I had receipts from the 80s and 90s that this happened to. The key seems to not expose it to any light, natural or artificial. Thankfully today cash registers are getting away from that damned blue ink. I remember finding receipts that I'd kept for important purchases for 20 years and they were just blank from the breakdown of the ink. I had to throw them out.

3847. Borg Johnson

Newsgroup: rec.radio.shortwave
Date: 2006-02-22 06:31:21 UTC
From: nbates1@webtv.net
Message-ID: <25238-43FC0539-2178@storefull-3218.bay.webtv.net>
Source record: 64147

Just received a new Borg Johnson HS-912R radio this afteroon that I won off ebay last week ($9.95 Delivered). Havent got to play with it much yet but Radio Netherlands booms in loud! Great gobs of Spanish speaking stations, a great many Asian stations, Cuba of course, and what sounded like some German and French speakers. VOA is there, naturally. Seems like it does good for a cheap radio, especially considering Im on the bottom floor of a 2 story apartment complex of 8 big brick buildings. I can barely pick up TV in here with rabbit ears from Nashville (TN) 50 miles away. So, as a casual listener, Im quite happy with it. We like to sit outside at night in warm weather, and I think it will do even better then. Seems this will be a good little knock around radio to take camping, etc.. Runs on 2 D cells, so batteries will last practically forever, I imagine.
Im looking to get a Kaito 1103, but had to delay that a bit as I just bought a (used) boat and have to get that all set up. Beyond that, Im looking at the Emerson MBR-1 as well.
Just wondering if anyone else in here has tried these little Borg Johnson radios?
Thanks,
Nathan

I think they use disappearing ink in hopes that asap, all youll have left is blank paper. Especially stuff with lifetime warranties that requires the receipt to get service. And youre right, light, of any kind, is what fades them out.
Regards,
Nathan

3849. Boost Existing Radio Ferrite Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-02-22 07:04:18 UTC

Source record: 64448

OK, I have an old tapedeck radio. Fairly low end. It has no antenna posts for connection of loop or other antenna. I was wondering... could I set up a line antenna in my apartment, and connect the lead/drop line to the windings inside the radio? The windings around the ferrite rod? Or even the ferrite rod itself if that would help?

I'm guessing that might simply lower/affect the existing reception ability of the ferrite rod & windings. Constructive comments? Thanks.

You started this "flame" jackass, now you go running. You stuck your
big fat nose into a conversation that you had not knowledge about, and
apparently just wanted to throw your opinion in, even though you claim
you don't know anything.

We call assholes like you, "busybody's"!!! If you don't know this
"starsky" or "sparky", why are you defending them?

Again, you try to make assumptions about who I am and what I do, that
you have no basis for, and it makes you look like the idiot that you
are.

Do you poke your nose into other peoples business at work? On the
street? I can only hope so, because eventually someone will blow your
ass away and you won't be an annoyance to the rest of the world.

Now be a good boy and FUCK OFF!

Good morning,

Thanks for the advice...

I have another solution, using the adaptor that comes with my antenna : female stereo jack to plug in the antenna at one end, two alligator clips on the other end, 1 for the signal on the whip, 1 for the ground. I will connect the ground to the "line-out" ground of the radio via a another jack.

It will be a starting point since I won't need to solder anything here...

I keep in mind the capacitor (I've read 470mF on the Yahoo SW100 group) for a later use...

Charly

Hello again,

I just found this schematic of my active antenna :
http://www.drmrx.org/forum/attachment.php?attachmentid=15616&d=1130372787
(beware of wrapped URL)

I seems that (if I can read properly AND if I understand correctly the schematic) the RF signal is delivered to the radio via C1 capacitor...

Another simpler schematic (made by the same person a little earlier) is here and confirms this idea...

Can anyone give me a hint ?

Thanks !

Charly

Thanks everyone for all the help, I really appreciate it! I ordered
"passport to worldband radio" and looked at some of the recievers in
there and read the reviews, which has also helped a lot alot. Waiting
for "shortwave listening guidebook" to come through now as well. I've
gone with DE1102 for now, it was cheap and should peform well enough for
what I want it for. Who knows, maybe I'll look into some better ones in
the future. I'm itching waiting for it to arrive now!!

Anyway thanks again for all the help and advice!

Hello:

Working on a layout for an enclosure, and don't happen to have this on hand.

Would really appreciate it if anyone might please measure up for me the
overall length of a coax "Barrel" type of connector (female on each end) ?

This is the kind you would use it to join two pieces of coax wire together
that have the same sex on each end.

Thanks you very much,
B.

I found a first answer here :
http://www.dai.ed.ac.uk/homes/cam/gadgets/SW100.html

Extract :
"If you want to use a Datong or other active/passive aerial plugged into the external aerial socket then insert a .01uF capacitor in the centre lead to block the power (this remark may not apply to the post-1997 SW100)."

As far as I know : 0.01 uF = 10 nF, so IF the lead-in center connector of the DE/KA31 jack is protected by C1 in the schematic, then the antenna will work with SW100... according to what is said on Chris Malcom's web page.

But is it ????

There isn't any one length. I've checked with the Wireman in the past,
and they had barrel lengths up to 8", for bulkhead UHF connectors.

The smaller length someone else mentioned, 1-1/8" has a space of about
3/8" between the threads at either end, so that would be about the
maximum thickness of the mounting board.

My impression is some do, and some don't.

I'm sure contacting him right away and being polite but firm helps.

But he doesn't refund shipping and handling if you return something and
that can be considerable on a boatanchor.

Anyone can make an honest mistake with a description - but if there's a
sign of intentional misrepresentation (pictures taken from angles to
hide serious damage on a radio described as "collector quality", or
something that's described as working like new but tubes were in wrong
sockets resulting in a fire when you turned it on) the seller should be
refunding for shipping - both ways.

I see nothing wrong with him buying radios that are poorly described and
reselling them with a better description. But he appears he'll buy a
radio thats honestly described warts and all, and then resell it with
phrases like "like new", "I can not fault this" and "collector quality".

His negative and neutral feedback can be entertaining to read.

< http://www.toolhaus.org/cgi-bin/negs?User=radio-mart&Dirn=Received+by >

Unfortunately, since he uses private auctions, you can't read the item
descriptions to evaluate if they were honest.

You can check the feedback of folks who left him negs, and he almost always retaliates.

I have been looking at the R350D, and would like to hear from other
owners their opinions, pros and cons, and whether they think it's
worth the asking price. Also, how about the accessory speaker,
is it worth the $100?

The only thing I can see that I don't immediately like is the LCD
display, it looks kind of shabby to me and looks like it may
be hard to read and low contrast. I really miss the vacuum
flourescent displays, anyone make receivers with them anymore?

Anybody out there own one? Thanks for your help.

Jim

I own an earlier series RX 350. The display is backlit, and is very easy to read. And at least on my rig, it's configurable, to display, or not, some pieces of information according to taste.

The only downside I've encountered is the audio through the internal speaker. Using an external, it's very good.

Performance is quite good. Use is intuitive. Between AR-7030+ and RX-350, the rest of my arsenal gets used sporadically.

Peter, the information commonly encountered on this radio is that (1) it suffers quite a bit from intermod products, and (2) TenTec does not give it the software upgrade support it originally promised. Have you found this to be true?

I enjoy Radio Netherlands programs a lot. They had a great program recently on a 17th-Century mutiny/massacre in Australia, the name escapes me at the moment, which was riveting.

I also enjoy the cultural programming on Voice of Turkey, especially the one on Turkish customs. A recent one on th practice of circumcision was, um, painful to listen to, but fascinating.

I enjoy Iran's Voice of Justice for a chuckle. And I check out the news on Kol Israel every day, unfiltered by American media agendas.

Another fave, though I don't seem to be able to get it much these days, is the pop music programs from Radio Japan. I love listening to any kind of world/folk music which isn't available on the abomination that is American FM radio. Radio Bulgaria and R. Hungary seem to have good music offerings, too.

I would love to see postings of good programs to check out for music...

I will fill the thread all by myself :-) ...

I was wrong... Having a closer look on the schematics and pictures of the internal parts of the antenna revealed that I was missunderstanding the schematics... (I'm not an electronic guy...)

This schematics is concerning the loop amplifier circuit based at the bottom of the loop :
http://www.drmrx.org/forum/attachment.php?attachmentid=15616&d=1130372787

Then we have the "battery box" here :
http://www.drmrx.org/forum/attachment.php?attachmentid=15071&d=1128874226
and also :
http://home.arcor.de/carsten.knuetter/DE31_inside.JPG
http://www.drmrx.org/forum/attachment.php?attachmentid=16399&d=1132431663

OK. I think I will open the box to check if there is really a capacitor and what is its capacitance... Unless someone knows ???

Thanks

Charly

I've found no greater number of birdies, or intermod products with this rig than I have with any other. It's actually pretty quiet. And on my antenna system, devoid of overload. Despite the 5kw regional a couple of miles from here, I have encountered no reception problems caused by cross modulation, intermod, or overload.

I haven't seen any firmware updates since 2002. But, then, I've not found any reason for them, either.

I use it every day, alongside AR-7030+ and have not found it lacking.

I understand that there are those who don't care for it. Then, again, there are many who don't care for the AR-7030 series, either.

cuhulin <

I have an MFJ Noise Canceller that works pretty well and about as advertised. It is not the be-all and end-all, nor do I have the optimal antenna configuration going into it (it works best with two similar antennas at about 1/4 to 1/2 wavelength, or antenna length, apart - I have two dissimilar antennas), but it takes a chunk out of the most offensive noise when I need it.

I'd be willing to try their more expensive model preselector for $69.95; I may just do that one of these days, since a good deal of my grief comes from two or three local 50kW transmitters on MW splattering across 2-6 mHz. Mr. Parfitt has suggested (among other good ideas - bless him) that the transmitters themselves may be to blame, and he may well be right - nonetheless, if I can do something cheap to potentially reduce their effects, it would be worth a try.

I would concur -- I have an Icom 735, and at one time, after being on
for a few minutes it would go blank all across the spectrum -- the
inexpensive plastic trimmer caps for the VFO needed replacing; a
technician replaced them all with new ceramic caps, and that solved
the problem. Sounds like maybe Yaesu is using cheapo trimmer caps,
too. You might check their web site -- see if they have any service
sheets with common problems on your rig. You'll probably have to send
it in for service.

Hi all,

I'm trying to contact either Ron Kelly or Ron Hensley, both of whom worked at Cushman Electronics some years back. If anyone has contact information regarding these gentlemen I would appreciate it.

Thanks,

RoD

I think people like to term this co-channel interference when two
stations broadcast on the same frequency at the same time. This happens
because one station is meant for reception in your area but another
station is meant for another region is making it to you at the same time.

Only solution to this is a more directional antenna where the other
station could be nulled out.

You might want to look on Ebay.

This does not have a power supply and it is not known if it is working
so I would stay away from this one.

Hi Lisa,

I've used a number of MFJ preslectors in conjunction with a number of receivers. The most basic and inexpensive is the MFJ-956, recommended earlier in this thread by David. It's a decent, non-fussy little unit that really doesn't require too much re-tuning as you scan across a given band. The same can largely be said of the MFJ-1045C which I recently picked up from Grove. The 1045C, though, is an active preselector, so you'd have some gain added to your signal. I don't know that you'd necessarily want or need additional gain; I don't have any experience with the receiver you're working with. The 1045C runs off of an AC adapter or can be run off a 9 V battery. The option of running the unit off a battery can be nice if you ever take your receiver out into the field. Note: the 1045C is advertised on the websites of some retailers as being made to accomodate 2 receivers and 2 antennae. I called MFJ a week and a half back (prior to ordering a 1045C) and was informed by a tech at MFJ that the 1045C is designed for one antenna and one receiver: there are no radio 1/2 or antenna 1/2 switches as on the MFJ 1040C preselector (also distinguishing the two: the 1040C does not allow for 9V battery operation, and the 1040C is designed to permit use w/a transceiver). The 1045C looks a lot like the MFJ 1020C active antenna (which is sometimes advertised as being useful as an active preselector); the 1045C and 1020C are similar in appearance/layout of controls. According to the MFJ tech, though, the internals of the two are quite different and the 1045C is to be preferred where the preselection function is concerned.
The other MFJ preselector to consider is the MFJ-1046, which is advertised as a "high dynamic range passive preselector". This was my first preselector and it remains the one I use most often. One thing I particularly like aobut it is that I've not noticed any signal loss in using it. And more often than not, I have no need for any amplification of the signal. This preselector is pretty narrow in its bandwidth, so it often requires a few small tuning adjustments as you tune across a given SW BC band.

In any case, hope some of this helps.

Junius

Well I hope it does what you want it to do. In another thread you spoke
of co-channel interference and a tuner can't help you with that but it
will help you if you have an image problem.

Let's see if we've got this straight...

ZERO of the 9/11 terrorists were from Iraq. Yet, 9/11 was used as an initial reason to invade Iraq.

TWO of the 9/11 terrorists were from the United Arab Emirates and it was shown that UAE banks helped finance 9/11. Yet, the shrub wants to sell control of six of our biggest ports to the UAE???

Whatta great idea! Looks like we'll have to add this to Bunnypants' "Doing a Great Job" list.

Yep, WBBM 780 Chicago (Yes, Eddy Wardo, I know that the transmitter is not
located IN Chicago) recently turned their IBOC back on wiping out my reception
of another station here in Michigan on 790 whose programs I liked on Saturday
mornings.

IBOC = QRM

A friend of mine in NYC can only receive the three strongest IBOC signals,
and can't listen to second adjacent signals (rimshots) that she used to be
able to hear regularly because of IBOC.. that's not DX, it's choice..

I have limited experience with antenna amplifiers, but they tend to add to problems an inexpensive reciever might already have. If the receiver cannot handle large signals in the vacinity of small signals well, then you may simply overload your receiver or introduce signals produced by the amplifier. A preselector helps by limiting what is coming at the reciever from the antenna by narrowing the range of frequencies. That can reduce some noise and interference.

Something guaranteed to reduce interference is to turn off everything in the house that has a computer chip in it as well as motors. This means TV, VCR, DVD, Stereo, Shortwave and scanner receivers, and especially computers and monitors, with an emphasis on monitors. Also, operating on batteries instead of AC current can be very helpful because AC lines can carry a lot of noise. Ground your receiver to a metal rod pounded into the ground as close as possible to the receiver. When I say turn off, what I mean is, pull the plug out of the wall entirely so no connection exists to the AC line whatsoever. Some items may have a small amount of current running so it may start more quickly, TV's especially. Finally, a good antenna cut as close as possible to the band of most interest, balanced and matched properly for impedance and connected to the receiver by low loss coaxial cable directly to the receover.

With the advent of Broadband over Powerlines, cell transmissions and other transmissions that are deliberately pumped down a cable line or telephone line, it is getting very difficult to have good shortwave reception. I question how much people really need to read their email or text message or send photos over cell phones. I think they are an important means of voice communications, but they don't take the place of an office telephone. A reduction in their use would not hurt anyone IMHO.

Image problems are usually cured with a preselector. You need a
steerable antenna for co-channel or adjacent channel interference.

Up here, KSL (1160 Salt Lake City) HD obliterates KTLK (1150 Los
Angeles) for the hour or so every morning that the Sun is up in Utah
and yet to rise in SoCal.

I haven't been able to get any AM stations to get a digital lock on
the BA Recepter HD. I think it may have something to do with the 3
tower directional in the next canyon over.

Maybe your 790 will be digital some day.

Lisa,

Some of their stuff is okay. I've built and enjoyed many of their kits. I've had good luck with their customer service as well; one of the kits I ordered from them was missing a couple of parts. I e-mailed them and they sent the parts out overnight.

Listen to WABC AM 770kHz at 0300UTC. There is no way in hell that the UAE are going to take those ports.

I believe that this is just a planned diplomatic maneuver. It gives the Bush administration some plausibility that they are on UAE side and maintaining a very valuable ally in the M.E. Yet they know full well the deal ain't going anywhere.

Regarding 9/11

Saddam and al-Qaeda

The proof has been right in front of you the entire time. Documents available on the internet, which pass the smell test and are probably genuine, show the link between Saddam and al Qaeda.

http://www.americanthinker.com/articles.php?article_id=5267

The documents referenced in the above article, as well as these http://www.ctc.usma.edu/aq_harmonylist.asp give you a window into this movement, where mujahideen network across Iran, Syria, Palestine, Bosnia, Afghanistan, Europe and elsewhere. The cartoon riots have shown us how skillfully these instigators can find and manipulate fellow travelers among their coreligionists.

Source record: 64378

Young, poor, white 210,000 targeted annually due to bias, statistics show.

WASHINGTON • The most likely victim of a hate crime in the U.S. is a poor, young, white, single urban dweller, according to an analysis of Justice Department statistics collected from between July 2000 and December 2003.

A November report by the Bureau of Justice Statistics detailing a study of 210,000 "hate crimes" a year during that period has gone virtually unreported by the U.S. press.

But it does contain some surprising numbers. While race is, by far, the No. 1 factor cited as the reason for hate crimes, blacks are slightly less likely to be victims and far more likely to be perpetrators, the statistics show.

"The strength and survival of free society and the advance of human knowledge depend on the free exchange of ideas. All ideas are capable of giving offence, and some of the most powerful ideas in human history, such as those of Galileo and Darwin, have given profound religious offence in their time.

The free exchange of ideas depends on freedom of expression and this includes the right to criticise and mock.

We assert and uphold the right of freedom of expression and call on our elected representatives to do the same.

We abhor the fact that people throughout the world live under mortal threat simply for expressing ideas and we call on our elected representatives to protect them from attack and not to give comfort to the forces of intolerance that besiege them."

Mainly repair manuals (I prefer Haynes to Chilton's). Lot's of
coffee table guitar books. Every edition of Reference Data for Radio
Engineers. Video Engineering 3rd Edition. Some Jane's Aircraft books.
Hunter Thompson. Andrei Codrescu. P. J.O'Rourke.

No Al Gore, I'm sorry to say.

I subscribe to New Scientist and the environment thing changes too
fast for a book to get published that isn't already outdated.

So how come you readily accept some 9-11 conspiracy stuff but not
other 9-11 conspiracy stuff? I'm thinking you have a partisan
agenda.

I do not. My only goal is to hasten the inevitable.

There are some reasons for firmware upgrades and Ten-Tec admits to that
much. For instance, the timer doesn't work as advertised, the FAST AGC
setting 'pops' badly and you have to select a 3000 Hz bandwidth in AM
because the system always displays the half width, so 3000 Hz is really
6000Hz, 6000 hz is really 12 Khz and 8000 Hz is really 16 KHz! Get it? Me
neither. That said, the receiver works very well and has built-in noise
reduction and auto notch filters. I use mine alot!

It's an audio DSP noise filter. For instance, it provides random noise reduction and auto-notch filters. These help get rid of backgound noise and heterodynes (squeals). You place the fletr between you receiver and an outboard speaker or computer sound system.

Maybe you could wrap your wire around the ferrite, then ground one end
of the wire and use the rest as a long wire.

Source record: 64317

I have the Yamaha IBOC receiver RX-V4600 as well as an automobile IBOC radio. On FM here in Detroit, there are about a dozen stations transmitting second "HD" programs which are of greater interest to me than the "main" channel since the second channel programs offer music choices that aren't particularly appealing to the huge radio conglomerates (clasical, swing album-cut rock etc).

On AM, IBOC is very problematic because it doesn't really offer anything to the AM broadcaster, and is of minimal use to the listener. The fidelity is quite poor on the three IBOC AM stations that we have here in Detroit. In addition, an EXTREMELY strong signal is required to receive the IBOC "carrier" and as AM fades or experiences weakening signals (such as going under a highway bridge), my car IBOC receiver loses the "digital lock" and annoyingly reverts back to analogue. Thus, the "promise" of distant stations being "cleanly received" in digiital mode is not fulfillable using the IBOC system. I think that the AM IBOC will fade quickly away. The FM IBOC does offer substantial benefits for the listener due to the multicasting possibilities.

Lisa,

As you probably know, it's not uncommon for more than one shortwave station (country) to be using the same frequency at the same time. However if one or more of the stations you're hearing is not actually transmitting on that particular frequency, you have either an *image rejection* problem or *intermodulation* (Google those two topics). The first is caused by insufficient selectivity in the receivers' front-end, while the latter results from not enough dynamic range. A passive preselector should help to reduce both of these problems.

had one and sold it after 1 month. I wouldn't own one just based on my experience with Ten-Tec while I had it. and I thought it had problems, maybe it was the design and maybe it was the unit I had. If TT truely had the legendary support everyone says they have, they would have checked it for me. however even though it was only a couple months old, they wanted $50 to check it out because I wasn't the original owner. that sounds like pathetic customer service on an over $1000 product.

also notice that they are still late with their RX-400. the company is an overall loser. even my friend with the RX-340 doesn't like them

It sounds to me like the family ownership is a bunch of jerks. they can't keep good employees and it shows.

Well, I read up on the other el-cheapo radios like the Bell & Howell, Walgreens Lifelong, etc., and the Borg-Johnson seemed like the best deal for the money.
It has the extended FM range (64Mhz-108Mhz), MW (526Khz-1606Khz), lower TV channels, and SW broken up into 9 bands from 4.70Mhz to 21.95Mhz. Not full continuous coverage, but not bad. Most of what Im getting inside the apartment is in the 4.70Mhz to 10Mhz range. Above that seems pretty quiet, and Im assuming thats because Im in among all these big brick buildings. It doesnt have an external antenna jack, so I plan to get a clip on wire to try outside (well, inside too) when the weather warms up.
I think its a good radio for someone just getting started. Or to just knock around with. Its solid, heavily built. Over a half pound without batteries, like a brick with the 2 D cells installed. Tunes pretty smoothly. Sound quality is fairly good. They seem to be on ebay regularly for about $10 plus $5 or so shipping. Dug around on there and got mine a little cheaper. For the price, Id say it would be hard to beat.
Was just waiting on the Star Trek Borg reference, knew it was coming :o)
Regards,
Nathan

Image is caused by multiple IFs being present. It is an inherent
design quirk in single conversion receivers. Unless a receiver is a
TRF style, it is not expected to have any front-end selectivity beyond
broad bandpass filters.

From www.timewave.com web page:

DSP-9+

The DSP-9+ uses digital signal processing technology to provide optimum filters for random noise reduction, heterodyne elimination and bandpass filtering. Digital Signal Processing (DSP) technology provides superior performance in reducing QRM and QRN.

It works on the audio signal before it gets to your speaker and does a fair job.

I have an MFJ (Analog Devices engine, AFAIK) DSP. While it does
reduce noise it doesn't enhance the ability to ID a station. It is
kind of cool for taking the tones off WWV.

These things really shine when using the digital modes, so I'm told.

YES! The Kiwa mods make a significant positive difference - the AGC/Synch mod is the best, the AGC just works a whole lot better, either fast or slow, and mates really well with the RF gain (play with the two together on some fluttery stations, with the AM synch engaged for selective faders, and you'll see what I mean). The sound is improved, and if you got the filter mods, you'll find those are now eminently useful too.

Craig's mods were about the best bang-for-the-buck SW investment I ever made.

cuhulin<

By this I assume you mean a steerable loop; this can be a good solution
if both are actually on that frequency. That MFJ Noise Canceller I
use, in addition to zapping noise, can also null out offending stations
using two phased antennas. It can kill a pretty strong station well
enough to reveal a much weaker one underneath. The only drawback to
this unit that I can see is that it can only zap one noise source or
station at a time. Multiple interference sources would require
multiple units in series; and I'm not sure what that would do to the
signal either. Others here have tried multiple unit noise canceller
arrays with success.

Joyce Riley mentioned it this morning and said she CANNOT PROVE IT but provided the above reference to the source of the story.

The following is just the introduction.

From Capitol Hill Blue

The Rant
Secret Service agents say Cheney was drunk when he shot lawyer
By DOUG THOMPSON
Feb 22, 2006, 07:35

Secret Service agents guarding Vice President Dick Cheney when he shot Texas lawyer Harry Whittington on a hunting outing two weeks ago say Cheney was "clearly inebriated" at the time of the shooting.

Agents observed several members of the hunting party, including the Vice President, consuming alcohol before and during the hunting expedition, the report notes, and Cheney exhibited "visible signs" of impairment, including slurred speech and erratic actions.

According to those who have talked with the agents and others present at the outing, Cheney was drunk when he gunned down his friend and the day-and-a-half delay in allowing Texas law enforcement officials on the ranch where the shooting occurred gave all members of the hunting party time to sober up.

My recollection is Cheney had 3 DUIs, not two. And those were in the
days when you had to be really drunk to get a DUI conviction.

What a crew. We have Shrub's secret DUI that caused him to get a
special license number in Texas so that the arrest could not be traced.
Then Laura Shrub killed her boyfriend with a car, though the press
never mentioned booze.

I'd take my chances driving with Ted Kennedy before driving with the
Bushies.

Johnny Mnemonic
Oh God! Part 2
Mannequin
Buckaroo Bonzai
Dogma
Undercover Brother
Bruce Almighty
The Mask
The Matrix
It's A Wonderful Life
The Legend of the Drunken Master
Detriot Rock City

Ok that's 12 so just remove Mannequin and Detroit Rock City for 10.

"This was a South Texas hunt," says one White House aide. "Of course
there was drinking. There's always drinking. Lots of it."

One agent at the scene has been placed on administrative leave and
another requested reassignment this week. A memo reportedly written by
one agent has been destroyed, sources said Wednesday afternoon.

Hi Lisa,

I, too, have an MFJ-1046 passive preselector. I use it in conjunction with an MFJ-959C Antenna Tuner/Preamp. As I live in an electrically quiet area about 35 miles WNW of Boston, I mostly do not need either of them, but they help pull out weak signals.

More generally, there really are not a lot of preselectors out there anymore. Try visiting Yahoo Groups shortwave antennas > http://groups.yahoo.com/group/Shortwave-SWL-Antenna/?yguid=257362530

Bob Betts has a preselector construction project that has been much discussed there.

All best,

Ed Bush
